

 WILEY

HANDBOOK OF
Measuring System
DESIGN

EDITORS PETER H. SYDENHAM RICHARD THORN

Volume **1**

Contents

VOLUME 1

Contributors	xi	Section 3: Environmental Factors	85
Preface	xv	16 Reduction of Influence Factors	87
Abbreviations and Acronyms	xvii	<i>Paul P.L. Regtien</i>	
Introduction	xxv	17 EMC and EMI	93
Part 1: Foundations of Measuring	1	<i>Kim R. Fowler</i>	
Section 1: The Process of Measuring	3	Section 4: Feedback in Measuring Systems	99
1 Sophistication of Measurement and its Body of Knowledge	5	18 Nature and Scope of Closed-loop Systems	101
<i>Peter H. Sydenham</i>		<i>Peter H. Sydenham</i>	
2 Organization of Instrument Science	10	19 Dynamic Behavior of Closed-loop Systems	107
<i>Joseph McGhee</i>		<i>Peter H. Sydenham</i>	
3 Measures and Metrics; Their Application	15	20 Closed-loop Sampled Data Systems	112
<i>Peter H. Sydenham</i>		<i>Peter H. Sydenham</i>	
4 Economic Considerations of Measurement	24	21 Nonlinear Closed-loop Systems	118
<i>Peter H. Sydenham</i>		<i>Peter H. Sydenham</i>	
5 Humans in the Real World	33	Section 5: Messaging Theory	125
<i>Joseph McGhee</i>		22 Characteristics and Theory of Knowledge	127
6 Substructure of Human–Machine Systems	38	<i>Luca P. Mari</i>	
<i>Joseph McGhee</i>		23 Principles of Semiotics as Related to Measurement	134
		<i>Luca P. Mari</i>	
Section 2: Measuring Theory and Philosophy	43	24 Principles of Epistemology as Related to Measurement	140
7 Introduction to Measurement Theory and Philosophy	45	<i>Timothy Lindsay John Ferris</i>	
<i>Ludwik Finkelstein</i>		Section 6: Signal Theory	145
8 Formal Theory of Measurement	48	25 Introduction to Signals in Physical Systems	147
<i>Ludwik Finkelstein</i>		<i>Eugen Georg Woschni</i>	
9 Nature and Properties of Measurement	52	26 Signal Classification	149
<i>Ludwik Finkelstein</i>		<i>Eugen Georg Woschni</i>	
10 Extensions of the Representational Theory of Measurement	55	27 Signals in the Frequency Domain	152
<i>Ludwik Finkelstein</i>		<i>Eugen Georg Woschni</i>	
11 Measurement Theory in Physical, Social, and Psychological Science	58	28 Signals in the Time Domain	158
<i>Ludwik Finkelstein</i>		<i>Eugen Georg Woschni</i>	
12 Fuzzy Approaches for Measurement	60	29 Relationship Between Signals in the Time and Frequency Domain	163
<i>Eric Benoit, Laurent Foulloy, Gilles Mauris</i>		<i>Eugen Georg Woschni</i>	
13 Signals, Information and Knowledge, and Meaning	68	30 Statistical Signal Representations	168
<i>Qing Ping Yang</i>		<i>Eugen Georg Woschni</i>	
14 Hierarchical Aspects of Measurement Systems	75	31 Discrete Signal Theory	173
<i>Joseph McGhee</i>		<i>Eugen Georg Woschni</i>	
15 Typical Measurement Systems Architectures	79	32 Geometrical Signal Representations	182
<i>Joseph McGhee</i>		<i>Eugen Georg Woschni</i>	
		33 Coding Theory and its Application to Measurement	186
		<i>Eugen Georg Woschni</i>	

34	Modulation Theory <i>Eugen Georg Woschni</i>	191
----	---	-----

Section 7: Systems Theory 197

35	Systems in the Time Domain <i>Eugen Georg Woschni</i>	199
36	Systems in the Frequency Domain <i>Eugen Georg Woschni</i>	210
37	Relationship Between Systems in the Time and Frequency Domain <i>Eugen Georg Woschni</i>	216
38	Stability Issues <i>Eugen Georg Woschni</i>	222

Section 8: Sources of Information on Measurement 229

39	Characteristics of Data, Information, Knowledge, and Wisdom <i>Timothy Lindsay John Ferris</i>	231
40	Sources of Information <i>Peter H. Sydenham</i>	235
41	Terminology and Classification of Measurement Systems <i>Peter H. Sydenham</i>	239
42	Information Databases of Relevance to Measurement <i>Peter H. Sydenham</i>	246

