DECISION TECHNOLOGY

Modeling,
Software,
and
Applications

Matthew J. Liberatore / Robert L. Nydick

Table of Contents

Foreword iv Preface v Acknowledgments vi

1. Introduction 1

Decision Technology, Management Science, and Modeling	1	Overview	1	Breakeven Example	1
Modeling Techniques	2				
Modeling Software vs. Spreadsheets	4				
Becoming an Active Modeler	4				
Decision-Technology Projects	5	Mathematical Programming	5	Decision Analysis	6
Simulation	7	Organizational Feedback	9		
Summary	10	Appendix: Analytical Decision Making vs. Intuition	10	References	11

Part One Mathematical Programming

2. Introduction to Mathematical Programming 13

Introduction	13	Examples	13	Components of a Mathematical Program	14	Assumptions	14
Modeling Process	14						
Linear Programming	15	Graphical Solution Using the Corner Point Method	15	Iso-Profit Line Approach	17	Simplex Method Concepts	18
		Karmarkar's Method	19	LINGO Solution	19		
Integer Programming	21	Graphical Solution	21	Branch and Bound Solution Procedure	22		
LINGO Solution	23						
Non-Linear Programming	24	Graphical Solution	24	Gradient Search	26	LINGO Solution	27
Summary	28	Homework Problems	28	References	29		

3. Mathematical Programming Sensitivity Analysis 30

Introduction	30						
Lego Example	30	The Lego Model	31	The Solution	32	Slack and Surplus	32
Side Changes	32	Dual Prices and Ranging	34	Changes to the Objective Function Coefficients	35	Right-Hand	
Reduced Costs	36	Alternate Optimal Solutions	37	Sensitivity Summary	38		
Sensitivity Analysis Example: Lawn Care, Inc.	38	Concept Review	38	Adding a "Greater than or			
Equal to" Constraint	40	Interpreting the Output of a Minimization Problem	42				
Summary	43	Homework Problems	43	References	46		

4. Mathematical Programming Using the LINGO Modeling Language 47

Introduction	47						
The Diet Problem	47	Problem Statement	47	Modeling Steps	48	Developing the Model	49
The Complete Model	53						
Diet Problem Extensions	54	Adding a Food	54	Adding Bounds on Portions	55	Adding a	
Vitamin	55						
Working with LINGO	55						
Summary	56	Homework Problems	57	References	58		

5. Transportation and Distribution Planning Using the LINGO Modeling Language* 59

Introduction	59			
The Transportation Problem	59	<i>Problem Statement</i>	59	<i>Problem Formulation and Solution</i> 61
		<i>Using Spreadsheets for Data Input and Output</i>	65	
Direct Transportation Extensions	67	<i>Unbalanced Problem: Total Supply Greater Than Total Demand</i>	68	
		<i>Unbalanced Problem: Total Demand Greater Than Total Supply</i>	68	<i>A Restricted Route</i> 68 <i>The Warehouse Location Problem</i> 69 <i>Multimodal Transportation Problem</i> 70
Assignment-Based Transportation Extensions	73	<i>Assignment Problem</i>	73	<i>Traveling Salesman Problem</i> 77 <i>Vehicle Routing Problem</i> 85
Summary	88	<i>Homework Problems</i>	88	<i>References</i> 89

6. Scheduling, Finance, and Marketing Applications Using the LINGO Modeling Language 90

Introduction	90			
Scheduling Applications	90	<i>A Staff Scheduling Problem</i>	90	<i>Production Scheduling</i> 95
Financial Applications	97	<i>The Portfolio Problem</i>	97	
Capital Budgeting Problem and Extensions	104	<i>The Capital Budgeting Problem</i>	104	
Marketing Applications	108	<i>Media Selection</i>	108	<i>Floor Space Allocation</i> 109
Key LINGO Commands	113			
Summary	114	<i>Homework Problems</i>	114	<i>References</i> 115

