FLUID MECHANICS AND THERMODYNAMICS OF TURBOMACHINERY

FIFTH EDITION

S. L. DIXON

Contents

PREFACE TO THE FIFTH EDITION xi

PREFACE TO THE FOURTH EDITION xiii

PREFACE TO THE THIRD EDITION xv

ACKNOWLEDGEMENTS xvii

LIST OF SYMBOLS xix

1. Introduction: Dimensional Analysis: Similitude 1

Definition of a turbomachine 1

Units and dimensions 3

Dimensional analysis and performance laws 5

Incompressible fluid analysis 6

Performance characteristics 7

Variable geometry turbomachines 8

Specific speed 10

Cavitation 12

Compressible gas flow relations 15

Compressible fluid analysis 16

The inherent unsteadiness of the flow within turbomachines 20

References 21

Problems 22

2. Basic Thermodynamics, Fluid Mechanics: Definitions of Efficiency 24

Introduction 24

The equation of continuity 24

The first law of thermodynamics—internal energy 25

The momentum equation—Newton's second law of motion 26

The second law of thermodynamics—entropy 30

Definitions of efficiency 31

Small stage or polytropic efficiency 35

Nozzle efficiency 42

Diffusers 44

References 54

Problems 55

3. Two-dimensional Cascades 56

<i>Introduction</i>	56
<i>Cascade nomenclature</i>	57
<i>Analysis of cascade forces</i>	58
<i>Energy losses</i>	60
<i>Lift and drag</i>	60
<i>Circulation and lift</i>	62
<i>Efficiency of a compressor cascade</i>	63
<i>Performance of two-dimensional cascades</i>	64
<i>The cascade wind tunnel</i>	64
<i>Cascade test results</i>	66
<i>Compressor cascade performance</i>	69
<i>Turbine cascade performance</i>	72
<i>Compressor cascade correlations</i>	72
<i>Fan blade design (McKenzie)</i>	80
<i>Turbine cascade correlation (Ainley and Mathieson)</i>	83
<i>Comparison of the profile loss in a cascade and in a turbine stage</i>	88
<i>Optimum space-chord ratio of turbine blades (Zweifel)</i>	89
<i>References</i>	90
<i>Problems</i>	92

4. Axial-flow Turbines: Two-dimensional Theory 94

<i>Introduction</i>	94
<i>Velocity diagrams of the axial turbine stage</i>	94
<i>Thermodynamics of the axial turbine stage</i>	95
<i>Stage losses and efficiency</i>	97
<i>Soderberg's correlation</i>	98
<i>Types of axial turbine design</i>	100
<i>Stage reaction</i>	102
<i>Diffusion within blade rows</i>	104
<i>Choice of reaction and effect on efficiency</i>	108
<i>Design point efficiency of a turbine stage</i>	109
<i>Maximum total-to-static efficiency of a reversible turbine stage</i>	113
<i>Stresses in turbine rotor blades</i>	115
<i>Turbine flow characteristics</i>	121
<i>Flow characteristics of a multistage turbine</i>	123
<i>The Wells turbine</i>	125
<i>Pitch-controlled blades</i>	132
<i>References</i>	139
<i>Problems</i>	140

5. Axial-flow Compressors and Fans 145

<i>Introduction</i>	145
<i>Two-dimensional analysis of the compressor stage</i>	146

<i>Velocity diagrams of the compressor stage</i>	148
<i>Thermodynamics of the compressor stage</i>	149
<i>Stage loss relationships and efficiency</i>	150
<i>Reaction ratio</i>	151
<i>Choice of reaction</i>	151
<i>Stage loading</i>	152
<i>Simplified off-design performance</i>	153
<i>Stage pressure rise</i>	155
<i>Pressure ratio of a multistage compressor</i>	156
<i>Estimation of compressor stage efficiency</i>	157
<i>Stall and surge phenomena in compressors</i>	162
<i>Control of flow instabilities</i>	167
<i>Axial-flow ducted fans</i>	168
<i>Blade element theory</i>	169
<i>Blade element efficiency</i>	171
<i>Lift coefficient of a fan aerofoil</i>	173
<i>References</i>	173
<i>Problems</i>	174

