

STRUCTURE AND  
DYNAMICS OF  
MACROMOLECULES:  
ABSORPTION AND  
FLUORESCENCE STUDIES

J.R. Albani

# Contents

## Preface

v

### 1. Light absorption by a molecule

1. Jablonski diagram or diagram of electronic transitions	1
2. Singlet and triplet states	2
3. Forbidden and non forbidden transitions	7
4. Reading the Jablonski diagram	7
5. Chemical bonds	8
5a. Atomic and molecular orbitals	8
5b. The coordinated bond	9
6. Absorption spectroscopy	11
6a. Origin and properties of the absorption spectra	11
6b. Beer-Lambert-Bouguer law	14
6c. Determination of the molar extinction coefficient of proteins	18
6d. Effect of high optical densities on the Beer-Lambert-Bouguer law	21
6e. Effect of the environment on the absorption spectra	21
6f. Absorption spectroscopy and electron transfer mechanism in proteins	27
6g. Second – derivative absorption spectroscopy	40
6g1. Theory	40
6g2. Binding of progesterone to $\alpha_1$ -acid glycoprotein	47

### 2. Fluorescence : Principles and observables

1. Introduction	55
2. Fluorescence properties	58
2a. Stokes shift	58
2b. Relation between emission spectrum and excitation wavelength	60
2c. Relation between the fluorescence intensity and the optical density	62
2d. Fluorescence excitation spectrum	66
2e. The mirror-image rule	69
2f. Fluorescence lifetime	70
2f1. Definition of the fluorescence lifetime	70
2f2. Mean fluorescence lifetime	72
2f3. Fluorescence lifetime measurement	73

2f4. Time Correlated Single Photon counting	79
2f5. The Strobe technique	84
2f6. Excitation with continuous light : the phase and demodulation method	85
Principles	85
Multifrequency and cross-correlation	88
2g. Fluorescence quantum yield	91
2h. Fluorescence and light diffusion	98
<b>3. Fluorophores : Descriptions and properties</b>	
1. Introduction	99
2. Types of fluorophores	99
2a. Intrinsic fluorophores	99
2a1. The aromatic amino acids	99
2a2. The Co-factors	111
2b. Extrinsic fluorophores	113
2b1. Fluorescein and rhodamine	113
2b2. Naphthalene sulfonate	114
2b3. Nucleic bases	123
2b4. Ions detectors	124
2b5. Carbohydrates fluorescent probes	127
2b6. Oxidation of tryptophan residues with N-bromosuccinimide	129
2b7. Nitration of tyrosine residues with tetranitromethane (TNM)	131
3. Effect of the environment on the fluorescence observables	134
3a. Polarity effect on the quantum yield and the position of the emission maximum	134
3b. Effect of the viscosity on the fluorescence emission spectrum	136
3c. Effect of the environment on the fluorescence lifetime	139
3d. Relation between fluorescence and a specific sequence in a protein	140
<b>4. Fluorescence quenching</b>	
1. Introduction	141
2. Collisional quenching: the Stern-Volmer relation	141
3. The different types of dynamic quenching	145
4. Static quenching	158
4a. Theory	158
4b. Cytochrome c - cytochrome b <sub>2</sub> core interaction	161
4c. Cytochrome b <sub>2</sub> core - flavodehydrogenase interaction	162
4d. Determination of drug binding to $\alpha_1$ -acid glycoprotein	164
5. Comparison between dynamics and static quenching	166
6. Combination of dynamic and static quenching	169
7. Thermal intensity quenching	171
8. Photoquenching	191

5. Fluorescence polarization	
1. Aim and definition	193
2. Principles of polarization or of photoselection	194
3. Absorption transitions and excitation polarization spectrum	197
4. Fluorescence depolarization	199
4a. Principles and applications	199
4b. Measurements of rotational correlation time of tyrosine in small peptides	206
4b1. Fluorescence lifetime	206
4b2. Fluorescence intensity quenching of tyrosine residues by iodide	206
4b3. Quenching emission anisotropy	208
4c. DNA-Protein interaction	209
5. Fluorescence anisotropy decay time	211
6. Depolarization and energy transfer	214
6. Förster energy transfer	
1. Principles	217
2. Energy transfer parameters	224
3. Relation between energy transfer and static quenching	227
7. Origin of protein fluorescence	237
8. Description of the structure and dynamics of $\alpha_1$ - acid glycoprotein by fluorescence studies	
1. Introduction	261
2. Methods	266
3. Fluorescence properties of TNS bound to sialylated $\alpha_1$ -acid glycoprotein	267
3a. Binding parameters	267
3b. Fluorescence lifetime	270
3c. Dynamics of TNS bound to $\alpha_1$ -acid glycoprotein	270
4. Fluorescence properties of calcofluor bound to $\alpha_1$ -acid glycoprotein	274
4a. Fluorescence parameters of calcofluor bound to $\alpha_1$ -acid glycoprotein	274
4b. Binding parameters	276
4c. Nature of the interaction of calcofluor with $\alpha_1$ -acid glycoprotein and HSA	277
4d. Titration of carbohydrate residues with calcofluor	280
4e. Fluorescence lifetime of calcofluor bound to $\alpha_1$ -acid glycoprotein	285
4f. Binding parameters of calcofluor white - $\alpha_1$ -acid glycoprotein by following the fluorescence lifetime of calcofluor	287
4g. Dynamics of calcofluor bound to $\alpha_1$ -acid glycoprotein at equimolar concentrations	288
4g1. Dynamics of calcofluor bound to sialylated $\alpha_1$ -acid glycoprotein	288
4g2. Dynamics of Calcofluor bound to asialylated $\alpha_1$ - acid glycoprotein	289

