

BUNGALE S. TARANATH Ph.D., S.E.

WIND and EARTHQUAKE RESISTANT BUILDINGS

STRUCTURAL ANALYSIS AND DESIGN

ASCE 7-02, 2003 IBC, AISC 341-02, ACI 318-02,
FEMA 350, FEMA 356, NFPA 5000, 1997 UBC

Contents

Chapter 1. Wind Loads	1
1.1. Design Considerations	1
1.2. Nature of Wind	2
1.2.1. Types of wind	2
1.3. Characteristics of Wind	3
1.3.1. Variation of Wind Velocity with Height	3
1.3.2. Wind Turbulence	4
1.3.3. Probabilistic Approach	5
1.3.4. Vortex Shedding	7
1.3.5. Dynamic Nature of Wind	10
1.3.6. Cladding Pressures	10
1.4. Code Provisions for Wind Loads	13
1.4.1. Uniform Building Code, 1997: Wind Load Provisions	15
1.4.2. ASCE 7-02: Wind Load Provisions	24
1.4.3. National Building Code of Canada (NBCC 1995): Wind Load Provisions	68
1.5. Wind-Tunnel Engineering	83
1.5.1. Rigid Model	84
1.5.2. Aeroelastic Study	86
1.5.3. High-Frequency Base Force Balance Model	91
1.5.4. Pedestrian Wind Studies	93
1.5.5. Motion Perception: Human Response to Building Motions	97
Chapter 2. Seismic Design	99
2.1. Building Behavior	101
2.1.1. Influence of Soil	102
2.1.2. Damping	103
2.1.3. Building Motions and Deflections	104
2.1.4. Building Drift	104
2.2. Seismic Design Concept	104
2.2.1. Structural Response	105
2.2.2. Load Path	105
2.2.3. Demands of Earthquake Motions	106
2.2.4. Response of Elements Attached to Buildings	106
2.2.5. Adjacent Buildings	106
2.2.6. Irregular Buildings	107
2.2.7. Lateral-Force-Resisting Systems	108
2.2.8. Diaphragms	111
2.2.9. Ductility	111
2.2.10. Damage Control Features	112
2.2.11. Continuous Load Path	113
2.2.12. Redundancy	114
2.2.13. Configuration	114
2.2.14. Dynamic Analysis	114

2.3.	Uniform Building Code, 1997 Edition: Seismic Provisions	132
2.3.1.	Building Irregularities	133
2.3.2.	Design Base Shear, V	136
2.3.3.	Seismic Zone Factor Z	139
2.3.4.	Seismic Importance Factor I_E	141
2.3.5.	Building Period T	141
2.3.6.	Structural System Coefficient R	142
2.3.7.	Seismic Dead Load W	142
2.3.8.	Seismic Coefficients C_v and C_a	144
2.3.9.	Soil Profile Types	146
2.3.10.	Seismic Source Type A, B, and C	147
2.3.11.	Near Source Factors N_a and N_v	147
2.3.12.	Distribution of Lateral Force F_x	147
2.3.13.	Story Shear V_x and Overturning Moment M_x	149
2.3.14.	Torsion	149
2.3.15.	Reliability/Redundancy Factor ρ	149
2.3.16.	Drift Limitations	150
2.3.17.	Deformation Compatibility	151
2.3.18.	Load Combinations	155
2.3.19.	Design Example, 1997 UBC: Static Procedure	158
2.3.20.	OSHPD and DSA Seismic Design Requirements	165
2.4.	ASCE 7-02, IBC 2003, and NFPA 5000: Seismic Provisions	169
2.4.1.	Seismic Design Highlights: ASCE 7-02, IBC-03, NFPA 5000	171
2.4.2.	ASCE 7-02: Detail Description of Seismic Provisions	175
2.4.3.	IBC 2003, NFPA 5000 (ASCE 7-02) Equivalent Lateral-Force Procedure	190
2.4.4.	Dynamic Analysis Procedure	202
2.4.5.	Design and Detailing Requirements	203
2.4.6.	Seismic Design Example: Static Procedure, IBC 2003 (ASCE 7-02, NFPA 5000)	205
2.4.7.	Seismic Design Example: Dynamic Analysis Procedure (Response Spectrum Analysis), Hand Calculations	212
2.4.8.	Anatomy of Computer Response Spectrum Analyses (In Other Words, What Goes on in the Black Box)	220
2.5.	Seismic Design of Structural Elements, Nonstructural Components, and Equipment; 1997 UBC Provisions	231
2.5.1.	Architectural Components	232
2.5.2.	Exterior Ornaments and Appendages	233
2.5.3.	Component Behavior	233
2.5.4.	1997 UBC Provisions	235
2.6.	Dynamic Analysis Theory	244
2.6.1.	Single-Degree-of-Freedom Systems	245
2.6.2.	Multidegree-of-Freedom Systems	248
2.6.3.	Modal Superposition Method	250
2.7.	Chapter Summary	258
Chapter 3. Steel Buildings		261
3.1.	Rigid Frames (Moment Frames)	262
3.1.1.	Deflection Characteristics	264
3.1.2.	Cantilever Bending Component	265
3.1.3.	Shear Racking Component	265
3.2.	Braced Frames	266
3.2.1.	Types of Braces	269

