Six Ideas That Shaped Physics

Unit E: Electric and Magnetic Fields Are Unified

Second Edition

Thomas A. Moore

Contents: Unit E

Electric and Magnetic Fields Are Unified

About the Author xiii

Preface xv

Introduction for Students xx

Chapter E1

Electrostatics 2

Chapter Overview 2
E1.1 Introduction to the Unit 4
E1.2 What Is the Nature of Charge? 5
E1.3 How Objects Become Charged 7
E1.4 Conservation of Charge 9
E1.5 Coulomb's Law 10
E1.6 Conductors and Insulators 13
E1.7 Electrostatic Polarization 15
Two-Minute Problems 18
Homework Problems 18
Answers to Exercises 20

Chapter E2

Electric Fields 22

Chapter Overview 22
E2.1 The Field Concept 24
E2.2 An Operational Definition of $\vec{E}$ 25
E2.3 The Field of a Point Charge 27
E2.4 The Superposition Principle 29
E2.5 The Field of a Dipole 31
E2.6 Handling Charge Distributions 33
Two-Minute Problems 36
Homework Problems 37
Answers to Exercises 41

Chapter E3

Electric Potential 42

Chapter Overview 42
E3.1 The Electric Potential 44
E3.2 Calculating ϕ from $\vec{E}$ 47
E3.3 Calculating $\vec{E}$ from ϕ 49
E3.4 Useful Theorems About Charge Distributions 53
E3.5 The Electric Field as Dispersed Energy 55
Two-Minute Problems 57
Homework Problems 58
Answers to Exercises 62

Chapter E4

Conductors 64

Chapter Overview 64
E4.1 Introduction to Current 66
E4.2 A Microscopic Model 67
E4.3 Current Density 71
E4.4 Static Charges on Conductors 74
E4.5 Capacitance 77
Two-Minute Problems 79
Homework Problems 79
Answers to Exercises 83

Chapter E5

Driving Currents 84

Chapter Overview 84
E5.1 A Mechanical Model of a Battery 86
E5.2 Surface Charges Direct Currents 87
E5.3 The Emf of a Battery 90
E5.4 Resistance 93
E5.5 The Power Dissipated in a Conductor 95
E5.6 Discharging a Capacitor 97
Two-Minute Problems 99
Homework Problems 101
Answers to Exercises 105

Chapter E6

Analyzing Circuits 106

Chapter Overview 106
E6.1 Two Wires in Series 108
E6.2 Circuit Elements in Series 110

E6.3 Circuit Diagrams 112
E6.4 Circuit Elements in Parallel 114
E6.5 Analyzing Complex Circuits 116
E6.6 Realistic Batteries 119
E6.7 Electrical Safety Issues 119
Two-Minute Problems 120
Homework Problems 121
Answers to Exercises 125

Chapter E7
Magnetic Fields 126

Chapter Overview 126
E7.1 The Phenomenon of Magnetism 128
E7.2 The Definition of the Magnetic Field 128
E7.3 Magnetic Forces on Moving Charges 130
E7.4 A Free Particle in a Uniform Magnetic Field 135
E7.5 The Magnetic Force on a Wire 138
Two-Minute Problems 143
Homework Problems 144
Answers to Exercises 149

Chapter E8
Currents and Magnets 150

Chapter Overview 150
E8.1 Creating Currents in Moving Conductors 152
E8.2 The Magnetic Field of a Moving Charge 154
E8.3 The Magnetic Field of a Wire Segment 158
E8.4 The Magnetic Field of a Long, Straight Wire 159
E8.5 The Magnetic Field of a Circular Loop 161
E8.6 *All* Magnets Involve Circulating Charges 163
Two-Minute Problems 165
Homework Problems 166
Answers to Exercises 170

Chapter E9
Symmetry and Flux 172

Chapter Overview 172
E9.1 Symmetry Arguments 174
E9.2 The Electric Fields of Symmetric Objects 174
E9.3 The Mirror Rule for Magnetic Fields 178
E9.4 The Magnetic Fields of Symmetric Current Distributions 179
E9.5 The Flux Through a Surface 183
Two-Minute Problems 186
Homework Problems 188
Answers to Exercises 190

Chapter E10
Gauss's Law 192

Chapter Overview 192
E10.1 Gauss's Law 194
E10.2 Using Gauss's Law to Calculate Electric Fields 195
E10.3 The Field of a Spherical Charge Distribution 197
E10.4 The Field of an Infinite Cylindrical Distribution 199
E10.5 The Field of an Infinite Planar Slab 201
E10.6 Gauss's Law for the Magnetic Field 204
Two-Minute Problems 206
Homework Problems 208
Answers to Exercises 212

Chapter E11
Ampere's Law 214

Chapter Overview 214
E11.1 Ampere's Law 216
E11.2 Using Ampere's Law 218
E11.3 The Magnetic Field of an Axial Current Distribution 219
E11.4 The Magnetic Field of an Infinite Planar Slab 221
E11.5 The Magnetic Field of an Infinite Solenoid 223
E11.6 Ampere's Law for the Electric Field 226
Two-Minute Problems 228
Homework Problems 230
Answers to Exercises 234

Chapter E12
The Electromagnetic Field 236

Chapter Overview 236
E12.1 Why $\vec{E}$ and $\vec{B}$ Must Be Related 238
E12.2 How the Fields Transform 242
E12.3 A Bar Moving in a Magnetic Field 248
E12.4 Motion in a Velocity Selector 249
Two-Minute Problems 250
Homework Problems 251
Answers to Exercises 255

Chapter E13
Maxwell's Equations 256

Chapter Overview 256
E13.1 Introduction to Dynamic Fields 258
E13.2 Correcting Ampere's Law 258

E13.3 Faraday's Law 262
E13.4 Gauss's Laws Need No Correction 267
E13.5 Maxwell's Equations 268
E13.6 Local Field Equations (optional) 270
Two-Minute Problems 272
Homework Problems 274
Answers to Exercises 278

Chapter E14
Induction 280

Chapter Overview 280
E14.1 Magnetic Flux and Induced EMF 282
E14.2 Lenz's Law 284
E14.3 Self-induction 285
E14.4 "Discharging" an Inductor 287
E14.5 The Energy in a Magnetic Field 289
E14.6 Transformers 291
Two-Minute Problems 294
Homework Problems 295
Answers to Exercises 298

Chapter E15
Introduction to Waves 300

Chapter Overview 300
E15.1 What Is a Wave? 302
E15.2 A Sinusoidal Wave 304
E15.3 The Phase Velocity of a Wave 307
E15.4 The Wave Equation 309
Two-Minute Problems 315
Homework Problems 316
Answers to Exercises 319

Chapter E16
Electromagnetic Waves 320

Chapter Overview 320
E16.1 Electromagnetic Waves 322
E16.2 Characteristics of Electromagnetic Waves 324
E16.3 The Energy in an Electromagnetic Wave 328
E16.4 The Power Radiated by a Charge 329
E16.5 Why the Sky Is Blue 331
E16.6 Maxwell's Rainbow 332
Two-Minute Problems 335
Homework Problems 335
Answers to Exercises 338

Glossary 341
Index 351
