

TUNCER CEBECI

Turbulence Models and Their Application

Springer

Contents

1. Turbulence Models	1
1.0 Introduction	1
1.1 CS Model	2
1.2 $k-\varepsilon$ Model	5
1.3 $k-\omega$ Model	9
1.4 SST Model	10
1.5 SA Model	13
References	14
2. Solution of the CS and $k-\varepsilon$ Model Equations	17
2.0 Introduction	17
2.1 Transformed Variables	17
2.2 Solution Procedure	19
2.3 Solution of the $k-\varepsilon$ Equations with a Zonal Method	22
2.3.1 Inner Region	22
2.3.2 Interface Between Inner and Outer Regions	27
2.3.3 Outer Region	28
2.3.4 Block-Elimination Method	30
2.4 Solution of the $k-\varepsilon$ Model Equations with and Without Wall Functions	31
2.4.1 Solution of the $k-\varepsilon$ Model Equations Without Wall Functions	31
2.4.2 Solution of the $k-\varepsilon$ Model Equations with Wall Functions	33
References	34

3. Computer Program for CS and $k\text{-}\varepsilon$ Models	35
3.0 Introduction	35
3.1 Part 1 – Components of the Computer Program	
Common to Both Models	35
3.1.1 MAIN	35
3.1.2 Subroutine INPUT	36
3.1.3 Subroutine IVPT	37
3.1.4 Subroutine GROWTH	39
3.1.5 Subroutine GRID	39
3.1.6 Subroutine OUTPUT	40
3.2 Part 2 – CS Model	40
3.2.1 Subroutine COEFTR	41
3.2.2 Subroutine SOLV3	43
3.2.3 Subroutines EDDY, GAMCAL, CALFA	45
3.3 Part 3 – $k\text{-}\varepsilon$ Model	46
3.3.1 Subroutines KECOEF, KEPARM, KEDEF and KEDAMP	46
3.3.2 Subroutine KEINITK	51
3.3.3 Subroutine KEINITG	52
3.3.4 Subroutine KEWALL	52
3.3.5 Subroutine KESOLV	52
3.4 Part 4 – Solution Algorithm	52
3.5 Part 5 – Basic Tools	54
References	54
4. Computer Program for CS Model for Flows with Separation	55
4.0 Introduction	55
4.1 Numerical Method	58
4.2 Computer Program	62
4.2.1 Subroutine INPUT	63
4.2.2 Subroutine IVPL	64
4.2.3 Subroutine HIC	64
References	66
5. Hess-Smith Panel Method with Viscous Effects	67
5.0 Introduction	67
5.1 Mathematical Models for the Interaction Process in Inviscid Flows	68
5.2 HS Panel Method	71
5.3 Viscous Effects	77
5.4 Flowfield Calculation in the Wake	80
5.5 Computer Program	82
5.5.1 MAIN	82

5.5.2	Subroutine COEF	82
5.5.3	Subroutine OBKUTA	82
5.5.4	Subroutine GAUSS	83
5.5.5	Subroutine VPDIS	83
5.5.6	Subroutine CLCM.....	84
5.5.7	Subroutine VPDWK.....	84
	References	84
6.	Application of the Computer Program for the CS and k-ϵ Models to Other Higher-Order Turbulence Models .	85
6.0	Introduction	85
6.1	Solution of the k - ω and SST Model Equations	85
6.2	Solution of the SA Model Equations.....	88
6.3	Extension of k - ϵ Model to Flows with Separation	94
7.	Companion Computer Programs	97
7.0	Introduction	97
7.1	Test Cases for the CS and k - ϵ Models	98
7.2	Sample Calculations for the Panel Method Without Viscous Effects	99
7.3	Sample Calculations for the Inverse Boundary-Layer Program ..	103
7.4	Sample Calculations with the Interactive Boundary-Layer Program	105
7.5	Computer Programs in the CD-ROM.....	112
	References	116
	Subject Index	117
