Clinical Neuroanatomy

- Concise overview of neuroanatomy and of its functional and clinical implications
- Excellent review for the USMLE
- includes cases and practice exam

Stephen G. Waxman

INTERNATIONAL EDITION

twenty-
fifth
edition

Contents

Preface	ix
I. BASIC PRINCIPLES	1
1. Fundamentals of the Nervous System	1
General Plan of the Nervous System 1	Planes & Terms 6
Peripheral Nervous System 6	References 6
2. Nervous Tissue and Its Cells	7
Cellular Aspects of Neural Development 7	Degeneration & Regeneration 12
Neurons 7	Neurogenesis 17
Neuronal Groupings & Connections 11	References 18
Neuroglia 11	
3. Signaling in the Nervous System	19
Membrane Potential 19	Synaptic Transmission 25
Generator Potentials 20	Excitatory & Inhibitory Synaptic Actions 27
Action Potentials 21	Synaptic Plasticity & Long-Term Potentiation 27
The Nerve Cell Membrane Contains Ion Channels 21	Presynaptic Inhibition 28
The Effects of Myelination 22	The Neuromuscular Junction & the End-Plate Potential 28
Conduction of Action Potentials 22	Neurotransmitters 29
Synapses 23	Case 1 33
Clinical Illustration 3-1 24	References 34
II. INTRODUCTION TO CLINICAL THINKING	35
4. Introduction to Clinical Thinking: The Relationship Between Neuroanatomy and Neurology	35
Symptoms & Signs of Neurologic Diseases 35	Clinical Illustration 4-1 42
Where is the Lesion? 38	Clinical Illustration 4-2 42
What is the Lesion? 39	The Treatment of Patients with Neurologic Disease 43
The Role of Neuroimaging & Laboratory Investigations 40	Clinical Illustration 4-3 43
	References 44
III. SPINAL CORD AND SPINE	45
5. The Spinal Cord	45
Development 45	Lesions in the Motor Pathways 63
External Anatomy of the Spinal Cord 45	Examples of Specific Spinal Cord Disorders 68
Spinal Roots & Nerves 48	Case 2 69
Internal Divisions of the Spinal Cord 51	Case 3 69
Pathways in White Matter 53	References 69
Clinical Illustration 5-1 58	
Reflexes 59	

6. The Spinal Cord In Situ; Imaging	70
Investing Membranes 70	Imaging of the Spine & Spinal Cord 76
Spinal Cord Circulation 71	Case 4 77
Clinical Illustration 6-1 72	Case 5 77
The Vertebral Column 74	References 80
Lumbar Puncture 75	
IV. ANATOMY OF THE BRAIN	81
7. The Brain Stem and Cerebellum	81
Development of the Brain Stem & Cranial	Vascularization 92
Nerves 81	Clinical Illustration 7-1 93
Organization of the Brain Stem 81	Clinical Illustration 7-2 94
Cranial Nerve Nuclei in the Brain Stem 84	Cerebellum 94
Medulla 86	Case 6 101
Pons 89	Case 7 101
Midbrain 91	References 101
8. Cranial Nerves and Pathways	102
Origin of Cranial Nerve Fibers 102	Case 8 121
Functional Components of the Cranial	Case 9 121
Nerves 102	References 123
Anatomic Relationships of the Cranial	
Nerves 103	
9. Diencephalon	124
Thalamus 124	Circumventricular Organs 135
Hypothalamus 127	Case 10 135
Subthalamus 132	References 136
Epithalamus 135	
10. Cerebral Hemispheres/Telencephalon	137
Development 137	Basal Ganglia 149
Anatomy of the Cerebral Hemispheres 137	Internal Capsule 152
Microscopic Structure of the Cortex 143	Case 11 153
Physiology of Specialized Cortical	Case 12 153
Regions 148	References 154
11. Ventricles and Coverings of the Brain	155
Ventricular System 155	Skull 162
Meninges & Spaces 157	Case 13 167
CSF 159	Case 14 168
Barriers in the Nervous System 160	References 168
12. Vascular Supply	169
Arterial Supply of the Brain 169	Case 15 183
Venous Drainage 173	Case 16 185
Cerebrovascular Disorders 175	References 188
Clinical Illustration 12-1 182	

V. FUNCTIONAL SYSTEMS	189
13. Control of Movement	189
Control of Movement 189	Case 17 201
Major Motor Systems 189	Case 18 201
Motor Disturbances 197	References 201
14. Somatosensory Systems	202
Receptors 202	Pain 203
Connections 202	Case 19 206
Sensory Pathways 202	Case 20 207
Cortical Areas 203	References 207
15. The Visual System	208
The Eye 208	The Visual Cortex 218
Visual Pathways 213	Case 21 222
Clinical Illustration 15-1 217	References 222
16. The Auditory System	223
Anatomy & Function 223	Case 22 226
Auditory Pathways 225	References 228
17. The Vestibular System	229
Anatomy 229	Case 23 232
Vestibular Pathways 229	References 232
Functions 230	
18. The Reticular Formation	233
Anatomy 233	References 237
Functions 233	
19. The Limbic System	238
The Limbic Lobe & Limbic System 238	Functions & Disorders 246
Olfactory System 238	Septal Area 246
Hippocampal Formation 240	Case 24 248
Clinical Illustration 19-1 241	References 249
20. The Autonomic Nervous System	250
Autonomic Outflow 250	Transmitter Substances 261
Autonomic Innervation of the Head 256	Case 25 265
Visceral Afferent Pathways 257	References 266
Hierarchical Organization of the Autonomic Nervous System 258	
21. Higher Cortical Functions	267
Frontal Lobe Functions 267	Clinical Illustration 21-1 275
Language & Speech 267	Case 26 276
Cerebral Dominance 272	Case 27 276
Memory & Learning 273	References 276
Epilepsy 273	

VI. DIAGNOSTIC AIDS	277
22. Imaging of the Brain	277
Skull X-Ray Films 277	Diffusion-Weighted Imaging 283
Angiography 277	Functional MRI 284
Computed Tomography 279	Positron Emission Tomography 284
Magnetic Resonance Imaging 282	Single Photon Emission CT 286
Magnetic Resonance Spectroscopy 282	References 288
23. Electrodiagnostic Tests	289
Electroencephalography 289	Electromyography 292
Evoked Potentials 290	Nerve Conduction Studies 296
Transcranial Motor Cortical Stimulation 292	References 297
24. Cerebrospinal Fluid Examination	298
Indications 298	Analysis of the CSF 298
Contraindications 298	Reference 300
VII. DISCUSSION OF CASES	301
25. Discussion of Cases	301
The Location of Lesions 301	Cases 303
The Nature of Lesions 302	References 319
Appendix A: The Neurologic Examination	320
Appendix B: Testing Muscle Function	328
Appendix C: Spinal Nerves and Plexuses	345
Appendix D: Questions and Answers	362
Index	371
