

Structural
and Functional
Relationships
in Prokaryotes

Larry L. Barton

Springer

Contents

Preface	vii
I. An Introduction to the Prokaryotic Cell	1
1. The Cellular System	3
1.1. Introduction	3
1.2. Phylogeny of the Prokaryotes	4
1.2.1. Variation Among the Prokaryotes	6
1.2.1.1. The Two Domains	6
1.2.1.2. The <i>Archaea</i>	9
1.2.1.3. The <i>Bacteria</i>	9
1.2.2. Information Content	14
1.2.3. The Size of Bacteria	16
1.2.4. The Unity of Physiology	18
1.3. Structural Characteristics of Prokaryotes	19
1.3.1. The Periplasm	20
1.3.1.1. Function of the Periplasm	20
1.3.1.2. Isolation of Periplasmic Proteins	21
1.3.2. Genome Structure	22
1.4. Application of Electron Microscopy	25
1.5. Fractionation of Cells	31
1.5.1. Disruption of Cells	33
1.5.2. Isolation of Prokaryotic Cell Structures	34
1.5.2.1. Isolation of Ribosomes	36
1.5.2.2. Isolation of Plasma Membranes	36
1.5.2.3. Isolation of Peptidoglycan	38
1.5.2.4. Isolation of the Outer Membrane	39
1.5.2.5. Isolation of Polysaccharide Capsule	40
1.5.2.6. Criteria for Purity of Isolated Structure	40
References	40
Additional Reading	42

II. Cellular Structures and Their Function	45
2. The Plasma Membrane	47
2.1. Introduction	47
2.2. Membrane Function	47
2.2.1. Lipids as Anchors for Linear Molecules	48
2.2.2. Proteins and Transporters	48
2.3. Membrane Composition	52
2.3.1. Membrane Lipids	52
2.3.1.1. Glycerol Backbone	53
2.3.1.2. Fatty Acids and Isopranyl Alcohols	55
2.3.1.3. Phospholipids	59
2.3.1.4. Squalene	62
2.3.1.5. Hopanoids	63
2.3.1.6. Carotenoids	64
2.3.1.7. Quinones	64
2.3.2. Proteins in the Plasma Membrane	65
2.3.2.1. Solubilization of Membrane Proteins	65
2.3.2.2. Electron Transport Proteins	66
2.3.2.3. ATP Synthase/ATPase	68
2.3.2.4. Electron Carrier Complexes	68
2.4. Special Systems	69
2.4.1. Membranes of Cell Wall-Less Prokaryotes	69
2.4.2. Bacteriophage Membranes	71
2.4.3. Membrane Vesicles	72
2.4.4. Adhesion Sites	74
2.4.5. Mesosomes	75
2.4.6. Proteoliposomes	76
2.4.7. Signature Lipids	76
2.5. Membrane Synthesis	77
2.5.1. Lipid Synthesis	78
2.5.1.1. Fatty Acid Biosynthesis	78
2.5.1.2. Phospholipid Biosynthesis	80
2.5.1.3. Biosynthesis of Quinones	82
2.5.2. Turnover of Lipid	84
2.5.3. Response to Temperature	84
2.6. Physical Considerations with Regard to Membranes	85
2.6.1. Membrane Fluidity	85
2.6.2. Membrane Asymmetry	87
2.7. Destabilization of Membranes	88
2.7.1. Membrane-Active Chemicals	89
2.7.2. Hydrolytic Enzymes	89
References	91
Additional Reading	93