7. Transportation and Distribution Planning Using LINGO's Standard Algebraic Approach 116

Introduction	116			
The Transportation Problem	116	<i>Problem Statement</i>	116	<i>Problem Formulation and Solution</i> 118
Direct Transportation Extensions	119	<i>Unbalanced Problem: Total Supply Greater Than Total Demand</i>	119	<i>Unbalanced Problem: Total Demand Greater Than Total Supply</i> 121 <i>A Restricted Route</i> 121 <i>The Warehouse Location Problem</i> 122 <i>Multimodal Transportation Problem</i> 124
Assignment-Based Transportation Extensions	124	<i>Assignment Problem</i>	126	<i>Traveling Salesman Problem</i> 126 <i>Vehicle Routing Problem</i> 135
Summary	136	<i>Homework Problems</i>	136	<i>References</i> 137

8. Scheduling, Finance, and Marketing Applications Using LINGO's Standard Algebraic Approach 138

Introduction	138			
Scheduling Applications	138	<i>A Staff Scheduling Problem</i>	138	<i>Production Scheduling</i> 142
Financial Applications	144	<i>The Portfolio Problem</i>	144	
Capital Budgeting Problem and Extensions	147	<i>The Capital Budgeting Problem</i>	147	
Marketing Applications	150	<i>Media Selection</i>	150	<i>Floor Space Allocation</i> 152
Summary	154	<i>Homework Problems</i>	154	<i>References</i> 156

Part Two Decision Making and the Analytic Hierarchy Process

9. Introduction to Decision Making 157

Introduction	157			
Classical Decision Analysis	158	<i>Expected Monetary Value</i>	158	<i>Utility Theory</i> 159
		<i>Utility in Practice</i>	161	
Analytic Hierarchy Process	161	<i>Background</i>	161	
Summary	164	<i>References</i>	165	

*Chapter 5 and 6 use the LINGO modeling language approach; Chapters 7 and 8 cover essentially the same material, but use the standard algebraic LINGO approach. Therefore, skip Chapters 5 and 6 or 7 and 8 per instruction from your professor. See the Preface for further details.

10. The Analytic Hierarchy Process Using Expert Choice 166

Applying the AHP Using Expert Choice: Car Purchase Example	166	<i>Building the Hierarchy</i>	166
<i>Analyzing the Hierarchy</i>	167	<i>Entering and Processing the Cost Judgments</i>	167
<i>Judgments</i>	173	<i>Remaining Computations for the Car Example</i>	176
<i>Synthesis</i>	181	<i>Distribution vs. Ideal</i>	
<i>Sensitivity Analysis</i>	183		
Summary	185	Homework Problems	185
		References	186

11. Extensions of the Analytic Hierarchy Process Using Expert Choice 187

Introduction	187		
AHP Validation Exercise	187		
Structuring Multilevel Hierarchies	188		
The AHP Ratings Approach	191	<i>Conventional versus AHP Ratings and Scoring Methods</i>	191
<i>Applying the AHP Ratings Approach Using Expert Choice: Carpet Supplier Evaluation Example</i>	192		
Group Decision Making	197		
Case Study: Health Technology Assessment	202		
Summary	206	Homework Problems	207
		References	210

Part Three Computer Simulation

12. Introduction to Computer Simulation 211

Introduction	211		
Application Example: Adding a Second Service Bay	211	<i>Advantages of Simulation</i>	212
<i>Classes of Simulation Models</i>	212		
Monte Carlo Simulation	213	<i>The Use of Random Numbers in Simulation</i>	213
<i>Simulation</i>	216	<i>Spreadsheet</i>	
Game Show Simulation	218	<i>The Monte Hall Problem and Solution</i>	218
<i>Using Simulation</i>	219	<i>Understanding the Solution</i>	
Summary	219	Homework Problems	220
		References	220

13. Introduction to Process Simulation Using Extend 221

Queuing Simulation	221	<i>Introduction to Queuing</i>	221
Queuing Simulation with Extend: A Banking Example	222	<i>Introduction</i>	222
<i>Banking Problem Overview</i>	223	<i>Extend Blocks</i>	222
<i>Data</i>	224	<i>Generating Arrivals</i>	224
<i>Entering the Queue</i>	227	<i>Applying Stat::Fit to Interarrival Time</i>	
<i>Time</i>	232	<i>Receiving Service</i>	228
<i>Plotting the Results</i>	232	<i>Exiting the System</i>	231
<i>Running the Complete Model</i>	233	<i>Keeping</i>	
<i>Interpreting the Model's</i>		<i>Results</i>	236
<i>An Important Queuing Relationship: λ, μ, and the Number of Servers</i>	238	<i>Running the</i>	
<i>Banking Simulation with Additional Servers</i>	239	<i>Banking Simulation with Additional Servers</i>	239
<i>Little's Law</i>	243	<i>Statistics and Confidence</i>	
<i>Intervals</i>	244	<i>Hierarchical Models</i>	246
<i>Model Input and Output</i>	246		
Summary	251	Homework Problems	251
		References	252

