

COMPUTER MODELING FOR ENVIRONMENTAL MANAGEMENT SERIES

COMPUTER SIMULATED PLANT DESIGN for WASTE MINIMIZATION/POLLUTION PREVENTION

Stan Bumble

Table of Contents

Part I. Pollution Prevention and Waste Minimization

1.1	Chemical Process Structures and Information Flow	1
1.2	Analysis Synthesis & Design of Chemical Processes	1
1.3	Strategy and Control of Exhausts	2
1.4	Chemical Process Simulation Guide	5
1.5	Integrated Design of Reaction and Separation Systems for Waste Minimization	6
1.6	A Review of Computer Process Simulation in Industrial Pollution Prevention	7
1.7	EPA Inorganic Chemical Industry Notebook Section V	11
1.8	Models	11
1.9	Process Simulation Seen as Pivotal in Corporate Information Flow	12
1.10	Model-Based Environmental Sensitivity Analysis for Designing a Clean Process Plant	13
1.11	Pollution Prevention in Design: Site Level Implementation Strategy For DOE	13
1.12	Pollution Prevention in Process Development and Design	14
1.13	Pollution Prevention	15
1.14	Pollution Prevention Research Strategy	16
1.15	Pollution Prevention Through Innovative Technologies and Process Design at UCLA's Center for Clean Technology	17
1.16	Assessment of Chemical Processes with Regard to Environmental, Health, and Safety Aspects in Early Design Phases	19
1.17	Small Plants, Pollution and Poverty: New Evidence from Brazil and Mexico	20
1.18	When Pollution Meets the Bottom Line	20
1.19	Pollution Prevention as Corporate Entrepreneurship	20
1.20	Plantwide Controllability and Flowsheet Structure of Complex Continuous Process Plants	21
1.21	Development of COMPAS	21
1.22	Computer-Aided Design of Clean Processes	21
1.23	Computer-Aided Chemical Process Design for P2	23
1.24	LIMN-The Flowsheet Processor	23
1.25	Integrated Synthesis and Analysis of Chemical Process Designs Using Heuristics in the Context of Pollution Prevention	23
1.26	Model-Based Environmental Sensitivity Analysis for Designing a Clean Process Plant	23
1.27	Achievement of Emission Limits Using Physical Insights and Mathematical Modeling	24
1.28	Fritjof Capra's Foreword to <i>Upsizing</i>	24
1.29	ZERI Theory	24
1.30	SRI's Novel Chemical Reactor - PERMIX	25
1.31	Process Simulation Widens the Appeal of Batch Chromatography	25
1.32	About Pollution Prevention	25
1.33	Federal Register/Vol. 62, No. 120/Monday, June 23, 1997/Notices/33868	26
1.34	EPA Environmental Fact Sheet, EPA Releases RCRA Waste Minimization PBT Chemical List ...	26
1.35	ATSDR	27
1.36	OSHA Software/Advisors	27
1.37	Environmental Monitoring for Public Access and Community Tracking	27
1.38	Health: The Scorecard That Hit a Home Run	28
1.39	Screening and Testing for Endocrine Disruptors	28
1.40	Reducing Risk	28
1.41	Risk: A Human Science	32
1.42	IPPS	35

Part II. Mathematical Methods

2.1	Linear Programming.....	37
2.2	The Simplex Model.....	37
2.3	Quadratic Programming.....	37
2.4	Dynamic Programming.....	37
2.5	Combinatorial Optimization	37
2.6	Elements of Graph Theory	37
2.7	Organisms and Graphs	38
2.8	Trees and Searching	38
2.9	Network Algorithms	38
2.10	Extremal Problems	38
2.11	Traveling Salesman Problem (TSP)-Combinatorial Optimization	38
2.12	Optimization Subject to Diophantine Constraints	39
2.13	Integer Programming.....	39
2.14	MINLP	39
2.15	Clustering Methods	39
2.16	Simulated Annealing.....	39
2.17	Tree Annealing	40
2.18	Global Optimization Methods	40
2.19	Genetic Programming.....	41
2.20	Molecular Phylogeny Studies	42
2.21	Adaptive Search Techniques	42
2.22	Advanced Mathematical Techniques	42
2.23	Scheduling of Processes for Waste Minimization	42
2.24	Multisimplex	43
2.25	Extremal Optimization (EO)	43
2.26	Petri Nets and SYNPROPS	43
2.27	Petri Net-Diagraph Models for Automating HAZOP Analysis of Batch Process Plants	43
2.28	DuPont CRADA	45
2.29	KBDS-(Using Design History to Support Chemical Plant Design)	45
2.30	Dependency-Directed Backtracking	45
2.31	Best Practice: Interactive Collaborative Environments	46
2.32	The Control Kit for O-Matrix.....	46
2.33	The Clean Process Advisory System: Building Pollution Into Design	47
2.34	Nuclear Facility Design Considerations That Incorporate WM/P2 Lessons Learned.....	47
2.35	Pollution Prevention Process Simulator	48
2.36	Reckoning on Chemical Computers	48

