## ELECTRICAL POWER AND CONTROLS

SECONDEDITION

Timothy L. Skvarenina William E. DeWitt

## **CONTENTS**

I. FUNDAMENTALS OF ENERGY AND THE POWER SYSTEM

Objectives 2

	Introduction 3	
	Gravitational Force 3	
	Energy 4	
	Thermodynamic Considerations 12	
	Power 12	
	Torque 14	
	The Power System 15	
	The National Power Grid 24	
	Changing Times for the Electric Utilities 27	
	Summary 34	
	Case Studies	
	1–1 Greenhouse Gases and Global Warming 36	
	1–2 The California Electricity Crisis 43	
	1–3 Enron 50	
	Important Numbered Equations From This Chapter 58	
	Questions 58	
	Problems 58	
2.	SINGLE- AND THREE-PHASE POWER	60
	Objectives 60	
	Introduction 61	
	Electrical Power 61	
	DC Circuits 61	
		ix

2

Three-Phase AC Circuits 82 Power Factor Correction 88 Summary 94 Case Study 2-1 Power Factor Study Reduces Energy Costs at Aluminum Extrusion Plant 95 Important Numbered Equations From This Chapter 98 Questions 98 Problems 99  3. POWER QUALITY CONSIDERATIONS Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172 Summary 173		Single-Phase AC Circuits 62	
Summary 94 Case Study 2—1 Power Factor Study Reduces Energy Costs at Aluminum Extrusion Plant 95 Important Numbered Equations From This Chapter 98 Questions 98 Problems 99  3. POWER QUALITY CONSIDERATIONS  Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Three-Phase AC Circuits 82	
Case Study 2-1 Power Factor Study Reduces Energy Costs at Aluminum Extrusion Plant 95 Important Numbered Equations From This Chapter 98 Questions 98 Problems 99  3. POWER QUALITY CONSIDERATIONS Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Power Factor Correction 88	
2-1 Power Factor Study Reduces Energy Costs at Aluminum Extrusion Plant 95 Important Numbered Equations From This Chapter 98 Questions 98 Problems 99  3. POWER QUALITY CONSIDERATIONS Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Summary 94	
Costs at Aluminum Extrusion Plant 95 Important Numbered Equations From This Chapter 98 Questions 98 Problems 99  3. POWER QUALITY CONSIDERATIONS Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Case Study	
Important Numbered Equations From This Chapter 98 Questions 98 Problems 99  3. POWER QUALITY CONSIDERATIONS Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		,	
Questions 98 Problems 99  3. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		•	
3. POWER QUALITY CONSIDERATIONS  Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172			
Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Problems 99	
Objectives 102 Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172			
Introduction 103 Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172	3.	POWER QUALITY CONSIDERATIONS	102
Disturbances 103 What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Objectives 102	
What Are Harmonics? 108 Why Worry About Harmonic Currents? 117 Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Introduction 103	
Why Worry About Harmonic Currents? 117  Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Disturbances 103	
Notching 131 IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		What Are Harmonics? 108	
IEEE Standard 519 132 Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Why Worry About Harmonic Currents? 117	
Dealing With Disturbances 134 Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Notching 131	
Troubleshooting Power Quality Problems 145 Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		IEEE Standard 519 132	
Summary 148 References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Dealing With Disturbances 134	
References 149 Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Troubleshooting Power Quality Problems 145	
Important Numbered Equations From This Chapter 149 Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS 152 Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Summary 148	
Questions 150 Problems 150  4. MAGNETIC MATERIALS AND CIRCUITS 152 Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		References 149	
4. MAGNETIC MATERIALS AND CIRCUITS  Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Important Numbered Equations From This Chapter 149	
4. MAGNETIC MATERIALS AND CIRCUITS  Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Questions 150	
Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Problems 150	
Objectives 152 Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172			
Introduction 153 Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172	4.	MAGNETIC MATERIALS AND CIRCUITS	152
Magnetic Fields 153 Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Objectives 152	
Properties of Magnetic Materials 163 Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Introduction 153	
Electrical Circuit Analogy 167 Hysteresis 170 Magnetic Core Losses 172		Magnetic Fields 153	
Hysteresis 170 Magnetic Core Losses 172		Properties of Magnetic Materials 163	
Hysteresis 170 Magnetic Core Losses 172		-	
Magnetic Core Losses 172		<u> </u>	
•		•	
		Summary 173	

	Questions 174	
	Problems 174	
5.	TRANSFORMERS	178
	Objectives 178	
	Introduction 179	
	Transformer Nameplate Data 179	
	Transformer Construction 180	
	Ideal Transformer Operation 187	
	Exciting Current 192	
	Transformer Equivalent Circuits 198	
	Determining Circuit Parameters 205	
	Transformer Efficiency 211	
	Transformer Frequency Response 214	
	Voltage Regulation 216	
	K-Factor-Rated Transformers 223	
	Autotransformers 224	
	Instrument Transformers 227	
	Three-Phase Transformers 230	
	Percent Impedance 241	
	Summary 242	-
	Important Numbered Equations From This Chapter 242	
	Questions 243	
	Problems 244	
6.	INTRODUCTION TO MOTORS AND GENERATORS	248
	Objectives 248	
	Introduction 249	
	Five Electromagnetic Principles 249	
	A Simple AC Machine 258	
	A Practical AC Synchronous Machine 262	
	A Simple DC Machine 273	
	A Practical DC Machine 276	

