

*Tribute to
Emil Wolf*

*Science and Engineering
Legacy of Physical Optics*

CONTENTS

List of Contributors / xiii

Preface / xvii

Acknowledgment / xxi

Letter from Kristina M. Johnson / xxiii

Chapter 1. Guide, Philosopher, and Friend / 1

Brian J. Thompson

- 1.1 Introduction / 1
- 1.2 Manchester 1955–1959 / 2
- 1.3 1958–1968 Various Locations / 18
- 1.4 The University of Rochester 1968 – / 20
- 1.5 Conclusions / 25
 - Acknowledgments / 26
 - References / 26

Chapter 2. Recollections of Max Born / 29

Emil Wolf

- 2.1 Introduction / 30
- 2.2 The Start of Collaboration / 32
- 2.3 Arrival at Edinburgh / 33
- 2.4 Work at Edinburgh / 34
- 2.5 Born's Revered Teacher / 36
- 2.6 Resistance to New Discoveries / 38
- 2.7 Kind and Compassionate / 40
- 2.8 Life in Retirement / 44
- 2.9 Olivia / 46
 - Acknowledgments / 49
 - References / 49

Chapter 3. What Polarization of Light Is: The Contribution of Emil Wolf / 51

Christian Brosseau

- 3.1 Introduction and Scope / 51
- 3.2 Basic Principles and Some Applications / 60
- 3.3 Additional Remarks and Future Directions / 86
 - Acknowledgments / 89

References /	89
Emil Wolf's Influence /	92

Chapter 4. Electromagnetic Theory of Optical Coherence / 95

Ari T. Friberg

4.1	Introduction /	95
4.2	Fundamental Scalar Results /	96
4.3	Electric Cross-Spectral Density Matrix /	98
4.4	Spectral Changes /	99
4.5	Degree of Polarization /	101
4.6	Coherence of Electromagnetic Fields /	104
4.7	Conclusions /	110
	Acknowledgments /	110
	References /	111

Chapter 5. Physical Optics at Physical Optics Corporation / 115

Tomasz P. Jansson

5.1	Introduction /	115
5.2	Non-Lambertian Diffusers Theory /	116
5.3	Non-Lambertian Diffusers Experiment /	127
5.4	Physical Radiometry at POC /	129
5.5	Optics and Imaging at POC /	133
5.6	Conclusions /	133
	References /	134
	Acknowledgments /	138

Chapter 6. Microscopic Origin of Spatial Coherence and Wolf Shifts / 141

Girish S. Agarwal

6.1	Introduction /	141
6.2	Microscopic Origin of Source Correlations /	143
6.3	Source Correlation-Induced Two-Photon Resonance /	145
6.4	Spatial Coherence and Emission in Presence of a Mirror /	145
6.5	Spatial Coherence-Induced Control of Nonlinear Generation /	146
6.6	Universality of Wolf Shift /	148
6.7	Fluctuating Pulses in a Dispersive Medium /	148
6.8	Conclusions /	149
	References /	149

Chapter 7. Paradigm for a Wave Description of Optical Measurements / 153

Roland Winston, Robert G. Littlejohn, Yupin Sun, and K. A. Snail

7.1	Introduction /	153
7.2	The van Cittert-Zernike Theorem /	154
7.3	Measuring Radiance /	154

- 7.4 Near-Field and Far-Field Limits / 158
- 7.5 A Wave Description of Measurement / 159
- 7.6 Focusing and the Instrument Operator / 160
- 7.7 Measurement by Focusing the Camera on the Source / 162
- 7.8 Experimental Test of Focusing / 163
- 7.9 Conclusions / 165
- References / 166

Chapter 8. Millimeter Wave MMIC Hologram Beam Former / 169

Vladimir A. Manasson and Lev S. Sadovnik

- 8.1 Introduction / 169
- 8.2 Principles of Operation / 169
- Summary / 174
- References / 174
- A Personal Perspective / 176