4h. Dynamics of calcofluor bound to $\alpha_1$ -acid glycoprotein at excess concentration of calcofluor	291
5. Fluorescence properties of the Trp residues in $\alpha_1$ -acid glycoprotein	293
5a. Fluorescence spectral properties	293
5b. Effect of high calcofluor concentration on the local structure of $\alpha_1$ -acid glycoprotein	296
5c. Deconvolution of the emission spectra obtained at low and high concentrations of calcofluor into different components	297
5c1. Analysis as a sum of Gaussian bands	297
5c2. The Ln-normal analysis	299
6. Förster energy transfer experiments from Trp residues to calcofluor white	305
7. Relation between the secondary structure of carbohydrate residues of $\alpha_1$ -acid glycoprotein and the fluorescence of the Trp residues of the protein	309
8. Effect of the secondary structure of carbohydrate residues of $\alpha_1$ -acid glycoprotein on the local dynamics of the protein	313
8a. Fluorescence emission intensity of $\alpha_1$ -acid glycoprotein as a function of temperature	313
8b. Fluorescence emission anisotropy of $\alpha_1$ -acid glycoprotein as a function of temperature	315
9. Tertiary structure of $\alpha_1$ -acid glycoprotein : first model describing the presence of a pocket	319
10. Are there any alternative fluorescence methods other than the QREA or the Weber's method to put into evidence the presence of a pocket within $\alpha_1$ -acid glycoprotein?	323
11. Experiments giving proofs of the presence of a pocket within $\alpha_1$ -acid glycoprotein	324
11a. Binding of progesterone to $\alpha_1$ -acid glycoprotein	324
11b. Binding of hemin to $\alpha_1$ -acid glycoprotein	327
12. Homology modeling of $\alpha_1$ -acid glycoprotein	327
13. Dynamics of Trp residues in crystals of human $\alpha_1$ -acid glycoprotein	332
13a. Introduction	332
13b. Protein Preparation	332
13c. Fluorescence Excitation and Emission Spectra	334
13d. Dynamics of the Microenvironments of the hydrophobic Trp Residues	336
14. Structural studies of human $\alpha_1$ -acid glycoprotein followed by X-rays scattering and transmission electron microscopy.	339
14a. Small angle diffraction studies (SAXS)	339
14b. Wide angle diffraction studies (WAXS)	341
14b1. Carbohydrate residues studies	341
14c. Electron microscopy studies	342
9. Structure and dynamics of hemoglobin subunits and of myoglobin	
1. Introduction	345
2. Dynamics of Trp residues in hemoglobin and in its subunits	346

3. Properties of protoporphyrin IX in different solvents and in apomyoglobin	349
3a. Chemical structure of the porphyrins	349
3b. Spectral properties of proporphyrin IX in different solvents	351
3c. Spectral properties of protoporphyrin IX bound to apomyoglobin ( $Mb^{desFe}$ )	357
4. Dynamics of protoporphyrin IX embedded in the heme pocket	359
4a. Protein rotational correlation time	359
4b. Activation energy of the porphyrin motions in the heme-pocket	359
4c. Residual internal motions of porphyrin	360
4d. Effect of metal on the porphyrin dynamics	362
5. Dynamics of the protein matrix and the heme pocket	364
6. Significance of the upward curvature	367
7. Effect of sucrose on the bimolecular diffusion constant	370
10. Fluorescence fingerprints of animal and vegetal species and / or varieties	
1. Fluorescence fingerprints of <i>Eisenia fetida</i> and <i>Eisenia andrei</i>	373
1a. Introduction	373
1b. Results	374
2. Structural characterization of varieties of crops among a species and of genetically modified organisms: a fluorescence study	377
2a. Pioneering work	377
2b. Structural characterization of crops	379
References	387
Index	409
