Contents

Foreword	xi
Preface	xv
 I FUNDAMENTAL THEORY	 1
1 Introduction	3
1.1 Background	3
1.2 Harmonics in Power Systems	4
1.3 Power Quality	5
1.4 Custom Power	5
1.5 Engineering Tools and Methods	6
1.5.1 Software tools	6
1.5.2 Hardware tools	7
1.5.3 Hardware-in-the-loop	7
1.6 Avenues of Research on Harmonic Analysis	8
1.7 Bibliography	8
 2 Orthogonal Series Expansions	 11
2.1 Introduction	11
2.2 Orthogonal Functions	11
2.3 Periodic Functions	12
2.3.1 Even and odd functions	13
2.3.2 Half-wave symmetry	14
2.3.3 Quarter-wave symmetry	15
2.3.4 Hidden symmetry	16
2.4 The Fourier Series	16
2.4.1 Trigonometric form	16
2.4.2 Exponential form	18
2.4.3 Summary of waveform symmetry in a Fourier series	20
2.5 The Fourier Transform	20
2.5.1 Fundamental equation	20
2.5.2 Discrete Fourier transform	21
2.5.3 Fast Fourier transform	25

2.6	Convolutions	26
2.6.1	Time convolutions	26
2.6.2	Frequency convolutions	27
2.7	The Hartley Transform	28
2.7.1	From Fourier to Hartley series	28
2.7.2	Properties of the $\text{cas}(\cdot)$ function	29
2.7.3	The Hartley transform	29
2.7.4	Properties of the Hartley transform	30
2.7.5	Discrete Hartley transform	30
2.7.6	Fast Hartley transform	32
2.8	Summary	34
2.9	Bibliography	34
3	Electric Circuit Analysis Under Non-sinusoidal Conditions	35
3.1	Introduction	35
3.2	Key Periodic Electrical Relations	36
3.2.1	Non-sinusoidal functions	38
3.2.2	Sinusoidal functions	43
3.2.3	Symmetry and power definitions	46
3.3	Phasor Analysis	48
3.4	Symmetrical Components	50
3.4.1	Three-phase sinusoidal systems	51
3.4.2	Three-phase non-sinusoidal systems	51
3.5	Linear Circuit Analysis	53
3.5.1	Harmonic propagation studies in large networks	55
3.6	Passive Filters	64
3.6.1	Single-tuned first-order filters	65
3.6.2	High-pass second-order filters	65
3.6.3	Single-tuned first-order harmonic filter design	66
3.7	Summary	72
3.8	Bibliography	72
4	Harmonic Evaluation of Non-linear Functions	75
4.1	Introduction	75
4.2	Polynomial Evaluation by Hand Calculations	76
4.3	Convolutions in the Complex Fourier Harmonic Domain	79
4.3.1	Polynomial evaluation	79
4.3.2	Rational polynomial evaluation	84
4.3.3	Switching function evaluation	87
4.4	Numeric Evaluation of Non-linear Functions	89
4.5	Analytical Approximation of Saturation	89
4.5.1	Piecewise linear approximation	90
4.5.2	Rational fraction approximation	90
4.5.3	Hyperbolic approximation	91
4.5.4	Cubic splines interpolation	92
4.5.5	Simple polynomial approximation	94
4.6	Summary	97

4.7	Bibliography	97
5	Linearisation in Harmonic Domain	99
5.1	Introduction	99
5.2	Linearisation of a Simple Non-linear Relation	99
5.3	Dynamic Relations	102
5.3.1	Norton and Thévenin circuit equivalents	104
5.3.2	Linear relations in dynamic elements	107
5.4	Linear Relations	108
5.5	Multi-variable Relations	115
5.6	An Application to an Industrial Test Case	119
5.7	Summary	123
5.8	Bibliography	124
6	Real Fourier Harmonic Domain	125
6.1	Introduction	125
6.2	Direct Frequency Domain Evaluations	125
6.3	Linearisation in the Real Fourier Harmonic Domain	129
6.4	Dynamic Relations	131
6.5	Linear Elements	132
6.6	Summary	136
6.7	Bibliography	136
7	Hartley Harmonic Domain	137
7.1	Introduction	137
7.2	Direct Frequency Domain Evaluations	137
7.3	Linearisation in the Hartley Harmonic Domain	141
7.4	Dynamic Relations	143
7.5	Linear Elements	144
7.6	Computational Advantage	148
7.7	General Remarks about the Hartley Harmonic Domain	149
7.8	Summary	149
7.9	Bibliography	150
8	Iterative Solutions of Non-linear Power Plant Components	151
8.1	Introduction	151
8.2	Harmonic Domain Newton–Raphson Techniques	152
8.2.1	Point-by-point evaluation of the non-linear characteristic	155
8.3	The Non-linear Inductor in the Harmonic Domain	156
8.4	Harmonic Domain Convergence Characteristics	159
8.4.1	Full Newton–Raphson method	167
8.4.2	Single-valued Newton–Raphson method	168
8.4.3	Gauss–Seidel method	168
8.4.4	Quasi-Newton–Raphson method	169
8.5	Summary	169
8.6	Bibliography	170

