

**WEEDS AND WEED
MANAGEMENT ON
ARABLE LAND
AN ECOLOGICAL
APPROACH**

Sigurd Håkansson

CABI Publishing

Contents

Preface	x
Background and Focus of the Book	x
Guide to Central Topics Covered in Chapters 1–13	xi
Acknowledgements	xiv
1. Introduction	1
Comments on the book	1
The concept of weeds	1
Some definitions and descriptions	3
2. Classification of Plants Based on Traits of Ecological Significance	4
Life Form, Growth Form, Lifespan	4
Raunkiær's Life-form System	5
Classification Using the Term 'Life Form' in a Wide Sense	6
Overview	6
Seed banks and germination of weed seeds in the soil in different seasons	6
Classification of weeds	7
Annuals	8
Biennials, monocarpic perennials (pluriennials)	9
Stationary perennials	9
Creeping perennials	10
Perennials with other or modified regenerative structures	12
Classification Problems with Species Distributed over Wide Geographical Areas	12
3. Annual and Perennial Crops	14
4. Weed Communities Looked Upon as Early Stages in Secondary Vegetation Succession	16
5. Weeds with Diverse Life Forms in Various Types of Crops	20
Overview in a North-European Perspective	20
Comments on crops and cropping systems in the Nordic countries	20
Relationships of weeds to crops largely depend on times and types of tillage	21
Changes in tillage and other measures selectively affecting weeds	27

Scandinavia and Finland – Field Surveys and General Observations	28
Summer annuals	32
Winter annuals (facultative)	33
Biennials (monocarpic perennials)	34
Stationary perennials	35
Creeping perennials with stolons or prostrate above-ground stems	35
Creeping perennials with rhizomes sensitive to soil cultivation	35
Creeping perennials with rhizomes tolerant to soil cultivation	35
Creeping perennials with plagiotropic thickened roots	36
Changes in weed flora after the 1940s	36
Northern and Southern Europe	39
Global Perspectives	44
Life forms of weeds	44
C ₄ plants among arable weeds	49
Plants of different families as arable weeds	52
Parasitic weeds	54
Which Crops in a Crop Sequence Favour the Population of a Specified Weed?	55
6. Germination, Emergence and Establishment of Crop and Weed Plants	56
Introduction	56
Seed Dormancy and Germination and Soil Seed Banks	56
From Seed Swelling to Plant Establishment	60
Experiments Exemplifying Influences on Plant Emergence and Establishment	61
Experimental conditions	61
Dry matter losses before plant emergence	61
Plant establishment	62
Examples representing cultivated plants	62
An example representing annual weeds	64
Plant emergence and early mortality among emerged plants	65
Overview of Factors Influencing Plant Emergence and Establishment	67
Seed size and depth location in soil, light intensity and temperature	67
Water conditions in the soil	69
Soil Moisture Content – Seed Germination – Plant Growth	71
Effects of the relative time of emergence of neighbouring plants in a cereal stand	71
Sowing depth and growth of crop and weed plants	72
Sowing depth – principles regarding crop and soil in the field	73
Seedbed Preparation and Sowing Considering Relative Times of Crop and Weed Emergence	75
Ordinary spring sowing – examples regarding different soils	75
‘Delayed’ spring sowing	76
Autumn sowing	76
Effects of rolling	77
Late Emergence of Weeds – Consequences in Differently Competitive Crops	78
Fertilizer Placement	78
7. Competition in Plant Stands of Short Duration	81
The Concept of Competition	81
General	81
Impacts of allelochemicals – allelopathy	83
Competition and Phenotypic Plasticity	83
Intraspecific and Interspecific Competition	85