Part III. Computer Programs for Pollution Prevention and/or Waste Minimization

3.1	Pollution Prevention Using Chemical Process Simulation	51
3.2	Introduction to the Green Design	51
3.3	Chemicals and Materials from Renewable Resources	52
3.4	Simulation Sciences	52
3.5	EPA/NSF Partnership for Environmental Research	53
3.6	BDK-Integrated Batch Development.....	54
3.7	Process Synthesis	54
3.8	Symphony	56
3.9	Process Design and Simulations	56
3.10	Robust Self-Assembly Using Highly Designable Structures and Self-Organizing Systems	57
3.11	Self-Organizing Systems	58
3.12	Mass Integration	58
3.13	Synthesis of Mass Energy Integration Networks for Waste Minimization via In-Plant Modification.....	59

3.14	Process Design	59
3.15	Pollution Prevention by Reactor Network Synthesis	59
3.16	LSSENS	60
3.17	Chemkin	60
3.18	Computer Simulation, Modeling and Control of Environmental Quality	62
3.19	Multiobjective Optimization	62
3.20	Risk Reduction Through Waste Minimizing Process Synthesis	63
3.21	Kintecus	65
3.22	SWAMI	66
3.23	SuperPro Designer	66
3.24	P2-EDGE Software	66
3.25	CWRT Aqueous Stream Pollution Prevention Design Options Tool	68
3.26	OLI Environmental Simulation Program (ESP)	68
3.27	Process Flowsheeting and Control	68
3.28	Environmental Hazard Assessment for Computer-Generated Alternative Syntheses	69
3.29	Process Design for Environmentally and Economically Sustainable Dairy Plant	69
3.30	Life Cycle Analysis (LCA)	69
3.31	Computer Programs	70
3.32	Pollution Prevention by Process Modification Using On-Line Optimization	73
3.33	A Genetic Algorithm for the Automated Generation of Molecules Within Constraints	73
3.34	WMCAPS	73

Part IV. Computer Programs for the Best Raw Materials and Products of Clean Processes

4.1	Cramer's Data and the Birth of Synprops	75
4.2	Physical Properties form Groups	75
4.3	Examples of SYNPROPS Optimization and Substitution	76
4.4	Toxic Ignorance	77
4.5	Toxic Properties from Groups	78
4.6	Rapid Responses	78
4.7	Aerosols Exposed	79
4.8	The Optimizer Program	82
4.9	Computer Aided Molecular Design (CAMD): Designing Better Chemical Products	82
4.10	Reduce Emissions and Operating Costs with Appropriate Glycol Selection	83
4.11	Texaco Chemical Company Plans to Reduce HAP Emissions Through Early Reduction Program by Vent Recovery System	83
4.12	Design of Molecules with Desired Properties by Combinatorial Analysis	83
4.13	Mathematical Background I	84
4.14	Automatic Molecular Design Using Evolutionary Techniques	84
4.15	Algorithmic Generation of Feasible Partitions	85
4.16	Testsmart Project to Promote Faster, Cheaper, More Humane Lab Tests	85
4.17	European Cleaner Technology Research	86
4.18	Cleaner Synthesis	87
4.19	THERM	92
4.20	Design Trade-Offs for Pollution Prevention	92
4.21	Programming Pollution Prevention and Waste Minimization Within a Process Simulation Program	92
4.22	Product and Process Design Tradeoffs for Pollution Prevention	94
4.23	Incorporating Pollution Prevention into U.S. Department of Energy Design Projects	94
4.24	EPA Programs	94
4.25	Searching for the Profit in Pollution Prevention: Case Studies in the Corporate Evaluation of Environmental Opportunities	95
4.26	Chemical Process Simulation, Design, and Economics	95
4.27	Pollution Prevention Using Process Simulation	95
4.28	Process Economics	95

4.29	Pinch Technology	95
4.30	GIS	96
4.31	Health	96
4.32	Scorecard-Pollution Rankings	97
4.33	HAZOP and Process Safety	98
4.34	Safer by Design	98
4.35	Design Theory and Methodology	101

Part V. Pathways to Prevention

5.1	The Grand Partition Function	103
5.2	A Small Part of the Mechanisms from the Department of Chemistry of Leeds University	103
5.3	REACTION: Modeling Complex Reaction Mechanisms	106
5.4	Environmentally Friendly Catalytic Reaction Technology	107
5.5	Enabling Science	107
5.6	Greenhouse Emissions	110
5.7	Software Simulations Lead to Better Assembly Lines	110
5.8	Cumulants	111
5.9	Generating Functions	111
5.10	ORDKIN a Model of Order and Kinetics for the Chemical Potential of Cancer Cells	111
5.11	What Chemical Engineers Can Learn from Mother Nature	114
5.12	Design Synthesis Using Adaptive Search Techniques & Multi-Criteria Decision Analysis	114
5.13	The Path Probability Method	114
5.14	The Method of Steepest Descents	116
5.15	Risk Reduction Engineering Laboratory/ Pollution Prevention Branch Research (RREL/PPBR)	117
5.16	The VHDL Process	118

Conclusions	119
