

PRINCIPLES
OF
INORGANIC
MATERIALS
DESIGN

John N. Lalena • David A. Cleary

CONTENTS

Foreword	xi
Preface	xv
1. The Mesoscale	1
1.1 Interfaces in Polycrystals	2
1.2 Solidified Metals and Alloys	19
1.3 Ceramic Powder Aggregates	33
1.4 Thin-Film Microstructure	39
2. Crystal Structure and Bonding	45
2.1 Structure Description Methods	45
2.2 Cohesive Forces in Solids	53
2.3 Structural Energetics	58
2.4 Common Structure Types	72
2.5 Structural Disturbances	98
2.6 Structural Control and Synthetic Strategies	108
3. The Electronic Level, I: An Overview of Band Theory	117
3.1 The Many-Body Schrödinger Equation	117
3.2 Bloch's Theorem	120
3.3 Reciprocal Space	123
3.4 A Choice of Basis Sets	127
3.5 Understanding Band-Structure Diagrams	133
3.6 Breakdown of the Independent Electron Approximation	137
3.7 Density Functional Theory: An Alternative to the Hartree-Fock Approach	138
4. The Electronic Structure, II: The Tight-Binding Approximation	141
4.1 The General LCAO Method	141
4.2 Extension of the LCAO Method to Crystalline Solids	147
4.3 Orbital Interactions in Monatomic Solids	150

4.4	Tight-Binding Assumptions	159
4.5	Qualitative LCAO Band Structures	162
4.6	Total Energy Tight-Binding Calculations	176
5.	Transport Properties	179
5.1	An Introduction to Tensors	179
5.2	Thermal Conductivity	183
5.3	Electronic Conductivity	189
5.4	Atomic Transport	197
6.	Metal–Nonmetal Transitions	207
6.1	Correlated Systems	209
6.2	Anderson Localization	217
6.3	Experimentally Distinguishing Electron Correlation from Disorder	222
6.4	Tuning the Metal–Nonmetal Transition	225
6.5	Other Types of Electronic Transitions	228
7.	Magnetic and Dielectric Properties	233
7.1	Macroscopic Magnetic Behavior	233
7.2	Atomic Origin of Paramagnetism	238
7.3	Spontaneous Magnetic Ordering	245
7.4	Magnetotransport Properties	258
7.5	Magnetostriction	263
7.6	Dielectric Properties	263
8.	Optical Properties of Materials	273
8.1	Maxwell's Equations	273
8.2	Refractive Index	277
8.3	Absorption	286
8.4	Nonlinear Effects	292
8.5	Summary	296
9.	Mechanical Properties	299
9.1	Basic Definitions	299
9.2	Elasticity	302
9.3	Plasticity	316
9.4	Fracture	330
10.	Phase Equilibria, Phase Diagrams, and Phase Modeling	335
10.1	Thermodynamic Systems, Phases, and Components	336
10.2	The First and Second Laws of Thermodynamics	338

10.3 Understanding Phase Diagrams	341
10.4 Experimental Phase-Diagram Determinations	352
10.5 Phase-Diagram Modeling	353
11. An Introduction to Nanomaterials	369
11.1 History of Nanotechnology	370
11.2 Properties of Matter at the Nanoscale	372
12. Synthetic Strategies	383
12.1 Synthetic Strategies	384
12.2 Summary	408
Index	413