6. Three-dimensional Flows in Axial Turbomachines 177

<i>Introduction</i>	177
<i>Theory of radial equilibrium</i>	177
<i>The indirect problem</i>	179
<i>The direct problem</i>	187
<i>Compressible flow through a fixed blade row</i>	188
<i>Constant specific mass flow</i>	189
<i>Off-design performance of a stage</i>	191
<i>Free-vortex turbine stage</i>	192
<i>Actuator disc approach</i>	194
<i>Blade row interaction effects</i>	198
<i>Computer-aided methods of solving the through-flow problem</i>	199
<i>Application of Computational Fluid Dynamics (CFD) to the design of axial turbomachines</i>	201
<i>Secondary flows</i>	202
<i>References</i>	205
<i>Problems</i>	205

7. Centrifugal Pumps, Fans and Compressors 208

<i>Introduction</i>	208
<i>Some definitions</i>	209
<i>Theoretical analysis of a centrifugal compressor</i>	211
<i>Inlet casing</i>	212
<i>Impeller</i>	212
<i>Conservation of rothalpy</i>	213
<i>Diffuser</i>	214

viii Contents

<i>Inlet velocity limitations</i>	214
<i>Optimum design of a pump inlet</i>	215
<i>Optimum design of a centrifugal compressor inlet</i>	217
<i>Slip factor</i>	222
<i>Head increase of a centrifugal pump</i>	227
<i>Performance of centrifugal compressors</i>	229
<i>The diffuser system</i>	237
<i>Choking in a compressor stage</i>	240
<i>References</i>	242
<i>Problems</i>	243

8. Radial Flow Gas Turbines 246

<i>Introduction</i>	246
<i>Types of inward-flow radial turbine</i>	247
<i>Thermodynamics of the 90 deg IFR turbine</i>	249
<i>Basic design of the rotor</i>	251
<i>Nominal design point efficiency</i>	252
<i>Mach number relations</i>	256
<i>Loss coefficients in 90 deg IFR turbines</i>	257
<i>Optimum efficiency considerations</i>	258
<i>Criterion for minimum number of blades</i>	263
<i>Design considerations for rotor exit</i>	266
<i>Incidence losses</i>	270
<i>Significance and application of specific speed</i>	273
<i>Optimum design selection of 90 deg IFR turbines</i>	276
<i>Clearance and windage losses</i>	278
<i>Pressure ratio limits of the 90 deg IFR turbine</i>	279
<i>Cooled 90 deg IFR turbines</i>	280
<i>A radial turbine for wave energy conversion</i>	282
<i>References</i>	285
<i>Problems</i>	287

9. Hydraulic Turbines 290

<i>Introduction</i>	290
<i>Hydraulic turbines</i>	291
<i>The Pelton turbine</i>	294
<i>Reaction turbines</i>	303
<i>The Francis turbine</i>	304
<i>The Kaplan turbine</i>	310
<i>Effect of size on turbomachine efficiency</i>	313
<i>Cavitation</i>	315
<i>Application of CFD to the design of hydraulic turbines</i>	319
<i>References</i>	320
<i>Problems</i>	320

10. Wind Turbines 323*Introduction 323**Types of wind turbine 325**Growth of wind power capacity and cost 329**Outline of the theory 330**Actuator disc approach 330**Estimating the power output 337**Power output range 337**Blade element theory 338**The blade element momentum method 346**Rotor configurations 353**The power output at optimum conditions 360**HAWT blade selection criteria 361**Developments in blade manufacture 363**Control methods (starting, modulating and stopping) 364**Blade tip shapes 369**Performance testing 370**Performance prediction codes 370**Comparison of theory with experimental data 371**Peak and post-peak power predictions 371**Environmental considerations 373**References 374***Bibliography 377****Appendix 1. Conversion of British and US Units to SI Units 378****Appendix 2. Answers to Problems 379****Index 383**