Part 2: Units, Standards and Calibration 251

Section 1: Standards Supporting Measurement 253

43	Units <i>Brian W. Petley</i>	255
44	Types of Paper Standards and their Purpose <i>Halit Eren</i>	261

Section 2: Calibration 269

45	Calibration Process <i>Halit Eren</i>	271
46	Calibration Interval <i>Peter H. Sydenham</i>	278
47	Internet Calibration <i>Richard A. Dudley</i>	281

Part 3: Error and Uncertainty 285

Section 1: Error and Uncertainty 287

48	Common Sources of Errors in Measurement Systems <i>Dietrich Hofmann</i>	289
49	General Characterization of Systematic and Stochastic Errors <i>Martin Halaj</i>	295
50	Errors in Signal Systems <i>Eugen Georg Woschni</i>	304
51	Errors in Digital Signal Systems <i>Luca P. Mari</i>	314
52	Error Models, Error Budgets and their Calculation <i>Rudolf Palenčár</i>	318
53	Calculation and Treatment of Errors <i>Joseph McGhee</i>	328
54	Explanation of Key Error and Uncertainty Concepts and Terms <i>Luca P. Mari</i>	331

55	Uncertainty Determination <i>Joseph McGhee</i>	336
----	---	-----

Part 4: Measuring System Behavior 345

Section 1: Measuring System Specification 347

56	Transfer Characteristics of Instrument Stages <i>Peter H. Sydenham</i>	349
57	Static Considerations of General Instrumentation <i>Peter H. Sydenham</i>	354
58	Description of Accuracy, Linearity, and Drift <i>Peter H. Sydenham</i>	359
59	Introduction to the Dynamic Regime of Measurement Systems <i>Peter H. Sydenham</i>	363
60	Zero-order System Dynamics <i>Peter H. Sydenham</i>	367
61	First-order System Dynamics <i>Peter H. Sydenham</i>	371
62	Second-order System Dynamics <i>Peter H. Sydenham</i>	378

VOLUME 2

Part 5: Measuring System Design 385

Section 1: Engineering a Measuring System 387

63	Outline of Systems Thinking <i>Peter H. Sydenham</i>	389
64	Executing A Measuring System Design <i>Peter H. Sydenham</i>	399
65	Life Cycle Concept <i>Floyd Guyton Patterson, Jr</i>	411
66	Phases of System Life Cycle <i>Kim R. Fowler</i>	416
67	Principle of Concept of Operations (ConOps) <i>Jack Ring</i>	422
68	Setting the System Boundaries <i>Joseph McGhee</i>	426
69	Requirements Allocation <i>Andrew Kusiak, Fang Qin</i>	430

Section 2: Design Methodologies 437

70	Measuring System Design Methodologies <i>Ludwik Finkelstein</i>	439
71	Modeling Methodology <i>Peter H. Sydenham</i>	443
72	Mathematical Methods of Optimization <i>Halit Eren</i>	452

Section 3: Electronic and Electrical Regime 457

73	Overview of Electrical and Electronic Technique <i>Peter H. Sydenham</i>	459
74	Basic Electronic Components <i>Peter H. Sydenham</i>	469
75	Electronic System Building Blocks <i>Peter H. Sydenham</i>	476
76	Electronic Systems Design <i>Peter H. Sydenham</i>	483

