CCNA

Guide to Cisco Networking

Third Edition

Kelly Caudle
Kelly Cannon

Covers all CCNA 640-801 exam objectives and
includes Lab Manual with over 50 hands-on labs!

TABLE OF

Contents

PREFACE

xvii

CHAPTER ONE

Introducing Networks

1

Introduction to Networking	2
Origin of Networking	2
Why Do We Use Networks?	2
Networking Terminology	3
Understanding the OSI Model	5
Reasons for Layering	6
Peer OSI Communication	7
Layer Functions	8
Chapter Summary	17
Key Terms	18
Review Questions	21
Case Projects	26

CHAPTER TWO

Network Devices

29

Repeaters	30
Hubs	31
Advantages and Disadvantages of Repeaters and Hubs	32
Wireless Access Points	33
Network Segmentation	34
Bridges	35
Transparent Bridges	36
Source-Routing Bridges	37
Translation Bridges	37
Advantages and Disadvantages of Bridges	37
Switches	38
Routers	40
Physical vs. Logical Addresses	41
Advantages and Disadvantages of Routers	41
Brouters	43
Gateways	43

Chapter Summary	43
Key Terms	44
Review Questions	46
Case Projects	51

CHAPTER THREE

TCP/IP and IP Addressing 53

Origins of TCP/IP	54
Overview of the TCP/IP Protocol Suite	54
Application Layer	56
Transport Layer	57
Internetwork Layer	63
Network Interface Layer	72
IP Addressing	72
MAC to IP Address Translation	73
IP Classes	73
Subnet Addressing	77
Broadcast Types	80
Subdividing IP Classes	80
Subnet Masking	82
Learning to Subnet	83
Subnetting Formulas	86
CIDR	87
Summarization	88
Variable Length Subnet Masks	89
IPv4 vs. IPv6	92
Understanding Packet Transmission	92
Routers on the Network	93
Network to Network	94
Dynamic or Static Tables	95
Transmitting Packets to Remote Segments	95
Routing Packets	96
Working with Hexadecimal Numbers	99
Chapter Summary	101
Key Terms	103
Review Questions	108
Case Projects	114

CHAPTER FOUR

Network Topology and Design	115
Physical Topologies	116
Bus	116
Star	117
Ring	118
Influence of the 5-4-3 Rule on Topologies	118
Network Architecture	120
IEEE 802	120
FDDI	125
Media	126
Twisted-Pair Cabling	126
Coaxial Cabling	128
Fiber-Optic Cable	130
Signal Degradation	133
Horizontal Cabling Standards	134
Wiring Closets	135
Proximity to the POP	136
Backbone	137
Performance Considerations	138
Connection Speeds	138
Utilization	139
Calculating Bandwidth and Throughput	140
Collisions and Contention	141
Resource Placement	141
Installing Telecommunications Connectors	142
Patch Panel	145
Testing Cable	147
Cable Testers	147
Baseline	152
LAN Design Models	152
Three-Layer Network Model	154
Two-Layer Network Model	156
One-Layer Network Model	156
Network-Management Tools	158
SNMP	159
CMIP	161
Chapter Summary	161
Key Terms	162
Review Questions	169
Case Projects	174

CHAPTER FIVE**WAN Concepts****175**

WAN Standardization	176
WAN Connection Methods	176
WAN Data Link Protocols	178
WAN Physical Layer	186
WAN Connections	186
WAN Physical Standards	187
WAN Topologies	188
Emerging WAN Connection Methods	190
Chapter Summary	190
Key Terms	192
Review Questions	195
Case Projects	199

CHAPTER SIX**Router and IOS Basics****201**

Benefits of Routing	202
Cisco Router User Interface	202
Connecting via Terminal Programs	204
System Configuration Dialog	205
User Interface	206
Configuration Modes	208
Plethora of Passwords	210
Enhanced Editing	214
Command History	216
Configuring Router Identification	216
Configuring the Time and Date	218
Switch User Interface	219
Modes and Passwords	219
Setting the Host Name	220
Router Components	221
ROM	221
Flash Memory	221
NVRAM	222
RAM/DRAM	223
Interfaces	223
Chapter Summary	226
Key Terms	227
Review Questions	229
Case Projects	233

CHAPTER SEVEN**Router Startup and Configuration 235**

Router Startup	236
POST	236
RxBoot Mode	239
Cisco IOS	239
Router Configuration Files	243
Methods for Making Changes	245
CDP	245
IP on the Router	247
IP on the Switch	248
IP Connectivity	248
Telnet	248
IP Host Names	249
Ping and Trace	249
IP Route	250
Checking the Interface	251
Router Password Recovery	255
Chapter Summary	256
Key Terms	257
Review Questions	257
Case Projects	262