Chapter 9. Digital Holographic Microscopy / 179

Anthony J. Devaney and Pengyi Guo

- 9.1 Introduction / 179
- 9.2 Conventional Optical Microscopy / 180
- 9.3 Holographic Microscopy / 184
- 9.4 3D Microscopy / 192
- 9.5 Concluding Remarks / 195
- References / 196
- Wolf Anecdotes / 198

Chapter 10. Colored Shadows: Diffractive-Optical Cross-Correlations in the Human Eye: the Missing Link between Physics and Psychology, Newton and Goethe / 201

Norbert Lauinger

- 10.1 Introduction / 202
- 10.2 Diffractive-Optical Hardware of the Human Eye: The Basis for Spectral Transformations, Cross-Correlations, and Adaptations in Color Vision / 203
- 10.3 The Missing Links between Physics and Psychology in the Spectral Domain / 209
- 10.4 Conclusions / 216
- References / 217
- My Encounters with Emil and Marlies Wolf / 218

Chapter 11. The Wolf Effect in Rough Surface Scattering / 223

Zu-Han Gu, Tamara A. Leskova, Alexei A. Maradudin, and Mikael Ciftan

- 11.1 Introduction / 223
- 11.2 Theoretical Study of Changes in the Spectrum of Light Scattered from a Rough Dielectric Film on a Metallic Substrate / 225

- 11.3 Experimental Studies of Spectral Changes in the Scattering of Light from a Rough Dielectric Film on a Metallic Substrate / 238
- 11.4 Conclusions / 241
- Acknowledgments / 241
- References / 242

Chapter 12. Emil Wolf and Optics in the Czech Republic / 247

Jan Peřina

- 12.1 Introduction / 247
- 12.2 Imaging with Partially Coherent Light of Arbitrary Order / 248
- 12.3 Phase Problem / 250
- 12.4 Unified Correlation Tensors / 250
- 12.5 Arbitrary Ordering of Field Operators / 251
- 12.6 Generalized Superposition of Signal and Quantum Noise / 254
- 12.7 Quantum Zeno Effect / 257
- 12.8 Spectral Coherence / 260
- 12.9 Nonlinear Optical Couplers / 260
- 12.10 Conclusions / 262
- Acknowledgment / 262
- References / 262

Chapter 13. Optical Pathlength Spectroscopy / 267

Aristide Dogariu

- 13.1 Introduction / 267
- 13.2 Multiple Light Scattering in Random Media / 268
- 13.3 Using Coherence to Isolate Scattering Orders / 271
- 13.4 Applications of OPS / 276
- 13.5 Conclusions / 284
- References / 285

Chapter 14. The Diffractive Multifocal Focusing Effect / 289

John T. Foley, Renat R. Letfullin, and Henk F. Arnoldus

- 14.1 Introduction / 289
- 14.2 Fresnel Diffraction by a Circular Aperture / 291
- 14.3 Fresnel Diffraction by a Bicomponent System of Apertures / 304
- 14.4 Conclusions / 312
- 14.A Derivation of Equation (7) / 314
- 14.B Derivation of Equations (32) and (33) / 315
- References / 315

Chapter 15. Young's Interference Experiment: The Long and Short of It / 319

Taco D. Visser

- 15.1 The Legacy of Thomas Young / 319
- 15.2 New Physics with Young's Experiment / 321
- 15.3 Field Correlations in the Far Zone of Young's Experiment / 322
- 15.4 Phase Singularities of the Coherence Function
in the Far Field / 326
- 15.5 Phase Singularities of the Poynting Vector near the Screen / 330
- 15.6 Surface Plasmons on the Screen and the Light Transmission
Process / 333
- 15.7 Conclusions / 336
References / 336

Chapter 16. Qualitative Description of the Wolf Effect and Differences between the Doppler and the Wolf Shifts / 339

Valerian I. Tatarskii

- 16.1 Introduction / 339
- 16.2 The Relation between Interference and the Wolf Effect / 340
- 16.3 Physics of the Spectrum Changes in Radiation Problems / 348
- 16.4 Increasing Spatial Coherence in a Process of Propagation / 356
- 16.5 Differences in the Doppler and the Wolf Shifts / 358
- 16.6 Conclusions / 360
Acknowledgments / 361
References / 361