77	Limits of Detection in Electronic Systems <i>Peter H. Sydenham</i>	490	Part 6: Modeling Measuring Systems	677
78	Embedded Systems <i>Timothy Wilmschurst</i>	493	Section 1: Modeling Measuring Systems	679
79	Testing Electronic Systems <i>Patrick D.T. O'Connor</i>	499	104 Models of the Measurement Process <i>Luca P. Mari</i>	681
Section 4: Fine Mechanical Regime	505	105 Modeling with LabVIEW™ <i>Wiesław Tlaczala</i>	685	
80 Principles of Fine Mechanics – Kinematic and Elastic Designs <i>Peter H. Sydenham</i>	507	106 Virtual Instrumentation in Physics <i>Wiesław Tlaczala</i>	695	
81 Principles of Fine Mechanics – Systems Considerations <i>Peter H. Sydenham</i>	515	Part 7: Elements: A – Sensors	703	
82 Kinematical Regime – Members and Linkages <i>Peter H. Sydenham</i>	520	Section 1: Sensor Fundamentals	705	
83 Kinematical Regime – Fasteners, Bearings <i>Peter H. Sydenham</i>	527	107 Principles of Sensor Science <i>Joseph McGhee</i>	707	
84 Kinematical Regime – Rotary Motion <i>Peter H. Sydenham</i>	533	108 Transducer Fundamentals <i>Paul P.L. Regtien</i>	717	
85 Elastic Regime of Design – Design Principles <i>Peter H. Sydenham</i>	540	109 Structure and Energy in Sensor Systems <i>Joseph McGhee</i>	725	
86 Elastic Regime of Design – Spring Systems <i>Peter H. Sydenham</i>	548	110 Signal/Energy Matrix Modeling <i>Joseph McGhee</i>	737	
87 Elastic Regime of Design – Plates and Bimorphs <i>Peter H. Sydenham</i>	556	111 Classification of Sensors <i>Joseph McGhee</i>	741	
88 Error Sources in Fine Mechanics <i>Peter H. Sydenham</i>	561	112 Systematic Description of Sensors <i>Paul P.L. Regtien</i>	751	
Section 5: Visible Radiation Regime	571	113 Force-feedback Sensors <i>Barry E. Jones</i>	758	
89 Optical Materials <i>Pak L. Chu</i>	573	Section 2: The Sensing Interface	765	
90 Optical Elements <i>Pak L. Chu</i>	579	114 Models of the Sensor Interface <i>Qing Ping Yang</i>	767	
91 Light Sources and Detectors <i>Mirosław Jonasz</i>	593	115 Designing the Sensor Interface <i>Qing Ping Yang</i>	773	
92 Optical Measuring Instruments <i>Peter H. Sydenham</i>	603	116 Selection of Sensors <i>Paul P.L. Regtien</i>	778	
93 Testing Optical and Other Radiation Systems <i>Alan J. Cormier</i>	610	117 Materials in Measuring Systems <i>Peter H. Sydenham</i>	781	
Section 6: Human Factors Engineering	617	118 Ultrasonic Sensors <i>Peter J. Lesniewski</i>	791	
94 Human Factors Engineering <i>Nicholas I. Beagley</i>	619	119 Ultrasonic Instrumentation Principles <i>Lawrence C. Lynnworth</i>	802	
95 Human–Machine Interface <i>Nicholas I. Beagley</i>	624	120 Ultrasonic Instrumentation Design <i>Lawrence C. Lynnworth</i>	810	
96 The Domains of Human Factors Integration <i>Nicholas I. Beagley</i>	628	Part 8: Elements: B – Signal Conditioning	823	
97 Design Methodology <i>Nicholas I. Beagley</i>	633	Section 1: Analog Signal Conditioning	825	
Section 7: Quality in Measuring Systems	637	121 Signals in the Presence of Noise <i>Richard Burdett</i>	827	
98 Reliability and Maintainability <i>Patrick D.T. O'Connor</i>	639	122 Operational Amplifiers <i>Joseph McGhee</i>	831	
99 Safety Organization <i>Peter H. Sydenham</i>	645	123 Instrumentation Amplifiers <i>Joseph McGhee</i>	840	
100 Safety Analysis Methods <i>Peter H. Sydenham</i>	651	124 Specialized Amplifiers for Measurement Systems <i>Joseph McGhee</i>	850	
101 Assessing and Demonstrating Safety <i>Peter H. Sydenham</i>	658	125 Outline of Purpose of Analog Data Filters <i>Joseph McGhee</i>	860	
102 Introduction to the Legal Process <i>Christopher Sweet</i>	666	Section 2: Electrical Bridges	865	
103 Legal Liability Issues for Designers – A Case Study <i>Christopher Sweet</i>	671	126 Electrical Bridge Circuits – Basic Information <i>Zygmunt L. Warsza</i>	867	