CHAPTER EIGHT**Routing Protocols and Network Address Translation 263**

Network Address Translation	264
Static NAT	265
Dynamic NAT	266
Configuring Network Address Translation	268
Configuring Static NAT	268
Configuring Dynamic NAT	269
Nonroutable Protocols	272
Routed Protocols	273
Routing Protocols	274
Two Types of IGPs	276
Routing Information Protocol	281
Enabling RIP Routing	282
Configuring RIP Routing for Each Major Network	283
Show ip protocol and debug ip rip Commands	285
Interior Gateway Routing Protocol	288
Static Routing	292
Adding Static Routes	292

Chapter Summary	296
Key Terms	297
Review Questions	300
Case Projects	304

CHAPTER NINE

Advanced Routing Protocols **307**

Classful and Classless Routing Protocols	308
Routing Information Protocol version 2	314
Enhanced Interior Gateway Routing Protocol	320
EIGRP Components	322
EIGRP Configuration	329
Open Shortest Path First	331
OSPF Concepts	333
OSPF Operation	337
Single-Area OSPF Configuration	338
Controlling Route Traffic	340
Chapter Summary	341
Key Terms	341
Review Questions	342
Case Projects	345

CHAPTER TEN

Access Lists **347**

Access Lists: Usage and Rules	348
Access List Usage	348
Problems with Access Lists	349
Access List Rules	350
Standard IP Access Lists	353
Standard IP Access List Examples	357
Monitoring Standard IP Access Lists	363
Extended IP Access Lists	363
Extended IP Access List Examples	364
The “Established” Parameter	369
Monitoring Extended IP Access Lists	370
Using Named Lists	371
Controlling VTY Line Access	372
Chapter Summary	372
Key Terms	373
Review Questions	374
Case Projects	378

CHAPTER ELEVEN**PPP and ISDN****379**

PPP	380
PPP in the Protocol Stack	380
Frame Format	381
Establishing PPP Communications	384
ISDN	387
ISDN Standards	388
ISDN Operations	388
ISDN BRI Configuration Examples	393
Dialer Profiles	394
Monitoring ISDN	397
Digital Lines	398
Chapter Summary	399
Key Terms	400
Review Questions	404
Case Projects	408

CHAPTER TWELVE**Frame Relay****411**

Frame Relay Standards and Equipment	412
Virtual Circuits	414
DLCI	414
Frame Relay Map	414
Subinterfaces	415
LMI	416
Inverse ARP	417
Encapsulation Types	417
Split Horizon	418
Performance Parameters	421
Congestion	422
Frame Format	422
Frame Relay Topologies	424
Frame Relay Configuration	425
Basic Multipoint Configuration with Two Routers	425
Multipoint Configuration Using a Subinterface	427
Point-to-Point Configuration Using Subinterfaces	428
Frame Relay Static Mapping	430
Non-Cisco Routers	430
Keepalive Configuration	430

Monitoring Frame Relay	430
Chapter Summary	432
Key Terms	433
Review Questions	434
Case Projects	438
CHAPTER THIRTEEN	
Switching and VLANs	439
Ethernet Operations	440
CSMA/CD	440
Latency	441
Ethernet Errors	442
Fast Ethernet	444
Half- and Full-Duplex Communications	446
LAN Segmentation	448
Segmenting with Bridges	448
Segmenting with Routers	449
LAN Switching	450
Segmentation with Switches	450
Switch Operations	452
Securing Switch Ports	453
Switching Methods	454
Spanning Tree Protocol	458
Virtual LANs	461
Benefits of VLANs	463
Dynamic vs. Static VLANs	464
VLAN Standardization	465
Creating VLANs	466
Link Types and Configuration	468
Trunking Protocol	469
Switch Interface Descriptions	471
Nonswitching Hubs and VLANs	472
Routers and VLANs	472
Chapter Summary	475
Key Terms	476
Review Questions	482
Case Projects	486
APPENDIX A	
CCNA Certification Objectives	487

APPENDIX B	
Additional Resources	491
Internet Resources	491
Standards Organizations	491
Technology Reference	492
Networking Overviews and Tutorials	492
Technical Forums	492
Cisco Routers	492
Exam Preparation Resources	493
 APPENDIX C	
A Networking Professional's Toolkit	495
 APPENDIX D	
Command Summary	505
Identification and Navigation	506
Passwords	508
Router/Switch General and Startup Configuration	509
Examining the Router and Switch	510
Interface Configuration	511
IP Commands	512
Access Lists	513
WAN Configuration	514
VLAN Configuration	515
 APPENDIX E	
Troubleshooting Summary	517
Router Troubleshooting Commands	518
Switch Troubleshooting Commands	522
Using Troubleshooting Commands	524
Troubleshooting Example	524
 LAB MANUAL CHAPTER ONE	
Introducing Networks	527
Lab 1.1 Understanding the OSI Model	528
Lab 1.2 Understanding the Five Steps of Data Encapsulation	530
Lab 1.3 Identifying Data Link and Network Layer Addresses	533
Lab 1.4 Connection-Oriented vs. Connectionless Communications	537

