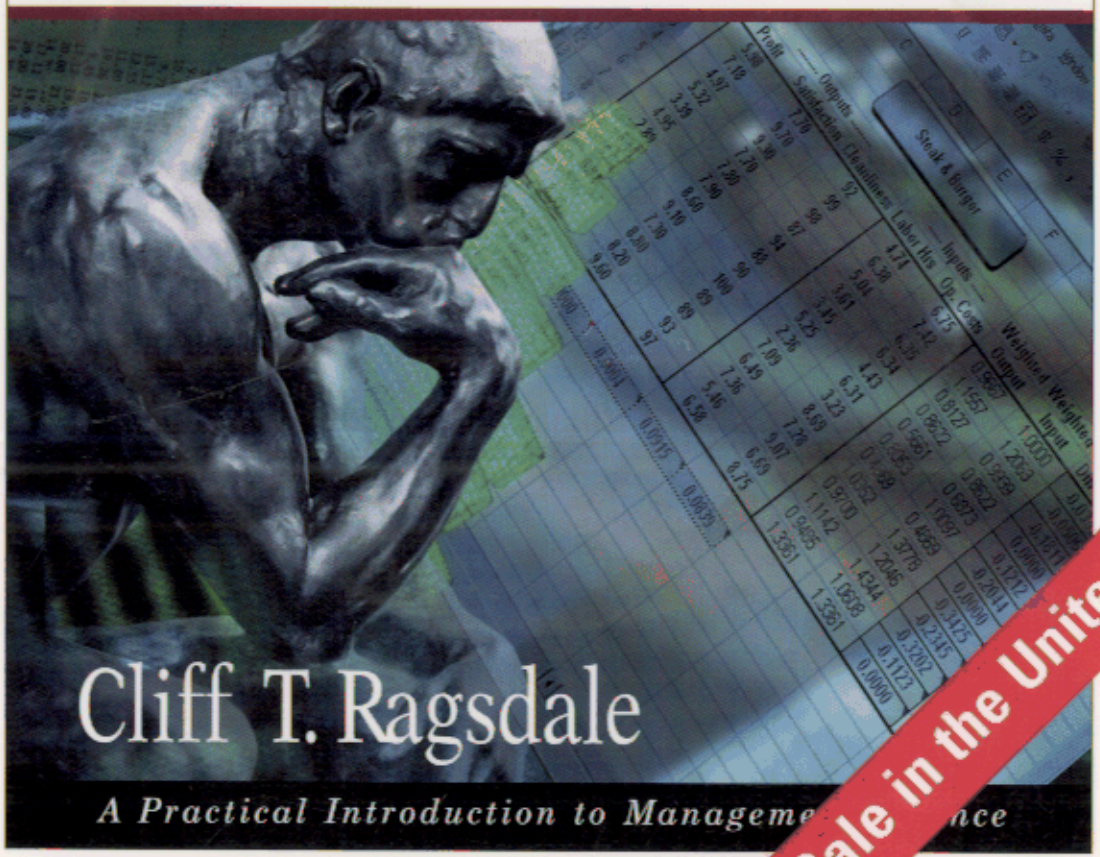
International Student Edition

Spreadsheet Modeling & Decision Analysis

FOURTH EDITION



Cliff T. Ragsdale

A Practical Introduction to Manageme... ...nce

Not for Sale in the United States

Contents

1. Introduction to Modeling and Decision Analysis 1

Introduction 1

The Modeling Approach to Decision Making 2

Characteristics and Benefits of Modeling 4

Mathematical Models 5

Categories of Mathematical Models 7

The Problem-Solving Process 8

Anchoring and Framing Effects 11

Good Decisions vs. Good Outcomes 12

Summary 13

References 13

The World of Management Science 14

Questions and Problems 16

2. Introduction to Optimization and Linear Programming 17

Introduction 17

Applications of Mathematical Optimization 18

Characteristics of Optimization Problems 18

Expressing Optimization Problems Mathematically 19
Decisions 19 Constraints 20 Objective 20