127	Unbalanced DC Bridges <i>Zygmunt L. Warsza</i>	878	151	Finite Impulse Response (FIR) Digital Filters <i>Joseph McGhee</i>	1027
Section 3: AI Signal Processing Techniques 891			Section 3: Computers in Measuring Systems 1031		
128	Nature and Scope of AI Techniques <i>Ajith Abraham</i>	893	152	Fundamentals of the Stored Program Digital Computer <i>Joseph McGhee</i>	1033
129	Artificial Neural Networks <i>Ajith Abraham</i>	901	153	Single Address Instruction Microcomputer <i>Joseph McGhee</i>	1036
130	Rule-based Expert Systems <i>Ajith Abraham</i>	909	154	Internal Operation of the Microprocessor <i>Joseph McGhee</i>	1039
131	Evolutionary Computation <i>Ajith Abraham</i>	920	155	External Operation of the Microprocessor <i>Joseph McGhee</i>	1041
VOLUME 3			156	Memory Management in the Microprocessor <i>Joseph McGhee</i>	1045
Part 9: Elements: C – Data Acquisition and Processing Systems 933			157	Data Acceleration in Computers <i>Joseph McGhee</i>	1049
Section 1: DAS Components 935			158	Microcontroller Systems <i>Joseph McGhee</i>	1056
132	Data Acquisition Systems (DAS) in General <i>Gerd Wöstenkühler</i>	937	159	Designing and Building Software for Measuring Systems <i>Joseph E. Kasser</i>	1062
133	Amplifiers and Filters for DAS <i>Gerd Wöstenkühler</i>	940	Section 4: Intelligent Measuring Systems 1069		
134	Analog Multiplexers <i>Gerd Wöstenkühler</i>	943	160	Smart Sensor System Features <i>Peter H. Sydenham</i>	1071
135	Sample-hold Circuits <i>Gerd Wöstenkühler</i>	946	161	Knowledge-based Systems <i>Dietrich Hofmann</i>	1080
136	Quantizing Theory Relevant to DAS <i>Gerd Wöstenkühler</i>	949	Part 10: Elements: D – MEMS 1087		
137	Coding for Data Converters <i>Gerd Wöstenkühler</i>	951	Section 1: Micro Electro Mechanical Systems (MEMS) 1089		
138	Sampling Theory Relevant to DAS <i>Gerd Wöstenkühler</i>	955	162	Principles of MEMS <i>Janusz Bryzek</i>	1091
139	Analog-to-Digital (A/D) Converters <i>Gerd Wöstenkühler</i>	959	163	Uses and Benefits of MEMS <i>Janusz Bryzek</i>	1097
140	Integrating Type A/D Converters <i>Gerd Wöstenkühler</i>	962	164	Principles of MEMS Actuators <i>Janusz Bryzek</i>	1103
141	Digital-to-Analog (D/A) Converters <i>Gerd Wöstenkühler</i>	965	Part 11: Elements: E – Communication in Measuring Systems 1109		
Section 2: Digital Signal Processing (DSP) 971			Section 1: Distributed and Networked Measuring Systems 1111		
142	Z-transforms <i>Amar Bousbaine</i>	973	165	Introduction to Networked Instrumentation <i>Joseph McGhee</i>	1113
143	DFT and FFTs <i>Gerd Wöstenkühler</i>	981	166	Instrument Interconnection <i>Joseph McGhee</i>	1119
144	DSP Chip Sets <i>Iain Paterson-Stephens</i>	989	167	Asynchronous and Synchronous Interface Protocols <i>Joseph McGhee</i>	1121
145	DSP Tools <i>Iain Paterson-Stephens</i>	997	168	RS 232 and EIA/TIA 232 Serial Interface <i>Joseph McGhee</i>	1124
146	Principles of DSP Hardware Design <i>Iain Paterson-Stephens</i>	1003	169	Voltage and Current Loop Transmission <i>Joseph McGhee</i>	1130
147	Ideal Digital Filter Approximation <i>Joseph McGhee</i>	1008	170	IEEE-488 Instrumentation Bus <i>Joseph McGhee</i>	1135
148	General Performance of the Digital Filter <i>Joseph McGhee</i>	1013	171	Local Area (LANs) and Wide Area Networks (WANs) <i>Joseph McGhee</i>	1142
149	Low-, High-, and Band-pass Digital Filters <i>Joseph McGhee</i>	1016	172	Fieldbus Systems <i>Halit Eren</i>	1147
150	Finite Infinite Impulse Response (IIR) Digital Filters <i>Joseph McGhee</i>	1019	173	Scheduling Systems <i>Emil Michta</i>	1154