3. Cell Wall Structure	94
3.1. Introduction	94
3.2. Peptidoglycan: An Essential Structure in Bacteria	95
3.3. Chemistry of Peptidoglycan	97
3.3.1. Lysine-Containing Structure	98
3.3.2. Diaminopimelic Acid-Containing Structure	98
3.3.3. Ornithine-Containing Structure	100
3.3.4. Diaminobutyric Acid-Containing Structure	101
3.3.5. Homoserine-Containing Structure	101
3.3.6. The Amino Acid Cross Bridge	101
3.3.7. Peptidoglycan of Mycobacteria and Nocardia	103
3.4. Molecular Events in Synthesis of Peptidoglycan	103
3.4.1. Synthesis of NAM-NAG Dimers	103
3.4.2. Membrane-Associated Activities	105
3.4.3. Dimers and Synthesis of Peptidoglycan	107
3.4.4. Hydrolytic Enzymes and Peptidoglycan Turnover	107
3.4.5. Inhibitors of Cell Wall Synthesis	108
3.4.6. Antibiotic Resistance	111
3.4.7. Antibiotic-Binding Proteins	113
3.4.8. Sites of Cell Wall Synthesis	114
3.4.9. Structural Stability	116
3.5. Cell Walls of Archaea	116
3.5.1. Pseudomurein (Pseudopeptidoglycan)	116
3.5.2. Methanochondroitin	117
3.5.3. Heteropolysaccharide	118
3.5.4. Polyglutamine Glycoconjugate	118
3.6. Cell Walls of Endospores	119
3.6.1. Peptidoglycan Synthesis	120
3.6.2. Proteins and Enzymes	122
3.7. S-Layers of Prokaryotes	125
3.7.1. Structure	125
3.7.2. Chemistry	126
3.7.3. Biosynthesis	128
3.7.4. Function	129
3.7.5. Potential Applications	131
3.8. Distribution of Cell Wall Structures	131
References	132
Additional Reading	134
4. The Cell Wall Matrix	136
4.1. Introduction	136
4.2. Cell Walls of Gram-Positive Bacteria	137
4.2.1. Polysaccharides	137
4.2.2. Acidic Polymers	137

4.2.2.1. Teichoic Acids	138
4.2.2.2. Teichuronic Acids	140
4.2.2.3. Lipoteichoic Acids	143
4.2.2.4. Lipoglycans	146
4.2.2.5. Biological Activities	147
4.2.3. Proteins	148
4.2.3.1. Attachment of Proteins	148
4.2.3.2. Protein M	150
4.2.3.3. Streptococcal M Protein and Myosin	151
4.2.3.4. Protein A	151
4.3. Lipids in Cell Walls of Acid-Fast Bacteria	152
4.3.1. Firmly Attached Polymers	153
4.3.1.1. Mycolyl-Arabinogalactan	154
4.3.1.2. Lipoarabinomannan and Lipomannan	155
4.3.2. Extractable Lipids	155
4.3.3. Porin-Like Structures	156
4.4. Outer Membrane of Gram-Negative Bacteria	156
4.4.1. Lipopolysaccharide	157
4.4.1.1. O-Side Chain	158
4.4.1.2. Core Oligosaccharide	159
4.4.1.3. Lipid A	160
4.4.1.4. Lipopolysaccharide Synthesis	161
4.4.2. Wall (Braun) Lipoprotein	161
4.4.3. Porins	165
4.4.4. Enzymes, Cytochromes, and Toxins	169
4.4.5. Membrane Blebs and Vesicles	170
4.5. Surface Proteins of <i>Borrelia</i>	171
4.6. Surface Amphiphiles	172
4.6.1. Enterobacterial Common Antigens	173
4.6.2. Adhesions and Cell Clumping	173
4.6.3. Resistance to Hydrolytic Enzymes	176
4.7. Distribution of Hydrolases on the Cell Surface	177
4.7.1. Cellulosome	177
4.7.2. Starch Degradation	179
4.7.3. Lipases	180
4.8. Distribution of Cell Wall Components in Prokaryotes	183
References	187
Additional Reading	189
5. Capsules, Pili, and Internal Structures	190
5.1. Introduction	190
5.2. Capsules	191
5.2.1. Heteropolymers	193
5.2.1.1. Diversity of Capsules	193

5.2.1.2. Genetic Organization in Gram-Negative Bacteria	195
5.2.1.3. Genetic Organization in Gram-Positive Bacteria	197
5.2.2. Homopolymers	200
5.2.3. Biosynthesis of Capsules	202
5.2.4. Exopeptides as Capsules	204
5.2.5. Visualization	204
5.3. Sheaths	205
5.4. Pili	206
5.4.1. Types of Pili	207
5.4.2. Pili Structure	208
5.4.3. Gene Clusters	210
5.4.4. Biosynthesis	211
5.5. Internal Structures	213
5.5.1. Polyhydroxybutyrate	213
5.5.2. Polyglucose or Glycogen	215
5.5.3. Polyphosphate Granules	217
5.5.4. Magnetic Crystals	220
5.5.5. Carboxysomes	220
5.5.6. Gas Vesicles	222
5.5.7. Sulfur Globules	226
5.5.8. Cyanophycin Granules	227
5.5.9. Proteasomes	228
References	230
Additional Reading	232