14. Process Simulation Extensions Using Extend 253

Introduction	253		
Extensions of the Banking Simulation Model	253	<i>Reneging</i>	253
<i>Change During the Simulation</i>	259	<i>Balking</i>	255
<i>Computing Service Levels</i>	264	<i>Interarrival Times</i>	
<i>Cycling</i>	265	<i>Batch Arrivals and</i>	
<i>Banking Simulation with Resources</i>	266	<i>Scheduled Arrivals</i>	269
<i>Scheduled Arrivals</i>	269	<i>Lines Behind Each</i>	
<i>Server: A Bank Drive-Through Window</i>	272		
Summary	274	Homework Problems	275
		References	277

15. Process Redesign Using Extend 278

Introduction	278		
Process Redesign Using Extend: A Car Wash Example	278	<i>One Wash-Only Bay</i>	278
		<i>Adding a Second Bay: Wash-Only</i>	278
		<i>Adding a Second Bay: Wash-and-Wax</i>	280
		<i>Converting Both Bays to Wash-and-Wax</i>	283
		<i>Economic and Service Level Analysis</i>	283
Optimization with Extend	287	<i>Optimization for the Loading Berth Problem</i>	288
		<i>Optimization for a Tollbooth Problem</i>	289
Summary	293	Homework Problems	293
		References	295

16. Financial Simulation Using Extend 296

Introduction	296		
Continuous Stimulation with Extend: A Financial Model	296	<i>Introduction</i>	296
		<i>Cash Flow Computations</i>	297
		<i>Model Output</i>	299
		<i>A Hierarchical Model</i>	300
Building an Enhanced Financial Model	302	<i>Introduction</i>	302
		<i>Developing the Model</i>	303
		<i>Model Output</i>	308
		<i>Model Validation</i>	309
Summary	311	Homework Problems	311
		References	312

Part Four Project Analysis

17. Project Scheduling Using Microsoft Project 2000 313

Introduction	313	<i>Examples</i>	313
		<i>CPM and PERT</i>	314
Structuring the Project	314	<i>Required Task Information</i>	314
		<i>Using MS Project 2000</i>	315
		<i>Drawing the Project Network</i>	318
		<i>Milestones</i>	321
		<i>Accessing Task Information</i>	321
		<i>Summary Tasks</i>	323
		<i>Work Breakdown Structure</i>	323
Critical Path Analysis	324	<i>Introduction</i>	324
		<i>Path Enumeration</i>	325
		<i>Early Start and Finish Times</i>	326
		<i>Late Start and Finish Times</i>	328
		<i>Total Slack</i>	330
		<i>Free Slack</i>	331
Summary	332	Homework Problems	333
		References	334

18. Project Resource and Cost Analysis Using Microsoft Project 2000 335

Introduction	335		
Resource Analysis	336	<i>Entering Resource Information</i>	336
		<i>Resource Loading</i>	339
		<i>Resource Leveling</i>	339
		<i>Constrained Resource Scheduling</i>	340
		<i>Constrained Resource Scheduling Using MS Project 2000</i>	343
		<i>Setting the Project Schedule and Budget</i>	350
		<i>Resource Analysis in Multiresource, Multiproject Environments</i>	352
Time-Cost Trade-Off Analysis	352	<i>The Time-Cost Trade-off Problem</i>	352
		<i>Time-Cost Trade-off</i>	
		<i>Heuristic</i>	353
		<i>Time-Cost Trade-off Using MS Project 2000</i>	357
Summary	357	Homework Problems	358
		References	359

Appendix A: Statistical Concepts 361

Appendix B: A Summary Description of All Extend Blocks Used 384

Index	386
