<i>Preface</i>	v
<i>Introduction</i>	vii

SECTION I GRAIN—PROPERTIES, DRYING AND DRYERS

Chapter 1	Properties of Grains	3
	Structure, Chemical composition, Effects of temperature, Physical properties, Thermal properties and Aerodynamic properties	
Chapter 2	Psychrometry	14
	Definition, Wet bulb temperature, Wet bulb theory, Introduction to the Psychrometric chart, Problems of Psychrometry and exercises.	
Chapter 3	Theory of Grain Drying	26
	Thin layer drying, Moisture measurement, Equilibrium moisture content, Definitions, Constant-rate period, Falling-rate period, Mathematical modelling of thin layer grain drying, Determination of drying constant, Remarks on thin layer drying equations, Effect of different factors on drying operation, Deep bed drying, Remarks on deep bed drying, Problems on drying and exercises.	
Chapter 4	Methods of Grain Drying	62
	Classification of drying, Conduction drying, Convection drying, Radiation drying, Dielectric drying, Chemical drying and sack drying.	

Chapter 5	Grain Dryers	69
	Unheated air dryers—storage unit, Aeration system, Air distribution system, Heated air dryers—flat bed type batch dryer, Recirculatory batch dryers, Louisiana State University dryer, Baffle dryer and Rotary dryer.	

Chapter 6	Selection, Design, Specifications and Testing of Grain Dryers	87
	Selection of dryers, Preliminary dryer selection, Comparison of dryers, Final selection of dryers, Design of grain dryers, Specifications of dryers, Testing of grain dryers—Simple method, Rigorous method, Problems on dryer design and exercises and Bibliography for section I.	

**SECTION II
GRAIN STORAGE**

Chapter 7	Food Grain Storage	115
	Grain storage principles, Parameters affecting grains during storage, Changes occurring in food grains during storage—chemical, Physiological and biological, Moisture migration; Grain storage pests and their control, Detection of insect infestation, Grain storage pests, Important insect species, Control of stored food grain pests, Fumigation, Principles of fumigation, Application of fumigants; Rodents control, Rodenticides for rats and mice; food grains and storage structures—traditional and improved storage structures; Bag and bulk storage; Godowns, Silos; Grain pressure theories, Janssen, Airy and Rankine equations; Economics of storage and Bibliography for section II	

**SECTION III
PARBOILING**

Chapter 8	Parboiling of Grain	151
	Hydration, Hydration equations, Steaming, Drying, Milling, Qualities, Traditional and	

improved parboiling methods and Design problems.

Chapter 9 Parboiling of Wheat 170

Principles of parboiling of wheat, Methods of parboiling and production of bulgur—Batch method, Pretreatment process, Continuous process and Chemical lye peeling process and Bibliography for section III

**SECTION IV
MILLING**

Chapter 10 General Grain Milling Operations 183

Cleaning/Separation—Classification of separation methods, Effectiveness of separation; Husking/Scouring/Hulling of grain—Methods of husking; Husking/Hulling machines, Factors affecting effectiveness of hulling; Grinding Effectiveness of grinding, Machines used in cereal grinding; Grinding of grains in roller mills and in hammer mills.

Chapter 11 Hydrothermal Treatment/Conditioning of Cereal Grains 201

Changes owing to hydrothermal treatment—Physico-thermal properties, Biochemical properties, Physico-chemical Properties; Effects of different factors on the changes of various properties.

Chapter 12 Rice Milling 205

Traditional rice milling machines, Modern rice milling machines; cleaning—General principles of cleaning, Open double-sieve pre-cleaner, Single scalper drum cleaner (Japan), Paddy cleaner with stoner (Japan), Paddy cleaner (West Germany); Husking—Impact type paddy Husker, Rubber roll husker; Separation—Paddy separator (Japan), Paddy separator (Europe); Whitening—Vertical whitening machine (Europe), Horizontal rice whitening machine (Japan), and friction type rice whitening machine (Japan).

- Chapter 13 Milling of Corn, Wheat Barley, Rye, Oats, Sorghum and Pulses** 241
- Corn milling—composition and structure, Corn dry milling, Corn wet milling: Wheat milling—Flour milling; Milling of pulses—Varieties, composition and structure, Traditional dry milling methods, Commercial milling of pulses, modern methods of pulses—milling and Bibliography for section IV

**SECTION V
BY-PRODUCTS/BIOMASS UTILIZATION**

- Chapter 14 Rice Bran** 267
- General characteristics and chemical composition, Problems of processing, Factors affecting formation FFA in bran during storage.
- Chapter 15 Utilization of Rice Bran** 274
- General, Dry heat treatment, Wet heat treatment; Rice bran stabilizers; Extraction of rice bran oil, solvent extraction method, Refining of crude rice bran oil into edible grade oil, Uses of bran, bran oil and various other constituents and Bibliography.
- Chapter 16 Biomass-Conversion Technologies** 284
- Biomass, Biomass conversion technologies, Chemical and biochemical processing—production of silica, silicon and ceramics from rice husk, production of paper, biodegradable plastics films and alcohol from biomass; Thermal and Thermochemical processing—pyrolysis: principles, wood chemicals and charcoal; gasification: principles, updraft, downdraft, crossdraft and fluidized bed gasifiers; combustion: principles, combustion air, fluegas and enthalpy calculations, statistical tables, furnace design and calculations and Bibliography.
- Chapter 17 Postharvest Management of Fruits and Vegetables** 308
- Respiration process—heat of respiration,

classification of fruits and vegetables; Ripening process—ripening conditions for apples, bananas, mangoes, tomatoes; Cooling of commodities—forced air cooling, tunnel cooling, serpentine cooling, cold wall cooler, cooling rate in forced air cooling, hydrocooling, vacuum cooling, cooling time calculation; Packaging of fruits and vegetables—LDPE, polypropylene (PP), Poly styrene (PS), PVC, Ethyl vinyl alcohol; Controlled atmosphere storage—recommended storage condition for different fruits and vegetables; Modified atmosphere packaging (MAP)—gas permeability rates, respiratory quotient, package design/variables, transient atm conditions in MAP and Bibliography