Part 12: Elements: F – Signals and Noise	1163	196 Thermocouple Temperature Sensors	1315
		<i>Jacek Kucharski</i>	
Section 1: Noise and Interference	1165	197 Metallic Resistance Temperature Detectors (RTDs)	1322
174 Typical Signals Arising in Measurement	1167	<i>Dietrich Hofmann</i>	
<i>Eugen Georg Woschni</i>		198 Calibration and Standards in Temperature Measurement	1331
175 Comparison of Analog and Digital Signal Handling	1171	<i>D.R. White</i>	
<i>Joseph McGhee</i>		Section 4: Time and Frequency Measurement	1339
176 Signals and Signal-to-noise Ratio	1174	199 Characteristics of Time and Frequency Measurement	1341
<i>Richard Burdett</i>		<i>Michael A. Lombardi</i>	
177 Grounding and Shielding	1175	200 Calibrations and Standards in Time Measurement	1346
<i>Kim R. Fowler</i>		<i>Michael A. Lombardi</i>	
178 Noise Matching and Preamplifier Selection	1182	Section 5: Electrical Quantities Measurement	1351
<i>Richard Burdett</i>		201 Voltage Measurement	1353
179 Input Connections; Grounding and Shielding	1186	<i>Halit Eren</i>	
<i>Richard Burdett</i>		202 Current Measurement	1362
Section 2: Signal Recovery in the Presence of Noise	1191	<i>Halit Eren</i>	
180 Bandwidth Reduction of Baseband DC Signals	1193	203 Resistance Measurement	1371
<i>Richard Burdett</i>		<i>Halit Eren</i>	
181 Amplitude Modulated Signals: The Lock-in Amplifier	1197	204 Capacitance and Inductance Measurement	1379
<i>Richard Burdett</i>		<i>Consolatina Liguori</i>	
182 Boxcar and Signal Averagers	1209	Section 6: Velocity and Acceleration	1389
<i>Richard Burdett</i>		205 Theory of Vibration Measurement	1391
183 Correlators in Signal Extraction	1217	<i>Peter H. Sydenham</i>	
<i>Richard Burdett</i>		206 Practice of Vibration Measurement	1398
184 Photon Counting	1220	<i>Peter H. Sydenham</i>	
<i>Richard Burdett</i>		207 Acceleration Measurement	1408
185 Pulse Height Discrimination, Ratemeters and Pileup	1223	<i>Peter H. Sydenham</i>	
<i>Richard Burdett</i>		208 Amplitude and Velocity Measurement	1414
186 The Family of Signal Recovery Methods	1227	<i>Peter H. Sydenham</i>	
<i>Richard Burdett</i>		Section 7: Chemical Properties	1419
Part 13: Common Measurands	1229	209 Characteristics of Chemical Measurements	1421
Section 1: Flow Measurement	1231	<i>Peter H. Sydenham</i>	
187 Flowmeter Selection and Application	1233	210 Optical Transducers for Chemical Measurements	1427
<i>Michael Reader-Harris</i>		<i>Ashutosh Sharma</i>	
188 Differential Pressure (DP) Flowmeters	1238	211 Mass Spectrometry	1435
<i>Michael Reader-Harris</i>		<i>Peter H. Sydenham</i>	
189 Basic Principles of Flow Measurement	1248	212 Chromatography	1438
<i>Richard Thorn</i>		<i>Brett Paull</i>	
190 Calibration and Standards in Flow Measurement	1256	213 Electrochemical Measurements	1445
<i>Richard Paton</i>		<i>David Davey</i>	
Section 2: Displacement and Angle Measurement	1261	Part 14: Test and Evaluation	1455
191 Displacement and Angle Sensors Performance and Selection	1263	Section 1: Measurement Testing Systems	1457
<i>Halit Eren</i>		214 Accelerated Testing	1459
192 Strain Sensors	1268	<i>Patrick D.T. O'Connor</i>	
<i>Peter H. Sydenham</i>		215 Automatic Test Systems	1464
193 Specialty Displacement and Angle Sensors	1281	<i>Patrick D.T. O'Connor</i>	
<i>Halit Eren</i>		216 Test Facilities	1467
194 Large-scale Metrology	1287	<i>Patrick D.T. O'Connor</i>	
<i>Stephen Kyle</i>		217 Instrument Evaluation	1473
Section 3: Temperature Measurement	1305	<i>Steve Cork</i>	
195 Characteristics of Temperature Measurement	1307	Subject Index	I
<i>Joseph McGhee</i>