LAB MANUAL CHAPTER TWO**Network Devices****539**

- Lab 2.1 Simulating a Network by Connecting a CSU/DSU, Router, Bridge, Three Hubs, and Nine Computers 540
- Lab 2.2 Understanding Various Device Functions 543
- Lab 2.3 Understanding the Difference Between Bridges and Switches 546

LAB MANUAL CHAPTER THREE**TCP/IP and IP Addressing****551**

- Lab 3.1 Determine an IP Addressing Scheme for Network 192.3.2.0 552
- Lab 3.2 Decode the IP Address 172.16.31.255 /20 555
- Lab 3.3 Decode the IP Address 120.15.179.255 /18 558
- Lab 3.4 Design an Efficient IP Addressing Scheme for Network 176.10.0.0 560
- Lab 3.5 Determine IP and MAC Header Information in an ARP Request and ARP Reply 564
- Lab 3.6 Determine IP and MAC Header Information in an RARP Request 566
- Lab 3.7 Determine IP and MAC Header Information for a Data Packet 568
- Lab 3.8 Perform Binary/Decimal/Hexadecimal Conversions 571

LAB MANUAL CHAPTER FOUR**Network Topology and Design****575**

- Lab 4.1 Make and Test a Straight-Through Patch Cable 576
- Lab 4.2 Make and Test a Crossover Patch Cable 578
- Lab 4.3 Identify Various Cable Types and Connectors 581
- Lab 4.4 Punch Down and Test UTP Cable 583
- Lab 4.5 Calculate Bandwidth 585

LAB MANUAL CHAPTER FIVE**WAN Concepts****589**

- Lab 5.1 Identify Connection Methods Used with WAN Data Link Layer Protocols 590
- Lab 5.2 Understand WAN Switching Terminology 591
- Lab 5.3 Associate WAN Technologies with the Appropriate Layer of the OSI Reference Model 594

LAB MANUAL CHAPTER SIX**Router and IOS Basics****597**

- Lab 6.1 Connect the Internetwork Lab 598
 - Lab 6.2 Configure HyperTerminal to Access a Cisco Router 601
 - Lab 6.3 Use the System Configuration Dialog to Configure a Cisco Router 603
 - Lab 6.4 Configure Console and Aux Passwords 607
 - Lab 6.5 Use Help, the Command History, Enhanced Editing Features, and the Show Command 610
-

LAB MANUAL CHAPTER SEVEN**Router Startup and Configuration 615**

Lab 7.1 Configure IP Addresses and IP Hosts	616
Lab 7.2 Install, Configure, and Use a TFTP Server	621
Lab 7.3 Configure a Message and Interface Description	625
Lab 7.4 Use the CDP, Ping, Trace, and Telnet Commands	627
Lab 7.5 Copy and Paste Router Configurations	631
Lab 7.6 Use Boot System Commands and the Configuration Register	635

LAB MANUAL CHAPTER EIGHT**Routing Protocols and Network Address Translation 639**

Lab 8.1 Understand Terms and Concepts Related to Routing and NAT	640
Lab 8.2 Configure Static Routes	642
Lab 8.3 Configure RIP	646
Lab 8.4 Configure IGRP	649

LAB MANUAL CHAPTER NINE**Advanced Routing Protocols 653**

Lab 9.1 Identify the Characteristics of Various Routing Protocols	654
Lab 9.2 Configure RIPv2	655
Lab 9.3 Configure EIGRP	659
Lab 9.4 Configure OSPF in a Single Area	661

LAB MANUAL CHAPTER TEN**Access Lists 665**

Lab 10.1 Create and Apply a Standard IP Access List on the Lab-d Router	666
Lab 10.2 Create and Apply an Extended IP Access List on the Lab-b Router	670
Lab 10.3 Create and Apply a Named Access List on the Lab-c Router	675

LAB MANUAL CHAPTER ELEVEN**PPP and ISDN 679**

Lab 11.1 Configure PPP with CHAP and PAP	680
Lab 11.2 ISDN BRI Configuration	683

LAB MANUAL CHAPTER TWELVE**Frame Relay 687**

Lab 12.1 Set Up a Test Frame Relay Network	688
Lab 12.2 Configure the Lab-c Router to Simulate a Frame Relay Switch	692
Lab 12.3 Configure the Lab-b and Lab-d Routers for Frame Relay	694

LAB MANUAL CHAPTER THIRTEEN**Switching and VLANs****697**

Lab 13.1 Configure a Cisco 1900 Switch Using the Menus

698

Lab 13.2 Configure a Cisco 1900 Switch Using the Command-Line Interface

702

Lab 13.3 Evaluate Hub Performance

711

Lab 13.4 Evaluate Switch Performance

715

Lab 13.5 Understand Switching and LAN Design Concepts and Terminology

719

Lab 13.6 Configure “Router-on-a-Stick”

722

GLOSSARY**735****INDEX****763**