III. Profiles of Bacterial Growth 235

6. Cell Motion, Sensing, and Communication	237
6.1. Introduction	237
6.2. Systems of Cell Motion	238
6.2.1. Gliding Motility	240
6.2.2. Swimming Motility in Bacteria	241
6.2.2.1. Characteristics of Flagella	242
6.2.2.2. Fine Structure and Synthesis of the Flagellar Unit	243
6.2.2.3. Mechanism of Motility	245
6.2.2.4. Variations in Bacterial Motility	246
6.2.3. Spirochete Motility	247
6.2.4. Motility of Archaea	250
6.2.4.1. Structure	251
6.2.4.2. Synthesis	252
6.3. Cell Sensing and Signaling Pathways	253
6.3.1. Two-Component Signal Transduction	254
6.3.1.1. Porin Regulation	257
6.3.1.2. Bacterial Virulence	257
6.3.1.3. Regulation of Sugar Phosphate Transport	260

6.3.1.4. Degradative System of <i>Bacillus</i>	261
6.3.2. Chemotaxis	262
6.3.3. Cross Talk	269
6.4. Quorum Sensing	269
6.4.1. Chemiluminescence and Homoserine Lactones	270
6.4.2. Pheromone and Competence Activities	274
6.4.3. Sporulation	276
6.5. Diversity in Cell Signaling	278
6.5.1. Conjugation Signal	279
6.5.2. Signal Transduction in <i>Caulobacter</i>	279
6.5.3. Signaling in Fruiting Body Bacteria	281
6.5.4. Actin Rearrangements in Host Cells	284
References	286
Additional Reading	289
7. Cellular Growth and Reproduction	292
7.1. Introduction	292
7.2. Measurement of Populations	293
7.2.1. Direct Measurements	293
7.2.2. Indirect Measurements	294
7.3. Mathematics of Population Growth	296
7.4. Cell Division and the Z Ring	299
7.5. Phases of Growth	302
7.5.1. Lag Phase	302
7.5.2. Log Phase	305
7.5.3. Stationary Phase	306
7.5.4. Death Phase	306
7.6. Dynamics of the Single Cell	307
7.7. Balanced Growth	309
7.8. Unbalanced Growth	310
7.9. Synchronous Growth	310
7.10. Energetics of Growth	313
7.10.1. Growth Yield Coefficient	314
7.10.2. Y_{ATP} and Y_{kcal} Yield Coefficients	315
7.10.3. Growth Yield and Efficiency	316
7.11. Maintenance Energy	317
7.12. Starvation Response	319
7.12.1. Physiological Changes	319
7.12.2. The Pho System	321
7.12.3. The SSI Response	323
7.13. Activities in the Post-Exponential Phase	323
7.13.1. Antibiotic Production	323
7.13.2. Toxin Production	325
7.13.3. Sporulation	327

