

# RUMEN MICROBIOLOGY

*Burk A Dehority*

NOTTINGHAM  
University Press

# CONTENTS

Preface	v
1 Herbivores: animals adapted through microbial fermentation in the gastrointestinal tract to feed solely on plant materials	1
2 Gross anatomy, physiology and environment of the ruminant stomach	19
3 Classification and morphology of rumen protozoa	43
4 Establishment, numbers and diurnal changes in the concentration of rumen protozoa	73
5 Metabolism, nutrition and growth of rumen protozoa	101
6 Distribution, specificity and role of the rumen protozoa	129
7 Rumen bacteria - history, methods of <i>in vitro</i> cultivation, and discussion of mixed culture fermentations	157
8 Cellulose digesting rumen bacteria	177
9 Species of rumen bacteria active in the fermentation of hemicellulose	209
10 Pectin-fermenting species of rumen bacteria	229
11 Starch digesters, other less numerous species and facultative anaerobes in the rumen	243
12 Numbers, factors affecting the population and distribution of rumen bacteria	265
13 Rumen fungi	267
14 Additional metabolic activities and interactions among rumen microorganisms	321
Appendix	347
Index	365
