Fundamentals of Powder Diffraction and Structural Characterization of Materials

Vitalij K. Pecharsky and Peter Y. Zavalij

Kluwer Academic Publishers

Contents

Preface xvii

1. FUNDAMENTALS OF CRYSTALLINE STATE 1

1.1 Introduction 1

1.2 Crystalline state 2

1.3 Crystal lattice and crystal structure 4
1.3.1 Shape of the unit cell 6
1.3.2 Content of the unit cell 7
1.3.3 Asymmetric part of the unit cell 8

1.4 Symmetry operations and symmetry elements 10

1.5 Finite symmetry elements 12
1.5.1 One-fold rotation axis and center of inversion 16
1.5.2 Two-fold rotation axis and mirror plane 16
1.5.3 Three-fold rotation axis and three-fold inversion axis 17
1.5.4 Four-fold rotation axis and four-fold inversion axis 18
1.5.5 Six-fold rotation axis and six-fold inversion axis 18

1.6 Interaction of symmetry elements 19
1.6.1 Symmetry groups 21
1.6.2 Generalization of interactions between finite symmetry elements . 22

1.7 Fundamentals of group theory 24

1.8 Crystal systems 26

1.9 Stereographic projections 27
1.10 Crystallographic point groups 29
1.11 Laue classes 31
1.12 Selection of a unit cell and Bravais lattices 32
1.13 Infinite symmetry elements 39
1.13.1 Glide planes 40
1.13.2 Screw axes 42
1.13.3 Interaction of infinite symmetry elements 43
1.14 Crystallographic planes, directions and indices 45
1.14.1 Indices of planes 46
1.14.2 Lattice directions and indices 49
1.15 Reciprocal lattice 50
1.16 Crystallographic space groups 53
1.16.1 Relationships between space and point groups 53
1.16.2 Full international symbols of crystallographic space groups 56
1.16.3 Visualization of space group symmetry in three dimensions 58
1.16.4 Space groups in nature 59
1.17 International Tables for Crystallography 60
1.18 Equivalent positions 65
1.18.1 General and special equivalent positions 66
1.18.2 Special sites with points located on mirror planes 66
1.18.3 Special sites with points located on rotation or inversion axes 67
1.18.4 Special sites with points located on centers of inversion 68
1.19 Symbolic description of symmetry operations 69
1.19.1 Finite symmetry operations 70
1.19.2 Infinite symmetry operations 71
1.20 Algebraic treatment of symmetry operations 72
1.20.1 Transformations of coordinates of a point 72
1.20.2 Rotational transformations of vectors 77
1.20.3 Translational transformations of vectors 78
1.20.4 Combined symmetrical transformations of vectors 79
1.20.5 Augmented matrices 81
1.20.6 Algebraic representation of crystallographic symmetry 82
1.20.7 Interactions between symmetry operations 86
1.21 Non-conventional symmetry 88
1.21.1 Commensurate modulation 88
1.21.2 Incommensurate modulation 90

1.21.3 Quasicrystals 91
1.22 Additional reading 94
1.23 Problems 95

2. FUNDAMENTALS OF DIFFRACTION 99
2.1 Introduction 99
2.2 Properties and sources of radiation 102
2.2.1 Nature and properties of x-rays 102
2.2.2 Production of x-rays 104
2.2.3 Conventional sealed x-ray sources 105
2.2.4 Continuous and characteristic x-ray spectra 107
2.2.5 Rotating anode x-ray sources 110
2.2.6 Synchrotron radiation sources 112
2.2.7 Other types of radiation 113
2.3 Collimation and monochromatization 115
2.3.1 Angular divergence and collimation 116
2.3.2 Monochromatization 119
2.4 Detection of x-rays 128
2.4.1 Detector efficiency, linearity, proportionality and resolution 128
2.4.2 Classification of detectors 130
2.4.3 Point detectors 132
2.4.4 Line and area detectors 136
2.5 Scattering by electrons, atoms and lattices 138
2.5.1 Scattering by electrons 140
2.5.2 Scattering by atoms and scattering factor 143
2.5.3 Scattering by lattices 145
2.6 Geometry of diffraction by lattices 146
2.6.1 Laue equations and Braggs' law 147
2.6.2 Reciprocal lattice and Ewald's sphere 149
2.7 Origin of the powder diffraction pattern 153
2.7.1 Representation of powder diffraction patterns 158
2.7.2 Understanding of powder diffraction patterns 161
2.8 Positions of powder diffraction peaks 164
2.8.1 Peak positions as a function of unit cell dimensions 164
2.8.2 Other factors affecting peak positions 167
2.9 Shapes of powder diffraction peaks 171
2.9.1 Peak shape functions 173