II	CONVENTIONAL POWER PLANT EQUIPMENT	173
9	Synchronous Generator	175
9.1	Introduction	175
9.2	Synchronous Machine under Non-sinusoidal Conditions	175
9.2.1	Machine's harmonic admittance matrix in the $dq0$ axes	176
9.2.2	Machine's harmonic admittance matrix in the $\alpha\beta\gamma$ axes	179
9.2.3	Machine's harmonic admittance matrix in abc axes	183
9.3	Saturation in the Synchronous Machine	185
9.4	Experimental Results	190
9.5	Summary	190
9.6	Bibliography	192
10	Transmission Lines	193
10.1	Introduction	193
10.2	Evaluation of Lumped Parameters	194
10.2.1	Matrix of potential coefficients $\mathbf{P}$	194
10.2.2	Impedance matrix $\mathbf{Z}_{G-E}$	195
10.2.3	Skin effect impedance matrix $\mathbf{Z}_{\text{Skin}}$	197
10.2.4	Reduced equivalent matrices $\mathbf{Z}_{abc}$ and $\mathbf{Y}_{abc}$	199
10.2.5	500 kV power transmission line configuration	201
10.3	Evaluation of Distributed Parameters	202
10.4	Harmonic Voltage Wave Propagation in Transmission Lines	206
10.5	Transmission Line Transpositions	209
10.6	VAR Compensation	214
10.6.1	Network nodal analysis	214
10.7	Single-phase Transmission Line Equivalents	216
10.8	Summary	223
10.9	Bibliography	224
11	Magnetic Non-linearities	227
11.1	Introduction	227
11.2	Inrush Currents	228
11.3	Single-phase Transformer	231
11.3.1	Lattice equivalent circuit representation	232
11.3.2	Transformer parameters in per unit values	235
11.4	Three-phase Transformer Bank	236
11.5	Laminated Iron Cores	243
11.5.1	Modelling of cores	243
11.5.2	Modelling of hysteresis	251
11.5.3	Calculation of iron losses	251
11.5.4	External system	252
11.6	Summary	253
11.7	Bibliography	253
12	Electric Arcs	255
12.1	Introduction	255

12.2 Electric Arc Furnaces: Overview	256
12.3 Electric Furnace Installations	258
12.4 Electric Arc Furnace Modelling	259
12.4.1 Static electric arc model	260
12.5 Harmonic Domain Equation of the Electric Arc	261
12.5.1 Dynamic characteristic	262
12.5.2 Static characteristic	265
12.6 Electric Arc Lamps: Overview	266
12.7 Arc Discharge Lamps	269
12.8 Summary	271
12.9 Bibliography	272

III POWER ELECTRONICS EQUIPMENT 273

13 Static VAR Compensator	275
13.1 Introduction	275
13.2 Single-phase TCR Basic Operation	277
13.2.1 Voltage zero-crossing reference	279
13.2.2 Thyristor turn-on and turn-off	282
13.2.3 Single-phase SVC model	286
13.3 Three-phase TCR Modelling	287
13.4 Summary	295
13.5 Bibliography	296
14 Thyristor-controlled Series Compensator	299
14.1 Introduction	299
14.2 TCSC Operation	302
14.2.1 TCSC model	302
14.3 TCSC Impedance Response	306
14.4 Summary	312
14.5 Bibliography	312
15 Three-phase, Six-pulse Rectifier	315
15.1 Introduction	315
15.2 Rectifier Operation Using Switching Functions	318
15.2.1 Effect of the AC side inductance	319
15.2.2 Thyristor switching functions	322
15.3 Model in the Harmonic Domain	322
15.4 Harmonics in Electrical Power Networks	329
15.4.1 Harmonics produced by single-phase converters	329
15.4.2 Harmonics produced by three-phase converters	331
15.4.3 Harmonics in distribution systems	333
15.5 Summary	334
15.6 Bibliography	335
16 Static Compensator with PWM Converters	337

16.1	Introduction	337
16.2	STATCOM Operation	338
16.3	STATCOM Based on PWM Converters	338
16.4	Analytical Model	339
16.5	PWM Converter Switching Functions	342
16.5.1	Selective harmonic elimination	342
16.5.2	Multi-module PWM technique	345
16.6	Implementation of the Thévenin Equivalent of the STATCOM	348
16.6.1	Analysis of the equivalent model	349
16.7	Active Filters	353
16.7.1	Basic principles of operation	353
16.7.2	Shunt active filter	353
16.7.3	Series active filter	357
16.7.4	Hybrid filter	357
16.7.5	Universal active filter	357
16.8	Summary	358
16.9	Bibliography	359
Index		361
