

ELECTRONIC COMMUNICATIONS FOR TECHNICIANS

S E C O N D E D I T I O N

Tom Wheeler

Contents

1 Introduction to RF Communications 1

- 1-1 Communication Systems 1
- 1-2 A Simple Radio System 3
- 1-3 The Need for Modulation 5
- 1-4 A Practical Radio System 9
- 1-5 The Radio-Frequency Spectrum 11
- 1-6 Digital Communications 12
- 1-7 How to Troubleshoot Systems 13

2 Signal Analysis 18

- 2-1 Two Domains 18
- 2-2 Complex Waveforms 24
- 2-3 Noise Sources 34
- 2-4 Signal-to-Noise Ratio and Noise Figure 41
- 2-5 Noise Reduction Techniques 45
- 2-6 Fourier Series for Common Waveforms 46

3 Amplitude Modulation 52

- 3-1 Generating an AM Signal 52
- 3-2 Measuring AM Signals in the Time Domain 56
- 3-3 Frequency Domain AM Analysis 61
- 3-4 Power and Efficiency 67
- 3-5 Spectrum Analyzer Measurements 72

4 AM Transmitters 84

- 4-1 Low- and High-Level Transmitters 85
- 4-2 Oscillator Theory 91
- 4-3 Three Oscillators 94
- 4-4 Crystal-Controlled Oscillators 104
- 4-5 RF Amplifiers 112
- 4-6 RF Modulators 121
- 4-7 High-Level Transmitter Circuit Analysis 126
- 4-8 Measuring Transmitter Performance 129
- 4-9 Troubleshooting Transmitters 132

5 AM Receivers 137

- 5-1 Receiver Operation 138
- 5-2 AM Detection 141
- 5-3 The TRF Receiver 144

5-4	The Superheterodyne Receiver	149
5-5	Superheterodyne Receiver Circuit Analysis	157
5-6	Integrated Circuit Receivers	162
5-7	Alignment of Receivers	163
5-8	Troubleshooting Receivers	165
6	Single Sideband Systems	170
6-1	SSB Versus AM: Types of Sideband Signals	171
6-2	SSB Signal Generation: Filter Method	177
6-3	SSB Signal Generation: Phasing and DSP Methods	190
6-4	Frequency-Agile SSB Transmitters	194
6-5	SSB Receivers	198
6-6	SSB Transceivers	207
7	Systems for Frequency Generation	213
7-1	The Phase-Locked Loop	214
7-2	PLL Synthesizers	223
7-3	How Software Controls a PLL Synthesizer	231
7-4	DDS Synthesizers	235
7-5	A Complete Frequency Synthesizer	239
7-6	Troubleshooting Frequency Synthesizers	243
8	Frequency Modulation: Transmission	249
8-1	A Simple FM Transmitter	250
8-2	FM Signal Analysis	253
8-3	Frequency Modulated Oscillators	265
8-4	Three FM Transmitters	271
8-5	Special Topics	278
8-6	A Simple FM Broadcast Transmitter	282
8-7	FM Stereo and SCA Systems	286
8-8	Measuring the Performance of FM Transmitters	289
9	FM Receivers	294
9-1	FM Superheterodyne Receivers	294
9-2	Detection of FM Signals	299
9-3	A Complete FM Receiver	308
9-4	Synthesized FM Receivers	311
9-5	FM Stereo and SCA Decoding	315
9-6	Alignment of FM Receivers	319
9-7	Troubleshooting FM Receivers	325
10	Television	330
10-1	Analog Television Principles	331
10-2	The Analog Video Signal	335
10-3	TV Receiver Operation	342
10-4	Color Television	351

- 10-5 High Definition Television (HDTV) 358
- 10-6 Troubleshooting TV Receivers 365

11 Transmission Lines 372

- 11-1 Basic Construction of Transmission Lines 372
- 11-2 Electrical Characteristics of Transmission Lines 377
- 11-3 Impedance Mismatches and Standing Waves 386
- 11-4 Impedance Matching Devices 395
- 11-5 Introduction to the Smith Chart 404
- 11-6 Troubleshooting Transmission Lines 414

12 Antennas and Wave Propagation 421

- 12-1 Electrical and Electromagnetic Energy 422
- 12-2 The Dipole and Marconi Antennas 428
- 12-3 Directional Antennas 438
- 12-4 Special Antennas 445
- 12-5 Antenna Troubleshooting and RF Safety 452
- 12-6 Wave Propagation 456
- 12-7 Link Budgets 465

13 Microwave Communication Systems 473

- 13-1 Microwave Construction Techniques 474
- 13-2 Microwave Transmission Lines 479
- 13-3 Microwave Oscillators 489
- 13-4 Microwave Amplifiers 498
- 13-5 Pulse and Doppler Radar Systems 506

14 Telephony and Cellular Networks 516

- 14-1 The System View 517
- 14-2 The Local Loop: Operation, Signaling, and Telephone Circuitry 520
- 14-3 Switching and Encoding: PCM 531
- 14-4 Wireless Telephony: AMPS and PCS, CDMA, GSM, TDMA 541
- 14-5 Special Topics: Caller ID, Broadband Internet Services 554

15 Introduction to Data Communications 563

- 15-1 Nature of Digital Data 564
- 15-2 Network Topologies 569
- 15-3 Modems and Digital Modulation Techniques 576
- 15-4 Asynchronous Data and UARTs 592
- 15-5 Error Detection and Correction 608
- 15-6 The RS232/EIA232 Interface Standards 615
- 15-7 Troubleshooting Data Communications Systems 621

16 Networking Fundamentals 627

- 16-1 Network Hardware and Media 627
- 16-2 The ISO/OSI Model 635

- 16-3 The Internet and Internet Protocol (IP) Addressing 640
- 16-4 IP Addressing, Subnets, and Gateways 645
- 16-5 DHCP and ARP 655
- 16-6 Transport: TCP and UDP 658
- 16-7 Troubleshooting Networks 666

17 The Global Positioning System 674

- 17-1 Satellites and Orbits 675
- 17-2 How GPS Works 680
- 17-3 GPS Segments and Navigation Signal Processing 686
- 17-4 Reducing Position Error: Enhanced GPS 697
- 17-5 Troubleshooting GPS Installations 701

18 Fiber-Optic and Laser Technology 707

- 18-1 Fiber-Optic Construction and Operation 708
- 18-2 Propagation Modes and Dispersion 716
- 18-3 Light Wave Sources and Modulation Circuits 723
- 18-4 Light Wave Detection 735
- 18-5 Troubleshooting Fiber-Optic Systems 744

Appendix A: Decibels 750

Appendix B: Bipolar Transistor Fundamentals 754

Appendix C: Amateur Radio Communications 765

Appendix D: Well-Known TCP and UDP Port Numbers 767

Appendix E: ASCII, EBCDIC, and Unicode Character Sets 770

Glossary 772