7.13.3.1. Morphological Development	327
7.13.3.2. Sigma Factors	332
7.13.3.3. Proteins	333
7.13.4. Bacteriocins	335
7.14. Germination	337
7.15. Activities in the Stationary Phase	340
7.16. Global Regulation	341
7.16.1. The crp Modulon	342
7.16.2. The Stringent Response	343
References	344
Additional Reading	346
8. Physiological Basis for Growth in Extreme Environments	348
8.1. Introduction	348
8.2. Moderate Thermophiles and Hyperthermophiles	350
8.2.1. Thermostability of Proteins	351
8.2.2. Cytoplasmic Protectants	352
8.2.3. Membrane Lipids	353
8.3. Bacteria in Extreme Hydrogen Ion Concentrations	354
8.3.1. pH Homeostasis and Membrane Charge	354
8.3.2. Acidophilic and Acid-Tolerant Bacteria	357
8.3.2.1. Metabolic Response	357
8.3.2.2. Decarboxylase Reactions	358
8.3.3. Alkaliphilic Microorganisms	359
8.3.3.1. Physiological Characteristics	360
8.3.3.2. Biotechnology Applications	360
8.4. Halophilic Microorganisms	361
8.5. Psychophilic Organisms	363
8.6. Irradiation-Resistant Organisms	364
8.6.1. Ultraviolet Light	365
8.6.2. Ionizing Radiation	367
8.7. Osmotic Balance and Osmotic Stress	369
8.7.1. Compatible Solutes	369
8.7.2. Osmotic Stress Response	369
8.7.3. Hypoosmotic Shock	372
8.8. Barophilic Bacteria	373
8.9. Water Activity and Desiccation Tolerance	374
8.10. Temperature Stress Response	377
8.10.1. Heat Shock Response	377
8.10.2. Cold Shock Response	379
8.11. Transient to Prolonged Exposures	380
8.11.1. Starvation-Stress Response	380
8.11.2. Oxidative Stress Response	382
8.11.3. Anaerobic Response	385

8.11.4. Solvent Stress Response	387
References	389
Additional Reading	391

IV. Bioenergetics 395

9. Electron Transport and Coupled Phosphorylation	397
9.1. Introduction	397
9.2. Systems for Movement of Electrons	398
9.2.1. Electron Donors for Chemoorganotrophs	400
9.2.1.1. Succinate Dehydrogenase	400
9.2.1.2. Glycerol-3-P Dehydrogenase	400
9.2.1.3. NADH Dehydrogenase	401
9.2.1.4. D-Lactate Dehydrogenase	402
9.2.1.5. Formate Dehydrogenase	402
9.2.1.6. PQQ-Containing Dehydrogenases	403
9.2.1.7. Pyruvate Oxidase	404
9.2.2. Electron Donors for Chemolithotrophs	404
9.2.2.1. Hydrogenase	404
9.2.2.2. Carbon Monoxide Oxidoreductase	406
9.2.2.3. Ferrous as an Electron Donor	407
9.2.2.4. Sulfur Compounds	409
9.2.2.5. Nitrogen Compounds	410
9.2.2.6. Other Metal Oxidases	411
9.2.3. Quinones as Electron Carriers	412
9.2.4. Proteins as Electron Carriers	414
9.2.4.1. Ferredoxin	415
9.2.4.2. Flavodoxin	416
9.2.4.3. Copper Blue Protein	417
9.2.5. Cytochromes	418
9.2.5.1. <i>b</i> -Type and <i>c</i> -Type Cytochromes	421
9.2.5.2. Oxidases	424
9.2.5.3. Distribution	425
9.2.6. Electron Acceptors	426
9.2.6.1. Molecular Oxygen: Oxidases	426
9.2.6.2. Fumarate Reductase	427
9.2.6.3. TMANO Reductase	427
9.2.6.4. DMSO Reductase	427
9.2.6.5. Respiratory Nitrate Reductase	428
9.2.6.6. Respiratory Nitrite Reductase	428
9.2.6.7. Respiratory Sulfate and Sulfur Reduction	428
9.2.6.8. Other Electron Acceptors	430
9.3. Organization of the Respiratory System	431
9.3.1. Generation of Proton-Motive Force	434
9.3.2. Proton Transduction Sites	435