3.3.	Staggered Truss System	270
3.3.1.	Floor System	271
3.3.2.	Columns	274
3.3.3.	Trusses	275
3.4.	Eccentric Braced Frame (EBF)	275
3.4.1.	Ductility	276
3.4.2.	Behavior	276
3.4.3.	Essential Features of Link	276
3.4.4.	Analysis and Design Considerations	277
3.4.5.	Deflection Considerations	278
3.4.6.	Conclusions	278
3.5.	Interacting System of Braced and Rigid Frames	278
3.5.1.	Behavior	281
3.6.	Outrigger and Belt Truss Systems	282
3.6.1.	Behavior	284
3.6.2.	Deflection Calculations	285
3.6.3.	Optimum Location of a Single Outrigger	290
3.6.4.	Optimum Location of Two Outriggers	295
3.6.5.	Recommendations for Optimum Locations of Belt and Outrigger Trusses	297
3.7.	Framed Tube System	298
3.7.1.	Behavior	298
3.7.2.	Shear Lag Phenomenon	300
3.8.	Irregular Tube	302
3.9.	Trussed Tube	303
3.10.	Bundled Tube	305
3.11.	Seismic Design	307
3.11.1.	Concentric Braced Frames	308
3.11.2.	Eccentric Braced Frame (EBF)	324
3.11.3.	Moment Frames	335
Chapter 4. Concrete Buildings		349
4.1.	Structural Systems	349
4.1.1.	Flat Slab–Beam System	349
4.1.2.	Flat Slab–Frame with Shear Walls	352
4.1.3.	Coupled Shear Walls	352
4.1.4.	Rigid Frame	352
4.1.5.	Tube System with Widely Spaced Columns	353
4.1.6.	Rigid Frame with Haunch Girders	353
4.1.7.	Core-Supported Structures	354
4.1.8.	Shear Wall–Frame Interaction	354
4.1.9.	Frame Tube System	356
4.1.10.	Exterior Diagonal Tube	357
4.1.11.	Bundled Tube	358
4.1.12.	Miscellaneous Systems	358
4.2.	Seismic Design	361
4.2.1.	Load Factors, Strength Reduction Factors, and Load Combinations	369
4.2.2.	Integrity Reinforcement	371
4.2.3.	Intermediate Moment-Resisting Frames	373
4.2.4.	Special Moment-Resisting Frames	377
4.2.5.	Shear Walls	387
4.2.6.	Frame Members Not Designed to Resist Earthquake Forces	390
4.2.7.	Diaphragms	391