Efficiency and Losses 278

Important Numbered Equations From This Chapter 174

	Heating, Cooling, and Machine Lifetime 282	
	Summary 285	
	Important Numbered Equations From This Chapter 285	
	Questions 286	
	Problems 286	
7.	THREE-PHASE INDUCTION MOTORS	288
	Objectives 288	
	Introduction 289	
	Construction Features 289	
	Nameplate Data 293	
	Principles of Operation 299	
	Induction Motor Equivalent Circuit 303	
	Torque-Speed Characteristic 310	
	Determination of Equivalent Circuit Parameters 314	
	Induction Motor Performance 315	
	NEMA Motor Designs 319	
	Induction Motor Efficiency 327	
	Energy-Efficient Motors 330	
	Types of Load Torques 337	
	Motor Application Information 339	
	Wiring Connections for Induction Motors 344	
	Starting Considerations for Induction Motors 345	
	Case Study	
	7–1 McBroom Electric Teams with Cummins Engine Company	350
	Summary 352	
	Important Numbered Equations From This Chapter 352	
	Questions 353	
	Problems 353	
8.	SINGLE-PHASE MOTORS	356
	Objectives 356	
	Introduction 357	

Principle of Operation of a Single-Phase Motor 357

Types of Single-Phase Motors 360

Troubleshooting 369 Questions 370 Problems 370	
POWER ELECTRONICS	372
Objectives 372	
Introduction 373	
Power Electronic Switching Devices 373	
Power Transistors 382	
Adjustable-Speed Drives 389	
Adjustable-Speed Induction Motor Drives 392	
Motor Performance Under Variable-Frequency Operation 404	
Operation of an Adjustable-Speed Drive (ASD) 410	
Selecting a Motor for Variable-Frequency Operation 413	
Brushless DC and Stepper Motors 415	
Summary 423	
Case Studies	
9–1 Optimizing Electric Motor Systems at a Corporate Campus Facility 424	
9–2 Millwater Pumping System Optimization Improves Efficiency and Saves Energy at an Automotive Glass Plant 428	
References 431	
Important Numbered Equations From This Chapter 432	
Questions 432	
Problems 432	
THE SYNCHRONOUS MACHINE	434
Objectives 434	
Introduction 435	
Synchronous Machine Construction 435	
Principles of Operation 440	
Steady-State Equivalent Circuit for a Round-Rotor Synchronous Machine 443	
Performance and Analysis of Synchronous Generators 448	
Synchronous Motors 476	
Power Factor Improvement with a Synchronous Machine 485	

9.

10.

	Efficiency and Losses in the Synchronous Machine 487 Summary 490	
	Important Numbered Equations From This Chapter 490	
	Questions 491	
	Problems 491	
11.	DC MACHINES	496
	Objectives 496	
	Introduction 497	
	Construction and Operating Principles of the DC Machine 497	
	DC Generators 513	
	DC Motors 529	
	Losses and Efficiency 543	
	Summary 550	
	Important Numbered Equations From This Chapter 550	
	Questions 551	
	Problems 551	
12.	CONTROL DEVICES AND CIRCUITS	554
	Objectives 554	
	Introduction 555	
	Relays, Contactors, and Motor Controllers 555	
	Pilot Devices 563	
	Control Methods and Ladder Diagrams 568	
	Reduced-Voltage AC Motor Starters 575	
	Reversible Starters 580	
	Starting DC Motors 581	
	Safety Controls 584	
	Troubleshooting 590	
	References 591	
	Questions 591	
	Problems 592	
13.	BUILDING ELECTRICAL SYSTEMS	596
	Objectives 596	

APPENDIX B: LIST OF SYMBOLS	710
APPENDIX A: NECTABLES	698
Problems 695	
Questions 694	
Summary 694	
Communications 690	
PLC Programming 663	
PLC Components 650	
Arithmetic Conversions 646	
PLC Overview 635	
Introduction 635	
Objectives 634	
PROGRAMMABLE LOGIC CONTROLLERS (PLCs)	634
Problems 632	
Questions 632	
Important Numbered Equations From This Chapter 6.	31
References 631	
Summary 630	
Earth Connections 627	
System Grounding 623	
Equipment Grounding 623	
Grounding 621	
Residential Electrical Systems 616	
Motor Circuit Design 612	
Motor Circuits 606	
Voltage Drop 605	
The National Electrical Code (NEC) 601