9.3.2.1. Site 0	436
9.3.2.2. Site 1	436
9.3.2.3. Site 2	437
9.3.2.4. Site 3	438
9.3.2.5. Sites in Anaerobic Respiration	438
9.4. Demonstration of Phosphorylation Coupled to Electron Flow	439
9.4.1. F-Type ATPase	440
9.4.2. V-Type ATPase	442
9.4.3. ATP Synthesis and Hydrolysis	442
9.5. Assessments and Measurements	443
9.5.1. Inhibitors of Electron Transport	443
9.5.2. Artificial Electron Acceptors and Carriers	443
9.5.3. Protonophores as Uncoupling Agents	444
9.5.4. Measuring Membrane Charge or ΔpH	445
9.6. Unique Events in Bacterial Respiration	447
9.6.1. Reverse Electron Flow	447
9.6.2. Proton Cycling	448
9.6.3. Interspecies Hydrogen Transfer	449
9.7. Electron Transport and Chlorophyll-Containing Photosynthesis	450
9.7.1. Oxygenic Photosynthesis	451
9.7.2. Anaerobic Photosynthesis	454
9.7.2.1. Purple Phototrophs	456
9.7.2.2. Green Phototrophs	458
9.8. Chlorophyll-Containing Aerobes	460
9.9. Paradigm of Prokaryotic Bioenergetics	462
References	464
Additional Reading	467
10. Transmembrane Movement: Mechanisms and Examples	468
10.1. Introduction	468
10.2. Diffusion Systems	470
10.2.1. Passive Diffusion	470
10.2.2. Facilitated Diffusion	471
10.2.3. Accumulation of Solute	471
10.3. Chemiosmotic Activities	472
10.3.1. Proton-Motive Force	472
10.3.2. Proton-Coupled Transport	475
10.3.3. Na^+ Ion Gradients	476
10.4. Transporter ATPases	478
10.4.1. P-Type ATPases	478
10.4.2. A-Type ATPases	480
10.5. ABC Transporters	480
10.5.1. Binding Proteins and ABC Importers	481
10.5.2. ABC Systems for Export	482

10.6. Group Translocation System	482
10.6.1. Phosphotransferase System	482
10.6.2. Transport of Non-Sugar Solutes	484
10.7. Transport in Response to Osmotic Pressure	485
10.7.1. Aquaporins	485
10.7.2. Gated Channels	486
10.8. Characteristics of Selected Transport Systems	486
10.8.1. Cations	487
10.8.1.1. Iron Uptake	489
10.8.1.2. Magnesium Transport	494
10.8.1.3. Manganese Transport	495
10.8.1.4. Calcium Transport	496
10.8.1.5. Nickel Transport	497
10.8.1.6. Copper Transport	497
10.8.1.7. Zinc Transport	498
10.8.1.8. Cation Anteporters	500
10.8.1.9. Transport of Ammonium	501
10.8.2. Anions	502
10.8.2.1. Nitrate and Nitrite Transport	502
10.8.2.2. Sulfate Transport	504
10.8.2.3. Phosphate Transport Systems	504
10.8.2.4. Molybdenum Transport	506
10.8.2.5. Anion Anteporters	506
10.8.3. Sugars	508
10.8.4. Amino Acids and Peptides	508
10.8.4.1. Amino Acid Transport	509
10.8.4.2. Peptide Transport	512
10.8.5. Uptake Systems for Drugs and Antibiotics in Bacteria	514
10.8.6. DNA Uptake	516
10.8.7. Vitamin B ₁₂ Transport	519
10.9. Grouping of Transport Activities	520

12.6.1.2.	Formation of the Replication Fork	633
12.6.1.3.	Elongation of the Copied DNA	635
12.6.1.4.	Supercoiling and Topoisomerases	636
12.6.1.5.	Rolling Circle Replication	637
12.6.2.	RNA Synthesis	638
12.6.2.1.	Synthesis of tRNA	639
12.6.2.2.	Synthesis of rRNA	642
12.6.2.3.	Synthesis of mRNA	643
12.6.2.4.	Enzymes of RNA Synthesis	644
12.7.	Ribosomal Mediated Process	646
12.7.1.	Ribosome Architecture	647
12.7.2.	Protein Synthesis	648
12.7.2.1.	Initiation Phase	648
12.7.2.2.	Elongation Phase	651
12.7.2.3.	Termination Phase	653
12.7.2.4.	Inhibition by Antibiotics	654
12.8.	Systems for Secretion of Proteins and Other Biomolecules	656
12.8.1.	Type I: ABC Secretion System	656
12.8.2.	Type II: Signal Peptides	659
12.8.3.	Type III: Needle-Like Structures	662
12.8.4.	Type IV: Pilus-Like Secretion	663
12.9.	Posttranslational Modifications of Proteins	664
12.9.1.	Glycoproteins	665
12.9.2.	Modification of Amino Acids	666
12.9.3.	Lantibiotics	666
12.9.4.	Active Site of Sulfatases	668
12.9.5.	Changes in Spore Coat Proteins	669
12.9.6.	Phosphorylation of Proteins	670
12.10.	Histone-Like Proteins	670