Mathematical Programming Techniques 21

An Example LP Problem 21

Formulating LP Models 22
Steps in Formulating an LP Model 22

Summary of the LP Model for the Example Problem 23

The General Form of an LP Model 24

Solving LP Problems: An Intuitive Approach 25

Solving LP Problems: A Graphical Approach 26
Plotting the First Constraint 26 Plotting the Second Constraint 27 Plotting the Third Constraint 29 The Feasible Region 30 Plotting the Objective Function 30 Finding the Optimal Solution Using Level Curves 32 Finding the Optimal Solution by Enumerating the Corner Points 33 Summary of Graphical Solution to LP Problems 33

Special Conditions in LP Models 34
Alternate Optimal Solutions 35 Redundant Constraints 35 Unbounded Solutions 37 Infeasibility 39

Summary 40

References 40

Questions and Problems 41

3. Modeling and Solving LP Problems in a Spreadsheet 45

Introduction 45

Spreadsheet Solvers 46

Solving LP Problems in a Spreadsheet 46

The Steps in Implementing an LP Model in a Spreadsheet 47

A Spreadsheet Model for the Blue Ridge Hot Tubs Problem 48
Organizing the Data 48 Representing the Decision Variables 49 Representing the Objective Function 49 Representing the Constraints 50 Representing the Bounds on the Decision Variables 51

How Solver Views the Model 52

Using Solver 54
Defining the Set (or Target) Cell 56 Defining the Variable Cells 57 Defining the Constraint Cells 58 Defining the Nonnegativity Conditions 59 Reviewing the Model 60 Options 60 Solving the Model 60

Goals and Guidelines for Spreadsheet Design 62

Make vs. Buy Decisions 64
Defining the Decision Variables 65 Defining the Objective Function 65 Defining the Constraints 66 Implementing the Model 66 Solving the Model 68 Analyzing the Solution 68

An Investment Problem 69
Defining the Decision Variables 70 Defining the Objective Function 71 Defining the Constraints 71 Implementing the Model 71 Solving the Model 73 Analyzing the Solution 74

A Transportation Problem 74
Defining the Decision Variables 75 Defining the Objective Function 76 Defining the Constraints 76 Implementing the Model 77 Heuristic Solution for the Model 79 Solving the Model 80 Analyzing the Solution 80

A Blending Problem 81
Defining the Decision Variables 82 Defining the Objective Function 82 Defining the Constraints 82 Some Observations About Constraints, Reporting, and Scaling 83 Rescaling the Model 84 Implementing the Model 85 Solving the Model 87 Analyzing the Solution 87

A Production and Inventory Planning Problem 88
Defining the Decision Variables 89 Defining the Objective Function 89 Defining the Constraints 90 Implementing the Model 91 Solving the Model 93 Analyzing the Solution 93

A Multiperiod Cash Flow Problem 94
Defining the Decision Variables 95 Defining the Objective Function 96 Defining the Constraints 96 Implementing the Model 98 Solving the Model 101 Analyzing the Solution 102 Modifying the Taco-Viva Problem to Account for Risk (Optional) 102 Implementing the Risk Constraints 104 Solving the Model 106 Analyzing the Solution 107

Data Envelopment Analysis 107
Defining the Decision Variables 108 Defining the Objective 108 Defining the Constraints 108 Implementing the Model 109 Solving the Model 111 Analyzing the Solution 116

Summary 118

References 118

The World of Management Science 118

Questions and Problems 119

Cases 137

4. Sensitivity Analysis and the Simplex Method 143

Introduction 143

The Purpose of Sensitivity Analysis 143

Approaches to Sensitivity Analysis 144

An Example Problem 145

The Answer Report 146

The Sensitivity Report 147
Changes in the Objective Function Coefficients 147 A Note About Constancy 149 Alternate Optimal Solutions 150 Changes in the RHS Values 150 Shadow Prices for Nonbinding Constraints 151 A Note About Shadow Prices 151 Shadow Prices and the Value of Additional Resources 152 Other Uses of Shadow Prices 154 The Meaning of the Reduced Costs 154 Analyzing Changes in Constraint Coefficients 157 Simultaneous Changes in Objective Function Coefficients 158 A Warning About Degeneracy 159

The Limits Report 159

The Sensitivity Assistant Add-In (Optional) 160
Creating Spider Tables and Plots 161 Creating a Solver Table 164 Comments 167

The Simplex Method (Optional) 167
Creating Equality Constraints Using Slack Variables 167 Basic Feasible Solutions 168 Finding the Best Solution 170