4.2.8.	Foundations	392
4.2.9.	Design Examples	394
Chapter 5.	Composite Buildings	443
5.1.	Composite Elements	444
5.1.1.	Composite Slabs	444
5.1.2.	Composite Frame Beams	445
5.1.3.	Composite Columns	445
5.1.4.	Composite Diagonals	449
5.1.5.	Composite Shear Walls	449
5.2.	Composite Building Systems	450
5.2.1.	Composite Shear Wall Systems	452
5.2.2.	Shear Wall–Frame Interacting Systems	454
5.2.3.	Tube Systems	455
5.2.4.	Vertically Mixed Systems	458
5.2.5.	Mega Frames with Super Columns	459
5.3.	Example Projects	460
5.3.1.	Buildings with Composite Steel Pipe Columns	460
5.3.2.	Buildings with Formed Composite Columns	462
5.3.3.	Buildings with Composite Shear Walls and Frames	465
5.3.4.	Building with Composite Tube System	468
5.4.	Super-Tall Buildings: Structural Concept	468
5.5.	Seismic Composite Systems	470
5.5.1.	Moment-Resisting Frames	474
5.5.2.	Braced Frames	480
5.5.3.	Composite Shear Walls	485
5.5.4.	Example Projects	489
Chapter 6.	Seismic Rehabilitation of Existing Buildings	499
6.1.	Code-Sponsored Design	500
6.2.	Alternate Design Philosophy	501
6.3.	Code Provisions for Seismic Upgrade	502
6.4.	Building Deformations	504
6.5.	Common Deficiencies and Upgrade Methods	505
6.5.1.	Diaphragms	506
6.5.2.	Concrete Shear Walls	513
6.5.3.	Reinforcing of Steel-Braced Frames	520
6.5.4.	Infilling of Moment Frames	521
6.5.5.	Reinforced Concrete Moment Frames	521
6.5.6.	Steel Moment Frames	522
6.5.7.	Open Storefront	523
6.5.8.	Clerestory	523
6.5.9.	Shallow Foundations	523
6.5.10.	Rehabilitation Measures for Deep Foundations	525
6.5.11.	Nonstructural Elements	525
6.6.	FEMA 356: Prestandard and Commentary on the Seismic Rehabilitation of Buildings	527
6.6.1.	Overview of Performance Levels	527
6.6.2.	Permitted Design Methods	529
6.6.3.	Systematic Rehabilitation	530
6.6.4.	FEMA 356: Design Examples	554
6.7.	Summary of FEMA 356	559

6.8.	Fiber-Reinforced Polymer Systems for Strengthening of Concrete Buildings	560
6.8.1.	Mechanical Properties and Behavior	560
6.8.2.	Design Philosophy	561
6.8.3.	Flexural Design	561
6.9.	Seismic Strengthening Details	562
6.9.1.	Common Strategies for Seismic Strengthening	564
Chapter 7. Gravity Systems		585
7.1.	Structural Steel	585
7.1.1.	Tension Members	586
7.1.2.	Members Subject to Bending	589
7.1.3.	Members Subject to Compression	593
7.2.	Concrete Systems	603
7.2.1.	One-Way Slabs	604
7.2.2.	T-Beam Design	611
7.2.3.	Two-Way Slabs	620
7.2.4.	Unit Structural Quantities	626
7.3.	Prestressed Concrete Systems	627
7.3.1.	Prestressing Methods	629
7.3.2.	Materials	630
7.3.3.	Design Considerations	632
7.3.4.	Cracking Problems in Post-Tensioned Floors	634
7.3.5.	Concept of Secondary Moments	636
7.3.6.	Step-by-Step Design Procedure	648
7.3.7.	Strength Design for Flexure	675
7.4.	Composite Gravity Systems	683
7.4.1.	Composite Metal Deck	683
7.4.2.	Composite Beams	699
7.4.3.	Composite Haunch Girders	716
7.4.4.	Composite Trusses	718
7.4.5.	Composite Stub Girders	718
7.4.6.	Composite Columns	727
Chapter 8. Special Topics		731
8.1.	Tall Buildings	731
8.1.1.	Structural Concepts	732
8.1.2.	Case Studies	734
8.1.3.	Future of Tall Buildings	789
8.1.4.	Unit Structural Quantities	791
8.2.	Damping Devices for Reducing Motion Perception	796
8.2.1.	Passive Viscoelastic Dampers	798
8.2.2.	Tuned Mass Damper	798
8.2.3.	Sloshing Water Damper	803
8.2.4.	Tuned Liquid Column Damper	803
8.2.5.	Simple Pendulum Damper	805
8.2.6.	Nested Pendulum Damper	807
8.3.	Panel Zone Effects	807
8.4.	Differential Shortening of Columns	812
8.4.1.	Simplified Method	816
8.4.2.	Column Shortening Verification During Construction	826
8.5.	Floor-Leveling Problems	828

- 8.6. Floor Vibrations 829
 - 8.6.1. General Discussion 829
 - 8.6.2. Response Calculations 831
- 8.7. Seismic Isolation 835
 - 8.7.1. Salient Features 837
 - 8.7.2. Mechanical Properties of Seismic Isolation Systems 839
 - 8.7.3. Seismically Isolated Structures: ASCE 7-02 Design Provisions 842
- 8.8. Passive Energy Dissipation Systems 864
- 8.9. Buckling-Restrained Braced Frame 867
