

GERALD G MARTEN

# Human Ecology

**BASIC CONCEPTS FOR  
SUSTAINABLE DEVELOPMENT**

**FOREWORD BY MAURICE STRONG**

**Chairman of the Earth Council and Secretary General of the  
1992 Earth Summit**

<b>1 Introduction</b>	<b>1</b>
What is human ecology?	1
Sustainable development	7
Organization of this book	11
<b>2 Populations and feedback systems</b>	<b>14</b>
Exponential population growth	14
Positive feedback	17
Negative feedback	20
Population regulation	21
The practical significance of positive and negative feedback	24
<b>3 Human population</b>	<b>26</b>
Human population history	27
Social mechanisms of population regulation	35
The population explosion and quality of life	38
<b>4 Ecosystems and social systems as complex adaptive systems</b>	<b>42</b>
Hierarchical organization and emergent properties	43
Self-organization	47
Stability domains	52
Complex system cycles	56
<b>5 Ecosystem organization</b>	<b>60</b>
Coadaptation	61
Ecosystem design	62
Ecosystem homeostasis	63

	Comparison of natural, agricultural and urban ecosystems	65
	Landscape mosaics	71
<b>6</b>	<b>Ecological succession</b>	<b>76</b>
	Ecological succession	77
	Human-induced succession	83
	Managing succession	88
<b>7</b>	<b>Coevolution and coadaptation of human social systems and ecosystems</b>	<b>96</b>
	Coadaptation in traditional social systems	97
	Coevolution of the social system and ecosystem from traditional to modern agriculture	100
<b>8</b>	<b>Ecosystem services</b>	<b>106</b>
	Material cycling and energy flow	107
	Ecosystem services	114
	The relation between ecosystem services and intensity of use	115
	The fallacy that economic supply and demand protect natural resources from overexploitation	118
<b>9</b>	<b>Perceptions of nature</b>	<b>121</b>
	Common perceptions of nature	122
	Attitudes of religions toward nature	125
	Notes of caution about romanticizing nature and traditional social systems	133
<b>10</b>	<b>Unsustainable human-ecosystem interaction</b>	<b>136</b>
	Human migrations	137
	New technologies	141
	Portable capital in a free market economy	142
	Tragedy of the commons	143
	Large inputs to agricultural and urban ecosystems	145
	Urbanization and alienation from nature	146
	The rise and fall of complex societies	147
	Wishful thinking and the precautionary principle	152
<b>11</b>	<b>Sustainable human-ecosystem interaction</b>	<b>157</b>
	Human social institutions and sustainable use of common property resources	158
	Coexistence of urban ecosystems with nature	165
	Resilience and sustainable development	169
	Adaptive development	174

<b>12</b>	<b>Examples of ecologically sustainable development</b>	<b>183</b>
	Dengue hemorrhagic fever, mosquitoes and copepods: an example of eco-technology for sustainable development	184
	The Barataria-Terrebonne National Estuary Program: an example of regional environmental management	196
	<i>Glossary</i>	215
	<i>Further reading</i>	224
	<i>Index</i>	229
