

MAPLE ANIMATION

JOHN F. PUTZ

CHAPMAN & HALL/CRC

Contents

1	Getting Started	1
1.1	The basic command line	1
1.2	A few words about Maple arithmetic	2
1.3	Comments	3
1.4	Assigning names to results	4
1.5	Built-in functions	5
1.6	Defining functions	6
1.7	Getting help and taking the tour	7
1.8	Saving, quitting, and returning to a saved worksheet	9
2	The Plot	11
2.1	The basics	11
2.2	Parametric forms	13
2.3	Plotting points and using the <code>plots</code> package	15
2.4	Storing and displaying plots	21
2.5	The plot thickens	22
2.6	Smoothing plots	23
2.7	Color	24
2.8	Scaling	27
2.9	Plotting with style	28
2.10	Adjusting your point of view	29
2.11	A limited view	30
2.12	Tailoring the axes	32
2.13	Toward leaner code	35
2.14	Context-sensitive menus and context bars	36
2.15	Further details	38
3	Non-Cartesian Coordinates and Quadric Surfaces	39
3.1	Polar coordinates	39
3.2	Cylindrical coordinates	41
3.3	Spherical coordinates and others	43
3.4	Quadrics quickly	46
3.5	Paraboloids	50
3.6	Elliptic cones	52
3.7	Ellipsoids	53
3.8	Hyperboloids	55
3.9	Quadric surfaces with axes other than the z -axis	57

4	Simple Animations	61
4.1	Animating a function of a single variable	61
4.2	Outline of an animation worksheet	65
4.3	Demonstrations: Secant lines and tangent lines	66
4.3.1	Secant lines at a point approaching a tangent line	67
4.3.2	Secant lines at a corner point	68
4.4	Using animated demonstrations in the classroom	69
4.5	Watching a curve being drawn	69
4.6	Demonstration: The squeeze theorem	70
4.7	Animating a function of two variables	71
4.8	Demonstrations: Hyperboloids	73
4.8.1	Hyperboloid of one sheet	73
4.8.2	Hyperboloid of two sheets	75
4.9	Demonstrations: Paraboloids	76
4.9.1	Elliptic paraboloid	76
4.9.2	Hyperbolic paraboloid	78
4.10	Demonstration: Level curves and contour plots	79
5	Building and Displaying a Frame Sequence	83
5.1	Sequences	83
5.2	The <code>student</code> and <code>Student[Calculus1]</code> packages	84
5.3	Displaying a sequence of frames	85
5.4	Building sequences with <code>seq</code>	87
5.5	Demonstrations: Rectangular approximation of the definite integral	88
5.5.1	Using <code>seq</code> and <code>rightbox</code>	88
5.5.2	The <code>RiemannSum</code> procedure of Maple 8	89
5.6	Demonstration: Level surfaces	91
5.7	Moving points	93
5.8	Demonstrations: Projectiles	94
5.8.1	Path of a single projectile	94
5.8.2	Comparison of a dropped object and a propelled object	95
5.9	Demonstration: Cycloid	96
6	Loops and Derivatives	99
6.1	The <code>for</code> loop	99
6.2	The <code>while</code> loop	103
6.3	Derivatives	104
6.4	The <code>line</code> procedure	106
6.5	Demonstrations: Newton's method	107
6.5.1	Using a <code>for</code> loop	107
6.5.2	The <code>NewtonsMethod</code> procedure of Maple 8	111
6.5.3	Maple 8 demonstrations: Experimenting with Newton's method	113
6.6	Demonstrations: Solids of revolution	115

6.6.1	Revolving a region about the vertical axis	115
6.6.2	Revolving a region about the horizontal axis	118
6.7	Demonstrations: Surfaces of revolution	120
6.7.1	Revolving a curve about the vertical axis	120
6.7.2	Revolving a curve about the horizontal axis	122
7	Adding Text to Animations	123
7.1	Titles	123
7.2	The <code>textplot</code> and <code>textplot3d</code> procedures	125
7.3	Making text move	128
7.4	Demonstrations: Secant lines and tangent lines with labels .	130
7.4.1	Secant lines at a point approaching a tangent line . .	130
7.4.2	Secant lines at a corner point	132
7.4.3	The <code>NewtonQuotient</code> procedure of Maple 8	134
7.5	Including computed values in text	136
7.6	Demonstration: Rectangular approximation of the definite in- tegral with annotation	138
7.7	Constructing Taylor polynomials	140
7.7.1	Taylor series and the <code>convert</code> procedure	140
7.7.2	The <code>TaylorApproximation</code> procedure of Maple 8 . . .	141
7.8	Demonstrations: Taylor polynomials	142
7.8.1	Taylor polynomials of varying degree	142
7.8.2	Maple 8 alternative using <code>TaylorApproximation</code> . . .	144
7.9	Demonstrations: Experimenting with Taylor polynomials . .	145
7.9.1	Taylor polynomials with varying center	145
7.9.2	Maple 8 alternative using <code>TaylorApproximation</code> . . .	147
8	Plotting Vectors	149
8.1	The two <code>arrow</code> procedures	149
8.2	The <code>arrow</code> procedure of the <code>plots</code> package	150
8.3	Dot product and cross product	156
8.4	The <code>arrow</code> options	157
8.5	Demonstration: The cross product vector	161
8.6	Demonstration: Velocity and acceleration vectors in two di- mensions	165
8.7	Demonstration: Lines in space	168
9	Plotting Space Curves	171
9.1	The <code>spacecurve</code> procedure	171
9.2	Demonstration: Curves in space	173
9.3	Demonstration: Directional derivative and gradient vector .	175
9.4	The <code>tubeplot</code> procedure	179
9.5	Demonstration: Velocity and acceleration vectors in three di- mensions	184

10 Transformations and Morphing	187
10.1 The <code>plottools</code> package	187
10.2 The <code>rotate</code> procedure	190
10.3 The <code>transform</code> procedure	193
10.4 Matrix transformations	195
10.5 Morphing	198
10.6 Linear transformations	200
10.6.1 Demonstrations: Linear transformations of $\mathbb{R}^2$	201
10.6.2 Demonstrations: Linear transformations of $\mathbb{R}^3$	203
Bibliography	207
Index	209
