|-------------------------------------|------------|
| <i>Preface</i>                      | <i>v</i>   |
| <i>Editors-in-Chief and Authors</i> | <i>vii</i> |
| <i>List of Contributors</i>         | <i>ix</i>  |

## **PART I — GENERAL ISSUES**

|                                                                     |           |
|---------------------------------------------------------------------|-----------|
| <b>1. Protection of Multimedia Content in Distribution Networks</b> | <b>3</b>  |
| A. M. Eskicioglu and E. J. Delp                                     |           |
| <b>2. Vulnerabilities of Multimedia Protection Schemes</b>          | <b>63</b> |
| M. F. Mansour and A. H. Tewfik                                      |           |

## **PART II — MULTIMEDIA ENCRYPTION**

|                                                                 |            |
|-----------------------------------------------------------------|------------|
| <b>3. Fundamentals of Multimedia Encryption Techniques</b>      | <b>95</b>  |
| B. Furht, D. Socek, and A. M. Eskicioglu                        |            |
| <b>4. Chaos-Based Encryption for Digital Images and Videos</b>  | <b>133</b> |
| S. Li, G. Chen, and X. Zheng                                    |            |
| <b>5. Key Management and Protection for IP Multimedia</b>       | <b>169</b> |
| R. Blom, E. Carrara, F. Lindholm,<br>K. Norrman, and M. Näslund |            |
| <b>6. Streaming Media Encryption</b>                            | <b>197</b> |
| H. Yu                                                           |            |

## **PART III — MULTIMEDIA WATERMARKING**

|                                                              |            |
|--------------------------------------------------------------|------------|
| <b>7. Survey of Watermarking Techniques and Applications</b> | <b>221</b> |
| E. Muharemagic and B. Furht                                  |            |

|                                                                                                               |            |
|---------------------------------------------------------------------------------------------------------------|------------|
| <b>8. Robust Identification of Audio Using Watermarking and Fingerprinting</b>                                | <b>261</b> |
| T. Kalker and J. Haitsma                                                                                      |            |
| <b>9. High-Capacity Real-Time Audio Watermarking with Perfect Correlation Sequence and Repeated Insertion</b> | <b>283</b> |
| S.-C. Pei, Y.-F. Hsu, and Y.-W. Lu                                                                            |            |
| <b>10. Multidimensional Watermark for Still Image: Parallel Embedding and Detection</b>                       | <b>311</b> |
| B. Hu                                                                                                         |            |
| <b>11. Image Watermarking Method Resistant to Geometric Distortions</b>                                       | <b>331</b> |
| H. Kim                                                                                                        |            |
| <b>12. Fragile Watermarking for Image Authentication</b>                                                      | <b>359</b> |
| E. Izquierdo                                                                                                  |            |
| <b>13. New Trends and Challenges in Digital Watermarking Technologies. Applications for Printed Materials</b> | <b>387</b> |
| Z. Liu                                                                                                        |            |
| <b>14. Robust Watermark Detection from Quantized MPEG Video Data</b>                                          | <b>437</b> |
| D. Simitopoulos, A. Briassouli, and M. G. Strintzis                                                           |            |
| <b>15. Image Watermarking Robust to Both Geometric Distortion and JPEG Compression</b>                        | <b>467</b> |
| X. Kang, J. Huang, and Y. Q. Shi                                                                              |            |
| <b>16. Reversible Watermarks Using a Difference Expansion</b>                                                 | <b>493</b> |
| A. M. Alattar                                                                                                 |            |
| <b>PART IV — MULTIMEDIA DATA HIDING, FINGERPRINTING, AND AUTHENTICATION</b>                                   |            |
| <b>17. Lossless Data Hiding: Fundamentals, Algorithms, and Applications</b>                                   | <b>531</b> |
| Y. Q. Shi, G. Xuan, and W. Su                                                                                 |            |

|                                                                                                        |            |
|--------------------------------------------------------------------------------------------------------|------------|
| <b>18. Attacking Multimedia Protection Systems via Blind Pattern Matching</b>                          | <b>549</b> |
| D. Kirovski and J.-L. Dugelay                                                                          |            |
| <b>19. Digital Media Fingerprinting: Techniques and Trends</b>                                         | <b>577</b> |
| W. Luh and D. Kundur                                                                                   |            |
| <b>20. Scalable Image and Video Authentication</b>                                                     | <b>605</b> |
| D. Skraparlis                                                                                          |            |
| <b>21. Signature-Based Media Authentication</b>                                                        | <b>629</b> |
| Q. Sun and S.-F. Chang                                                                                 |            |
| <b>PART V — APPLICATIONS</b>                                                                           |            |
| <b>22. Digital Watermarking Framework: Applications, Parameters, and Requirements</b>                  | <b>675</b> |
| K. Levy and T. Rodriguez                                                                               |            |
| <b>23. Digital Rights Management for Consumer Devices</b>                                              | <b>691</b> |
| J. Lotspiech                                                                                           |            |
| <b>24. Adult Image Filtering for Internet Safety</b>                                                   | <b>715</b> |
| H. Zheng, M. Daoudi, C. Tombelle, and C. Djeraba                                                       |            |
| <b>25. Combined Indexing and Watermarking of 3-D Models Using the Generalized 3-D Radon Transforms</b> | <b>733</b> |
| P. Daras, D. Zarpalas, D. Tzovaras, D. Simitopoulos, and M. G. Strintzis                               |            |
| <b>26. Digital Rights Management Issues for Video</b>                                                  | <b>759</b> |
| S. Emmanuel and M. S. Kankanhalli                                                                      |            |
| <i>Index</i>                                                                                           | <b>789</b> |