Chapter 17. The Significance of Phase and Information / 363

Michael A. Fiddy and H. John Caulfield

- 17.1 Introduction / 363
- 17.2 Analyticity and Phase / 365
- 17.3 On the Absence of Magic / 368
- 17.4 What is Phase? / 368
- 17.5 Can We Do Without Phase? / 369
- 17.6 The Role of Reference Points / 370
- 17.7 Phase and Information / 374
- 17.8 Conclusions / 374
References / 375

Chapter 18. Local Interface Techniques in Wave-Optical Engineering / 379

Frank Wyrowski and Jari Turunen

- 18.1 Introduction / 379
- 18.2 Problem Statement / 380
- 18.3 Rigorous Solutions of the Propagation Problem / 382

- 18.4 Concept of Local Interface Techniques / 383
- 18.5 Local Elementary Interface Approximations / 384
- 18.6 Local Independent Response Approximations / 393
- 18.7 Extensions to General Fields / 396
- 18.8 Conclusions / 396
 - Acknowledgments / 397
 - References / 397
 - An Honor and a Pleasure / 399

Chapter 19. Backward Thinking: Holography and the Inverse Problem / 401

H. John Caulfield and Michael A. Fiddy

- 19.1 Introduction: Inverse Problems / 401
- 19.2 2D Holograms of 3D Scenes and the Holographic Principle / 403
- 19.3 Paradigms of Holography / 407
- 19.4 The Inverse Scattering Problem and Experimental Data / 408
- 19.5 Resolution, Phase, and Evanescent Waves / 410
- 19.6 Broadening the Concept of Holography / 411
- 19.7 Holography in Other Fields: Ultrasound / 412
- 19.8 Electron Holograms / 415
- 19.9 Conclusions / 415
 - References / 416
 - An Emil Wolf Anecdote / 418

Chapter 20. Several Controversial Topics in Contemporary Optics: Dispersive Pulse Dynamics and the Question of Superluminal Pulse Velocities / 421

Kurt E. Oughstun

- 20.1 Historical Development of Dispersive Wave Theory / 421
- 20.2 Integral Representation of the Propagated Pulse and Causality / 426
- 20.3 Havelock's Classical Group Velocity Approximation / 427
- 20.4 The Modern Asymptotic Theory of Dispersive Optical Pulse Propagation / 430
- 20.5 Accuracy of the Group Velocity Description of Ultrashort Pulse Dynamics / 435
- 20.6 The Question of Superluminal Pulse Velocities / 442
- 20.7 Conclusions / 449
 - Acknowledgment / 449
 - References / 450

Chapter 21. Total Internal Reflection Tomography for Three-Dimensional Subwavelength Imaging / 455

David G. Fischer and P. Scott Carney

- 21.1 Introduction / 455
- 21.2 Conventional Imaging / 456
- 21.3 Evanescent Wave Illumination / 459
- 21.4 Three-Dimensional Near-Field Imaging / 462
- 21.5 Image Reconstruction / 465
- 21.6 Numerical Simulation / 468
- 21.7 Experimental Configuration / 471
- 21.8 Conclusions / 472
- Acknowledgments / 473
- References / 473
- A Personal Note / 474

Chapter 22. Nano-optics: Atoms in the Near Field / 477

Vladilen S. Letokhov

- 22.1 Introduction / 477
- 22.2 Atoms in the Vacuum Near Field of a Nanosphere / 478
- 22.3 Atom Nano-optics: Photon Dots and Photon Holes / 479
- 22.4 Atom Manipulation in the Near Field / 482
- 22.5 Atom in the Near Field and Plasmons / 483
- 22.6 Applications / 485
- Acknowledgments / 487
- References / 487

Chapter 23. Coherence Issues in Flatland / 491

Adolf W. Lohmann, Avi Pe'er, and Asher A. Friesem

- References / 495

Index / 499