2.9.2 Peak asymmetry 182

2.10 Intensity of powder diffraction peaks 184
2.10.1 Integrated intensity 185
2.10.2 Scale factor 188
2.10.3 Multiplicity factor 189
2.10.4 Lorentz-polarization factor 190
2.10.5 Absorption factor 193
2.10.6 Preferred orientation 196
2.10.7 Extinction factor 202

2.11 Structure factor 203
2.11.1 Structure amplitude 203
2.11.2 Population factor 204
2.11.3 Temperature factor 207
2.11.4 Atomic scattering factor 212
2.11.5 Phase angle 216

2.12 Effects of symmetry on the structure amplitude 218
2.12.1 Friedel pairs and Friedel's law 219
2.12.2 Friedel's law and multiplicity factor 221
2.12.3 Systematic absences 222
2.12.4 Space groups and systematic absences 227

2.13 Fourier transformation 237

2.14 Phase problem 243
2.14.1 Patterson technique 245
2.14.2 Direct methods 249
2.14.3 Structure solution from powder diffraction data 253

2.15 Additional reading 256

2.16 Problems 258

3. EXPERIMENTAL TECHNIQUES 261

3.1 Introduction 261

3.2 Brief history of the powder diffraction method 262

3.3 Powder diffractometers 267
3.3.1 Principles of goniometer design in powder diffractometry 269
3.3.2 Goniostats with point detectors 273
3.3.3 Goniostats with area detectors 276

3.4 Safety 279
3.4.1 Radiation quantities and terms 280

3.4.2 Biological effects of ionizing radiation 281
3.4.3 Exposure limits 282
3.4.4 Radiation hazards of analytical x-ray systems 283
3.4.5 Hazard control measures for analytical x-ray systems 284

3.5 Sample preparation 287
3.5.1 Powder requirements and powder preparation 287
3.5.2 Powder mounting 290
3.5.3 Sample size 295
3.5.4 Sample thickness and uniformity 297
3.5.5 Positioning the sample with respect to the goniometer axis 298
3.5.6 Effects of sample preparation on powder diffraction data 301

3.6 Data acquisition 305
3.6.1 Wavelength selection 305
3.6.2 Monochromatization 306
3.6.3 Incident beam aperture 309
3.6.4 Diffracted beam aperture 313
3.6.5 Variable aperture 316
3.6.6 Power settings 317
3.6.7 Classification of powder diffraction experiments 318
3.6.8 Step scan 319
3.6.9 Continuous scan 322
3.6.10 Scan range 324

3.7 Quality of experimental data 326
3.7.1 Quality of intensity measurements 328
3.7.2 Factors affecting resolution 331

3.8 Additional reading 333

3.9 Problems 335

4. PRELIMINARY DATA PROCESSING AND PHASE ANALYSIS 339

4.1 Introduction 339

4.2 Interpretation of powder diffraction data 340

4.3 Preliminary data processing 345
4.3.1 Background 347
4.3.2 Smoothing 352
4.3.3 $K\alpha_2$ stripping 354
4.3.4 Peak search 356
4.3.5 Profile fitting 360

4.4 Phase identification and analysis 371

4.4.1 Crystallographic databases 372
4.4.2 Phase identification and qualitative analysis 377
4.4.3 Quantitative analysis 384

4.5 Additional reading 390

4.6 Problems 392

5. UNIT CELL DETERMINATION AND REFINEMENT 399

5.1 Introduction 399

5.2 The indexing problem 399

5.3 Known versus unknown unit cell dimensions 402

5.4 Indexing: known unit cell 405
5.4.1 High symmetry indexing example 407
5.4.2 Other crystal systems 413

5.5 Reliability of indexing 415
5.5.1 The F_N figure of merit 418
5.5.2 The M_{20} figure of merit 419

5.6 Introduction to *ab initio* indexing 420

5.7 Cubic crystal system 422
5.7.1 Primitive cubic unit cell: LaB_6 425
5.7.2 Body-centered cubic unit cell: $U_3Ni_6Si_2$ 427