Relative Competitiveness	85
Competition as Influenced by Plant Spacing and Relative Time of Emergence	86
Effects of Plant Density	87
General characteristics of production–density relationships	87
Production in crop stands	90
Yield in different crops	90
Plasticity of crop plants and quality of harvested products – examples	92
Crop–weed interactions	93
Effects of the Spatial Distribution of Plants	100
Theory	100
Row spacing and plant distribution in the row	101
Effects of the Relative Time of Emergence	106
General	106
Experiments with cereals and weeds	107
Competition Modifies the Response of Plants to Various Factors – Examples	111
Response to nitrogen	111
Growth of plants from seeds of different sizes placed at various depths in the soil	113
Regrowth after breakage and burial of regenerative structures of perennial weeds with an example of nitrogen influences	114
Response to temperature	115
Response to infections – example, discussion	117
8. Weed Flora and Plant Adaptation to Environment and Competitive Conditions	119
Extremely Complex Causalities	119
Changes in the Weed Flora as Related to Increased Fertilizer Use – Some Scandinavian Examples	119
Competitive Conditions in Different Crops	121
Competitive Ability of Weeds	123
The importance of plant traits	123
Reasons for variation often hard to identify in the field	124
Phenotypic Adaptation to Environments Exemplified by Weeds in Lawns	125
9. Measurements of Competition and Competitiveness in Plant Stands of Short Duration	128
Introduction: Stands of Short and Long Duration	128
Unit Production Ratio (UPR)	129
UPR in Measuring the Relative Competitiveness of Plants	129
Use of UPR and Percentage (or Relative) UPR – Examples	132
Selective Effects of Competition within Heterogeneous Components in Mixed Stands	136
Determination of Production–Density Relationships in Mixed Stands	137
Reference Models	138
Reference Models in Evaluating Relationships and Indices Aimed at Characterizing Relative Competitiveness – Examples	139
Plant Growth as Influenced by Density and Relative Time of Emergence	144
Growth Reduction Rate (RR)	149
Changes in UPR and Percentage UPR Over Time – Comparing Growth Rates and Competitive Conditions in Mixed Stands	151
The Relative Crowding Coefficient (k) and the Relative Yield Total (RYT) Observed Over Time	153

'Critical Periods' of Weed Control in a Crop Stand	154
Early Predictions of Yield Loss Due to Weeds	155
10. Soil Tillage Effects on Weeds	158
Introduction	158
Uncultivated land brought into cultivation	158
Selective effects of tillage	159
No more tillage than necessary	159
Tillage Effects on Weed Seeds in the Soil Seed Bank	160
Tillage Effects on Seedlings	162
Seedlings of annuals	162
Seedlings of perennials	163
Tillage Effects on Perennial Plants with Fully Developed Vegetative Structures	164
General statements	164
Plants with low tolerance to tillage	165
Plants with higher tolerance to tillage	165
Factors affecting the response of growing plants to tillage – an overview	166
Perennials with rhizomes or plagiotropic roots	167
Undisturbed growth and response to a single soil operation	168
Response to repeated tillage	178
A Cropping System Approach to Effects of Tillage	183
Periods when the field is free of growing crops	183
Seedbed preparation – effect on weed seeds in the soil	183
Tillage considering the growth rhythm of <i>Elymus repens</i>	185
Tillage between harvest and winter	186
Tillage between harvest and autumn sowing	189
Harrowing and hoeing in growing crops	190
Reduced Tillage	193
11. Chemical Weed Control as an Element in the Cropping System	197
Introductory Comments	197
Intended Effects of Herbicides	198
The importance of a uniform herbicide distribution	198
Joint effects of herbicides and competition in a crop stand	199
A reduced herbicide dose – a proportionally less reduced effect	200
Herbicide application techniques	203
Compounds mixed with herbicides in commercial formulations or added to the spray liquid	203
Systemic and contact herbicides	204
Pre-emergence soil application of herbicides	205
The persistence of herbicides	206
Measurements of herbicide effects	206
Unintended Effects of Herbicides	207
General	207
Toxicity	208
Persistence – movements	208
Harm of pesticide pollution	209
Problems in handling herbicides	210
Resistance in response to recurrent use of similar herbicides	210
Herbicide and Tillage Problems in Efforts to Develop Sustainable Cropping Systems	211

12. Special Management Measures	214
Various Methods of Mechanical or Physical Weed Control	214
Cover Crops and Mulches	215
Harvesting – Timing and Methods	217
Combine harvesting	217
Harvesting of root crops	218
Breeding for Increased Competitive Ability of Crops	218
Biological Control	219
13. Important Points for Understanding the Occurrence and Rational Management of Weeds	222
General Views	222
Illustrations: Case Studies in Sweden	222
<i>Allium vineale</i> – a bulb-forming perennial	223
Introductory remarks	223
The study and its results	223
Morphology and reproduction (Fig. 66)	224
Annual rhythm of growth and development (Fig. 67a)	224
Population structure	225
Sensitivity to tillage	225
Occurrence in autumn-sown cereals	225
Growth in years with and without spring tillage (Table 44)	227
Occurrence on heavier and lighter soil and in winter rye and winter wheat	227
Interpretation of results	231
Effects of herbicides	231
Occurrence and management of <i>A. vineale</i> discussed on the basis of the investigation	232
<i>Sinapis arvensis</i> – a summer annual	233
<i>Avena fatua</i> – a summer annual in the Nordic countries	234
<i>Elymus repens</i> and <i>Agrostis gigantea</i> – perennial rhizomatous grasses	236
<i>Cirsium arvense</i> – a perennial dicot with plagiotropic roots	242
References	248
Species Index	269
Subject Index	272
