

RECENT DEVELOPMENTS IN

BIOLOGICALLY INSPIRED COMPUTING

LEANDRO N. DE CASTRO &
FERNANDO J. VON ZUBEN

Recent Developments in Biologically Inspired Computing

Table of Contents

Foreword vi

Preface vii

SECTION I: INTRODUCTION

Chapter I. From Biologically Inspired Computing to Natural Computing 1

Leandro Nunes de Castro, Catholic University of Santos, Brazil

Fernando J. Von Zuben, State University of Campinas, Brazil

SECTION II: EVOLUTIONARY ALGORITHMS

Chapter II. Evolutionary Turing Machines: The Quest for Busy Beavers 9

Penousal Machado, ISEC, Portugal

Francisco B. Pereira, ISEC, Portugal

Jorge Tavares, CISUC, Portugal

Ernesto Costa, CISUC, Portugal

Amílcar Cardoso, CISUC, Portugal

Chapter III. Generalized Extremal Optimization: A New Meta-Heuristic Inspired by a Model of Natural Evolution 41

Fabiano Luis de Sousa, INPE, Brazil

Fernando Manuel Ramos, INPE, Brazil

Roberto Luiz Galski, INPE, Brazil

Issamu Muraoka, INPE, Brazil

Chapter IV. Genetic Programming Using a Turing-Complete Representation: Recurrent Network Consisting of Trees	61
<i>Taro Yabuki, The University of Tokyo, Japan</i>	
<i>Hitoshi Iba, The University of Tokyo, Japan</i>	

Chapter V. Gene Expression Programming and the Evolution of Computer Programs	82
<i>Cândida Ferreira, Gepsoft, UK</i>	

Chapter VI. The Clonal Selection Principle for In Silico and In Vitro Computing	104
<i>Vincenzo Cutello, University of Catania, Italy</i>	
<i>Giuseppe Nicosia, University of Catania, Italy</i>	

SECTION III: SWARM INTELLIGENCE

Chapter VII. Integrating Evolutionary Computation Components in Ant Colony Optimization	148
<i>Sergio Alonso, University of Granada, Spain</i>	
<i>Oscar Cerdón, University of Granada, Spain</i>	
<i>Iñaki Fernández de Viana, Universidad de Huelva, Spain</i>	
<i>Francisco Herrera, University of Granada, Spain</i>	

Chapter VIII. Ant Colony Algorithms for Steiner Trees: An Application to Routing in Sensor Networks	181
<i>Gurdip Singh, Kansas State University, USA</i>	
<i>Sanjoy Das, Kansas State University, USA</i>	
<i>Shekhar V. Gosavi, Kansas State University, USA</i>	
<i>Sandeep Pujar, Kansas State University, USA</i>	

Chapter IX. The Influence of Pheromone and Adaptive Vision in the Standard Ant Clustering Algorithm	207
<i>Vahid Sherafat, State University of Campinas, Brazil</i>	
<i>Leandro Nunes de Castro, Catholic University of Santos, Brazil</i>	
<i>Eduardo Raul Hruschka, Catholic University of Santos, Brazil</i>	

Chapter X. Particle Swarms: Optimization Based on Sociocognition	235
<i>James Kennedy, U.S. Department of Labor, USA</i>	

SECTION IV: ARTIFICIAL LIFE AND ARTIFICIAL CREATURES

Chapter XI. Synthetic Approach to Semiotic Artificial Creatures	270
<i>Angelo Loula, State University of Campinas, Brazil</i>	
<i>Ricardo Gudwin, State University of Campinas, Brazil</i>	
<i>Sidarta Ribeiro, Duke University Medical School, USA</i>	
<i>Ivan de Araújo, University of Oxford, UK</i>	
<i>João Queiroz, State University of Campinas, Brazil</i>	

Chapter XII. Perspectives for Strong Artificial Life	301
<i>Jean-Philippe Rennard, Grenoble Graduate School of Business, France</i>	

SECTION V: INFORMATION PROCESSING AND COGNITIVE SYSTEMS

Chapter XIII. Controlling Robots with Fractal Gene Regulatory Networks	320
<i>Peter J. Bentley, University College London, UK</i>	

Chapter XIV. Once More Unto the Breach: Towards Artificial Homeostasis	340
<i>Mark Neal, University of Wales, UK</i>	
<i>Jon Timmis, University of Kent, UK</i>	

Chapter XV. Biologically Inspired Collective Robotics	367
<i>C. Ronald Kube, Syncrude Research Centre, Canada and</i>	
<i>University of Alberta, Canada</i>	
<i>Chris A. C. Parker, University of Alberta, Canada</i>	
<i>Tao Wang, University of Alberta, Canada</i>	
<i>Hong Zhang, University of Alberta, Canada</i>	

Chapter XVI. Continuous Attractor Neural Networks	398
<i>Thomas P. Trappenberg, Dalhousie University, Canada</i>