5.8 Tetragonal and hexagonal crystal systems 429
5.8.1 Indexing example: $LaNi_{4.85}Sn_{0.15}$ 433

5.9 Automatic *ab initio* indexing algorithms 436
5.9.1 Trial-and-error method 438
5.9.2 Zone search method 439

5.10 Unit cell reduction algorithms 440
5.10.1 Delaunay-Ito reduction 441
5.10.2 Niggli reduction 442

5.11 Automatic *ab initio* indexing: computer codes 443
5.11.1 TREOR 444
5.11.2 DICVOL 447
5.11.3 ITO 448
5.11.4 Selecting a solution 449

5.12 *Ab initio* indexing examples 451
5.12.1 Hexagonal indexing: $LaNi_{4.85}Sn_{0.15}$ 451
5.12.2 Monoclinic indexing: $(CH_3NH_3)_2Mo_7O_{22}$ 457

5.12.3 Triclinic indexing: $Fe_7(PO_4)_6$ 460

5.13 Precise lattice parameters and linear least squares 464
5.13.1 Linear least squares 466
5.13.2 Precise lattice parameters from linear least squares 469

5.14 Epilogue 479

5.15 Additional reading 481

5.16 Problems 482

6. CRYSTAL STRUCTURE DETERMINATION 493

6.1 Introduction 493

6.2 *Ab initio* methods of structure solution 494
6.2.1 Conventional reciprocal space techniques 495
6.2.2 Conventional direct space techniques 495
6.2.3 Unconventional reciprocal and direct space strategies 496
6.2.4 Validation and completion of the model 499

6.3 The content of the unit cell 500

6.4 Pearson's classification 503

6.5 Structure factors from powder diffraction data 504

6.6 Non-linear least squares 507

6.7 Figures of merit in full pattern decomposition 512

6.8 Structure solution from powder data 515

6.9 Crystal structure of $LaNi_{4.85}Sn_{0.15}$ 516

6.10 Crystal structure of $CeRhGe_3$ from x-ray data 530

6.11 Crystal structure of $CeRhGe_3$ from neutron data 541

6.12 Crystal structure of Nd_5Si_4 548

6.13 Crystal structure of $NiMnO_2(OH)$ 553

6.14 Crystal structure of *tma*V_3O_7 561

6.15 Crystal structure of *ma*$_2Mo_7O_{22}$ 568

6.16 Crystal structure of $Mn_7(OH)_3(VO_4)_4$ 571

6.17 Crystal structure of $FePO_4$ 575

6.18 Empirical methods of solving crystal structures 580
6.18.1 Crystal structure of Gd_5Ge_4 583

6.18.2 Crystal structure of Gd_5Si_4 585
6.18.3 Crystal structure of $Gd_5Si_2Ge_2$ 587

6.19 Additional reading 591

6.20 Problems 594

7. CRYSTAL STRUCTURE REFINEMENT 599

7.1 Introduction 599

7.2 The Rietveld method 601
7.2.1 Rietveld method basics 603
7.2.2 Classes of Rietveld parameters 606
7.2.3 Figures of merit and quality of refinement 608
7.2.4 Termination of Rietveld refinement 609

7.3 Rietveld refinement of $LaNi_{4.85}Sn_{0.15}$ 610
7.3.1 Scale factor and profile parameters 611
7.3.2 Overall atomic displacement parameter 614
7.3.3 Individual parameters, free and constrained variables 614
7.3.4 Anisotropic atomic displacement parameters 617
7.3.5 Multiple phase refinement 617
7.3.6 Refinement results 618
7.3.7 Different radiation 619
7.3.8 Combined refinement using different diffraction data 623

7.4 Rietveld refinement of $CeRhGe_3$ 628
7.4.1 Refinement using x-ray diffraction data 628
7.4.2 Refinement using neutron diffraction data 632

7.5 Rietveld refinement of Nd_5Si_4 635

7.6 Rietveld refinement using GSAS 639

7.7 Completion of the model and Rietveld refinement of $NiMnO_2(OH)$ 643

7.8 Completion of the model and Rietveld refinement of *tma*V_3O_7 654

7.9 Rietveld refinement and completion of the *ma*$_2Mo_7O_{22}$ structure 662

7.10 Rietveld refinement of $Mn_7(OH)_3(VO_4)_4$ 669

7.11 Rietveld refinement of the monoclinic $FePO_4$ 677

7.12 Rietveld refinement of Gd_5Ge_4, Gd_5Si_4 and $Gd_5Si_2Ge_2$ 684
7.12.1 Gd_5Ge_4 685
7.12.2 Gd_5Si_4 687
7.12.3 $Gd_5Si_2Ge_2$ 692

7.13 Epilogue 697
7.14 Additional reading 699
7.15 Problems 700
Index 703