Summary 171

References 171

The World of Management Science 172

Questions and Problems 173

Cases 181

5. Network Modeling 185

Introduction 185

The Transshipment Problem 185
Characteristics of Network Flow Problems 186 The Decision Variables for Network Flow Problems 187 The Objective Function for Network Flow Problems 188 The Constraints for Network Flow Problems 188 Implementing the Model in a Spreadsheet 190 Analyzing the Solution 191

The Shortest Path Problem 192
An LP Model for the Example Problem 194 The Spreadsheet Model and Solution 195 Network Flow Models and Integer Solutions 197

The Equipment Replacement Problem 197
The Spreadsheet Model and Solution 199

Transportation/Assignment Problems 201

Generalized Network Flow Problems 203
Formulating an LP Model for the Recycling Problem 204 Implementing the Model 205 Analyzing the Solution 207 Generalized Network Flow Problems and Feasibility 209

Maximal Flow Problems 210
An Example of a Maximal Flow Problem 211 The Spreadsheet Model and Solution 212

Special Modeling Considerations 215

Minimal Spanning Tree Problems 218
An Algorithm for the Minimal Spanning Tree Problem 219 Solving the Example Problem 219

Summary 220

References 221

The World of Management Science 221

Questions and Problems 222

Cases 236

6. Integer Linear Programming 244

Introduction 244

Integrality Conditions 244

Relaxation 245

Solving the Relaxed Problem 246

Bounds 248

Rounding 249

Stopping Rules 251

Solving ILP Problems Using Solver 253

Other ILP Problems 255

An Employee Scheduling Problem 257
Defining the Decision Variables 258 Defining the Objective Function 258 Defining the Constraints 258 A Note About the Constraints 259 Implementing the Model 260 Solving the Model 260 Analyzing the Solution 261

Binary Variables 262

A Capital Budgeting Problem 262
Defining the Decision Variables 263 Defining the Objective Function 263 Defining the Constraints 264 Setting Up the Binary Variables 264 Implementing the Model 264 Solving the Model 265 Comparing the Optimal Solution to a Heuristic Solution 266

Binary Variables and Logical Conditions 268

The Fixed-Charge Problem 268
Defining the Decision Variables 269 Defining the Objective Function 270 Defining the Constraints 270 Determining Values for "Big M" 271 Implementing the Model 271 Solving the Model 273 Analyzing the Solution 274

Minimum Order/Purchase Size 276

Quantity Discounts 276
Formulating the Model 277 The Missing Constraints 277

A Contract Award Problem 278
Formulating the Model: The Objective Function and Transportation Constraints 279 Implementing the Transportation Constraints 279 Formulating the Model: The Side Constraints 280 Implementing the Side Constraints 281 Solving the Model 283 Analyzing the Solution 283

The Branch-and-Bound Algorithm (Optional) 284
Branching 285 Bounding 287 Branching Again 288 Bounding Again 288 Summary of B&B Example 289

Summary 290

References 292

The World of Management Science 292

Questions and Problems 293

Cases 306

7. Goal Programming and Multiple Objective Optimization 313

Introduction 313

Goal Programming 314

A Goal Programming Example 314
Defining the Decision Variables 315 Defining the Goals 315 Defining the Goal Constraints 315 Defining the Hard Constraints 316 GP Objective Functions 317 Defining the Objective 318 Implementing the Model 319 Solving the Model 321 Analyzing the Solution 321 Revising the Model 321 Trade-offs: The Nature of GP 322

Comments About Goal Programming 324

Multiple Objective Optimization 325

An MOLP Example 326
Defining the Decision Variables 326 Defining the Objectives 327 Defining the Constraints 327 Implementing the Model 327 Determining Target Values for the Objectives 328 Summarizing the Target Solutions 331 Determining a GP Objective 332 The MINIMAX Objective 333 Implementing the Revised Model 334 Solving the Model 335

Comments on MOLP 337

Summary 338

References 339

The World of Management Science 339

Questions and Problems 340

Cases 351

8. Nonlinear Programming and Evolutionary Optimization 354

Introduction 354

The Nature of NLP Problems 355

Solution Strategies for NLP Problems 356

Local vs. Global Optimal Solutions 357

Economic Order Quantity Models 360
Implementing the Model 362 Solving the Model 363 Analyzing the Solution 363 Comments on the EOQ Model 365

