

 WILEY

**MOLECULAR SIMULATION METHODS
FOR PREDICTING POLYMER PROPERTIES**

Edited by **VASSILIOS GALIATSATOS**

CONTENTS

Preface

vii

Vassilios Galiatsatos

1. *Ab Initio* Polymer Quantum Theory

1

Benoît Champagne

Laboratoire de Chimie Théorique Appliquée,
Facultés Universitaires Notre-Dame de la Paix,
rue de Bruxelles 61, B-5000 Namur, Belgium

2. Quantum-Chemistry-Based Force Fields For Polymers

47

Grant D. Smith and Oleg Borodin

University of Utah, Salt Lake City, Utah, USA

3. Monte Carlo Simulations of Binary Polymer Liquids

95

Marcus Müller

Institut für Physik, WA331, Johannes Gutenberg-Universität,
D55099 Mainz, Germany

4. Mesoscopic Simulations of Polymer Mixtures

153

Olaf Evers

BASF Aktiengesellschaft, Department of Polymer Physics,
D-67056 Ludwigshafen am Rhein, Germany

5. Prediction of Mechanical Properties of Semicrystalline Polymers	219
<i>A. Raphael and I. Alig</i>	
Deutsches Kunststoff-Institut, Schlossgartenstr. 6, 64289 Darmstadt, Germany	
<i>M. Kröhn</i>	
Siemens VDO Automotive AG, VDO-Str. 1, 64832 Babenhausen, Germany	
6. Crosslinking Simulations in Polymer Design	243
<i>Robert T. Johnston</i>	
Ethylene Elastomers R&D, DuPont Dow Elastomers LLC, Freeport, Texas, USA	
Index	277