12.11. Heme Synthesis	671
12.12. Global Regulators	673
References	675
Additional Reading	678
13. Metabolism of Nitrogen and Sulfur	680
13.1. Introduction	680
13.2. The Nitrogen Cycle	680
13.2.1. Dinitrogen Fixation	682
13.2.2. Assimilatory Nitrate Reduction	685
13.2.3. Assimilation of Ammonia	686
13.2.4. Dissimilatory Nitrate Reduction	689
13.2.4.1. Nitrate Reductase	690
13.2.4.2. Nitrite Reductase	692
13.2.4.3. Nitric Oxide (NO) Reductase	693
13.2.4.4. Nitrous Oxide (N ₂ O) Reductase	693
13.3. Dissimilatory Nitrite Reduction	694
13.4. Nitrification	695
13.4.1. Aerobic Ammonia Oxidation	695
13.4.2. Hydroxylamine Oxidoreductase	698
13.4.3. Nitrite Oxidation	699
13.4.4. Anaerobic Ammonium Oxidation	700
13.5. The Sulfur Cycle	700
13.5.1. Sulfate Reduction	700
13.5.1.1. Assimilatory Sulfate Reduction	701
13.5.1.2. Dissimilatory Sulfate Reduction	705
13.5.1.3. Energetics of Sulfate Activation	707
13.6. Dissimilatory Sulfur Reduction	708
13.7. Dissimilatory Sulfide Oxidation by Photosynthetic Sulfur Bacteria	710
13.8. Autotrophic Oxidation of Sulfur Compounds	710
13.8.1. Oxidation of Elemental Sulfur	711
13.8.2. Oxidation of Thiosulfate and Polythionates	712
13.8.3. Oxidation of Sulfite	713
13.9. Isotope Fractionation	714
13.10. Fermentation of Thiosulfate and Sulfite	715
13.11. Organic Sulfur Compounds	716
References	717
Additional Reading	719
14. Biometals	721
14.1. Introduction	721
14.2. Bacteria–Metal Interaction	722
14.2.1. Biological Requirements for Metals	722

14.2.1.1.	Mg ²⁺	725
14.2.1.2.	Ca ²⁺	726
14.2.1.3.	K ⁺	726
14.2.1.4.	Na ⁺	727
14.2.1.5.	Transition Metals	727
14.2.2.	Geochemical Cycles	729
14.2.2.1.	Fe Reactions	730
14.2.2.2.	Mn Activities	735
14.2.2.3.	Mineralization	738
14.2.2.4.	Biogenic Formations	740
14.2.2.5.	Microbial Leaching	741
14.2.3.	Metal Mimicry	743
14.2.4.	Detoxification Processes	744
14.2.4.1.	Binding and Biosorption	744
14.2.4.2.	Precipitation Reactions	747
14.2.4.3.	Export Systems	748
14.2.4.4.	Methylation Reactions	748
14.2.4.5.	Metallothionein and Metal Sensors	748
14.3.	Metabolism of Selected Metalloids and Metals	751
14.3.1.	Iron	751
14.3.1.1.	Cytotoxic Reactions	752
14.3.1.2.	Ferritin	752
14.3.1.3.	Bacterioferritin	754
14.3.2.	Selenium	755
14.3.2.1.	Selenoproteins	755
14.3.2.2.	Selenium-Containing tRNA	757
14.3.2.3.	Selenocysteine Synthesis	758
14.3.2.4.	Selenomethionine Synthesis	758
14.3.2.5.	Dissimilatory Reduction	758
14.3.2.6.	Toxicity	760
14.3.3.	Mercury	760
14.3.3.1.	Reduction and the <i>mer</i> Operon	760
14.3.3.2.	Methylation Reactions	763
14.3.4.	Arsenic	763
14.3.4.1.	Arsenate Detoxification	763
14.3.4.2.	Arsenite Metabolism	765
14.3.4.3.	Reduction	765
14.3.5.	Chromium	766
14.3.5.1.	Transport Systems	766
14.3.5.2.	Chromate Reduction	766
14.3.5.3.	Toxicity	767
14.3.6.	Cadmium	767
14.3.7.	Uranium	769
14.3.8.	Silver Resistance	770