Location Problems 365
Defining the Decision Variables 367 Defining the Objective 367 Defining the Constraints 367 Implementing the Model 368 Solving the Model and Analyzing the Solution 368 Another Solution to the Problem 370 Some Comments About the Solution to Location Problems 371

Nonlinear Network Flow Problem 371
Defining the Decision Variables 372 Defining the Objective 373 Defining the Constraints 373 Implementing the Model 374 Solving the Model and Analyzing the Solution 374

Project Selection Problems 376
Defining the Decision Variables 378 Defining the Objective Function 378 Defining the Constraints 378 Implementing the Model 379 Solving the Model 381

Optimizing Existing Financial Spreadsheet Models 382
Implementing the Model 383 Optimizing the Spreadsheet Model 384 Analyzing the Solution 384 Comments on Optimizing Existing Spreadsheets 385

The Portfolio Selection Problem 386
Defining the Decision Variables 387 Defining the Objective 388 Defining the Constraints 388 Implementing the Model 389 Analyzing the Solution 391 Handling Conflicting Objectives in Portfolio Problems 392

Sensitivity Analysis 394
Lagrange Multipliers 397 Reduced Gradients 397

Solver Options for Solving NLPs 398

Evolutionary Algorithms 399

Beating the Market 401
A Spreadsheet Model for the Problem 401 Solving the Model 401 Analyzing the Solution 402

The Traveling Salesperson Problem 403
A Spreadsheet Model for the Problem 404 Solving the Model 406 Analyzing the Solution 407

Summary 408

References 408

Questions and Problems 409

Cases 424

9. Regression Analysis 429

Introduction 429

An Example 429

Regression Models 432

Simple Linear Regression Analysis 433

Defining "Best Fit" 434

Solving the Problem Using Solver 435

Solving the Problem Using the Regression Tool 437

Evaluating the Fit 439

The R^2 Statistic 442

Making Predictions 444
The Standard Error 444 Prediction Intervals for New Values of Y 444 Confidence Intervals for Mean Values of Y 447 A Note About Extrapolation 447

Statistical Tests for Population Parameters 448
Analysis of Variance 448 Assumptions for the Statistical Tests 449 A Note About Statistical Tests 451

Introduction to Multiple Regression 451

A Multiple Regression Example 453

Selecting the Model 453
Models with One Independent Variable 455 Models with Two Independent Variables 456 Inflating R^2 458 The Adjusted-R^2 Statistic 458 The Best Model with Two Independent Variables 459 Multicollinearity 459 The Model with Three Independent Variables 460

Making Predictions 461

Binary Independent Variables 462

Statistical Tests for the Population Parameters 463

Polynomial Regression 463
Expressing Nonlinear Relationships Using Linear Models 465 Summary of Nonlinear Regression 468

Summary 469

References 470

The World of Management Science 470

Questions and Problems 471

Cases 482

10. Discriminant Analysis 485

Introduction 485

The Two-Group DA Problem 486
Group Locations and Centroids 487 Calculating Discriminant Scores 489 The Classification Rule 491 Refining the Cutoff Value 493 Classification Accuracy 494 Classifying New Employees 495

The *k*-Group DA Problem 497
Multiple Discriminant Analysis 498 Distance Measures 500 MDA Classification 502

Summary 504

References 505

Questions and Problems 506

Cases 511

11. Time Series Forecasting 515

Introduction 515

Time Series Methods 516

Measuring Accuracy 517

Stationary Models 517

Moving Averages 518
Forecasting with the Moving Average Model 521

Weighted Moving Averages 522
Forecasting with the Weighted Moving Average Model 524

Exponential Smoothing 525
Forecasting with the Exponential Smoothing Model 528

Seasonality 529

Stationary Data with Additive Seasonal Effects 529
Forecasting with the Model 534

Stationary Data with Multiplicative Seasonal Effects 534
Forecasting with the Model 537

Trend Models 538
An Example 538

Double Moving Average 539
Forecasting with the Model 541

Double Exponential Smoothing (Holt's Method) 542
Forecasting with Holt's Method 544

Holt-Winter's Method for Additive Seasonal Effects 545
Forecasting with Holt-Winter's Additive Method 549

Holt-Winter's Method for Multiplicative Seasonal Effects 550
Forecasting with Holt-Winter's Multiplicative Method 554

Modeling Time Series Trends Using Regression 554

Linear Trend Model 554
Forecasting with the Linear Trend Model 555

Quadratic Trend Model 558
Forecasting with the Quadratic Trend Model 559

Modeling Seasonality with Regression Models 560

Adjusting Trend Predictions with Seasonal Indices 561
Computing Seasonal Indices 562 Forecasting with Seasonal Indices 563 Refining the Seasonal Indices 564

Seasonal Regression Models 566
The Seasonal Model 567 Forecasting with the Seasonal Regression Model 570

Crystal Ball Predictor 571
Using CB Predictor 571

Combining Forecasts 576

Summary 577

Questions and Problems 579

Cases 589

12. Introduction to Simulation Using Crystal Ball 595

Introduction 595

Random Variables and Risk 596

Why Analyze Risk? 596

Methods of Risk Analysis 597
Best-Case/Worst-Case Analysis 597 What-If Analysis 598 Simulation 599

A Corporate Health Insurance Example 599
A Critique of the Base Case Model 601

Spreadsheet Simulation Using Crystal Ball 602
Starting Crystal Ball 602

Random Number Generators 603
Discrete vs. Continuous Random Variables 606

Preparing the Model for Simulation 607
Alternate RNG Entry 609

Running the Simulation 610
Selecting the Output Cells to Track 610 Selecting the Number of Iterations 611 Determining the Sample Size 612 Running the Simulation 612

Data Analysis 613
The Best Case and the Worst Case 613 Viewing the Distribution of the Output Cells 614 Viewing the Cumulative Distribution of the Output Cells 615 Obtaining Other Cumulative Probabilities 616

Incorporating Graphs and Statistics into a Spreadsheet 617

The Uncertainty of Sampling 618
Constructing a Confidence Interval for the True Population Mean 618 Constructing a Confidence Interval for a Population Proportion 620 Sample Sizes and Confidence Interval Widths 621

The Benefits of Simulation 621

Additional Uses of Simulation 621

A Reservation Management Example 622
Implementing the Model 623 Using the Decision Table Tool 625

An Inventory Control Example 629
Creating the RNGs 630 Implementing the Model 631 Replicating the Model 634 Optimizing the Model 634 Comment on Using OptQuest 637

A Project Selection Example 638
A Spreadsheet Model 639 Solving the Problem with OptQuest 640 Considering Other Solutions 642

15. Decision Analysis 754

Introduction 754

Good Decisions vs. Good Outcomes 755

Characteristics of Decision Problems 755

An Example 756

The Payoff Matrix 757
Decision Alternatives 757 States of Nature 757 The Payoff Values 758

Decision Rules 759

Nonprobabilistic Methods 760
The Maximax Decision Rule 760 The Maximin Decision Rule 761 The Minimax Regret Decision Rule 761

Probabilistic Methods 764
Expected Monetary Value 765 Expected Regret 766 Sensitivity Analysis 768

The Expected Value of Perfect Information 770

Decision Trees 771
Rolling Back a Decision Tree 773

Using TreePlan 775
Adding Branches 775 Adding Event Nodes 776 Adding the Cash Flows 780 Determining the Payoffs and EMVs 782 Other Features 782

Multistage Decision Problems 784
A Multistage Decision Tree 785

Analyzing Risk in a Decision Tree 786
Risk Profiles 788 Strategy Tables 789

Using Sample Information in Decision Making 791
Conditional Probabilities 793 The Expected Value of Sample Information 793

Computing Conditional Probabilities 794
Bayes's Theorem 796

Utility Theory 797
Utility Functions 798 Constructing Utility Functions 799 Using Utilities to Make Decisions 801 The Exponential Utility Function 802 Incorporating Utilities in TreePlan 803

Multicriteria Decision Making 805

The Multicriteria Scoring Model 806

The Analytic Hierarchy Process 809
Pairwise Comparisons 809 Normalizing the Comparisons 810 Consistency 811 Obtaining Scores for the Remaining Criteria 814 Obtaining Criterion Weights 814 Implementing the Scoring Model 817
