

Professional

ADO.NET 2

Programming with SQL Server™
2005, Oracle®, and MySQL®

Wallace B. McClure, Gregory A. Beamer, John J. Croft IV, J. Ambrose Little, Bill Ryan,
Phil Winstanley, David Yack, Jeremy Zongker

Introduction	xxv
What This Book Is About	xxv
Who Should Buy This Book	xxv
How to Use This Book	xxvi
What This Book Covers	xxvi
Providing Feedback	xxvii
Chapter 1: History of Data Access	1
<hr/>	
The Early Days	2
CODASYL	2
IMS	3
Relational Databases	3
The Birth of Universal Data Access	4
ODBC	4
OLE-DB	5
Data Access Consumers	6
DAO	6
RDO	7
ADO	8
ADO.NET	10
ADO.NET 2.0	11
Summary	12
For More Information	12
Chapter 2: Standardized Database Objects and Design	13
<hr/>	
Creating Databases	13
Naming Conventions	15
Tables	15
Stored Procedures	17
Primary Keys	19
Foreign Keys	20
Indexes	22

Contents

Views	22
Help with Normalization	22
Enforcing Security	23
Creating Compiled Views of Data (Reports)	23
Normalizing	24
Why Normalize Data?	24
Types of Normalization	25
Designing a Normalized Database	26
Ensuring Quality Data	26
Making a Flat Database Normalized	28
A Black Cloud on the Horizon	30
Working with Someone Else's Database	30
Don't Make It Worse	31
Using Views for Database Abstraction	31
Using ADO.NET to Create a Normalized View of the Data	32
Building Strongly Typed Business Objects	33
Bringing Them Together	34
To Delete or Not to Delete . . .	35
Getting at the Data from Your Code	35
Summary	37
For More Information	37
Chapter 3: ADO.NET Essentials	39
Not Another ADO Release!	39
No Revolutions	40
Obsolete APIs	40
APIs in Their Twilight Months	41
The Generic Factory Model	42
Providers	43
ADO.NET to the Rescue	44
DbProviderFactories	46
Generic Factory versus Specific Providers	47
Pros	47
Cons	47
Writing a Helper Class	48
Data Sources	51
Connection Strings	53
Connection String Collection	54
Intelligent Connection Strings	54
Provider-Specific Connection Strings	55

Conditionally Adding Connection String Parameters	57
Provider-Specific Connection String Parameters	57
Connections	60
Opening a Connection (and Making Sure It's Open)	60
Closing a Connection (and Making Sure It's Closed)	61
Managing Exceptions	62
Provider-Specific Features	66
Schema Metadata	67
Available Information	68
Restrictions	73
Reserved Words	75
Source of the Schema Information	76
Uses for Schema Metadata	77
Commands	77
DbCommand from a Factory	77
DbCommand from a DbConnection	78
Provider-Specific Commands	78
QuotedIdentifier and UnquotedIdentifier	78
Adding DbParameters to a DbCommand	79
Parameters Are Not Generic	80
ExecuteNonQuery	81
ExecuteReader	81
ExecuteScalar	83
Output Parameters, Return Codes, Scalars, and DataReaders	84
DataSet	88
Manually Populating a DataSet	89
Using DataAdapters	89
Using DataReaders	90
DataTable	90
RowState	91
DataView	91
Serialization	92
DataTableReader	93
Streaming	93
Namespace Qualified Tables	94
Indexing Engine	94
DataSet, DataTable, DataReader, or an Object?	95
Showing Data to Users without Any Manipulation	95
Editing Data That Lives in One Table	95
Editing Data Spread across More Than One Table	95

Contents

Editing Continuously Updated Data for Which the Chance of Collisions Is High	96
Getting One Value from a Database	96
Summary	96
For More Information	96
Chapter 4: Standard Data Types	97
Data Types in SQL Server	98
CHAR (CHARACTER)	98
VARCHAR (CHAR VARYING or CHARACTER VARYING)	98
TEXT and VARCHAR(MAX)	99
National Character Storage	99
INT (INTEGER)	99
BIGINT	100
SMALLINT	100
TINYINT	100
DATETIME (TIMESTAMP)	100
SMALLDATETIME	100
REAL (FLOAT(24)) and FLOAT (FLOAT and DOUBLE PRECISION)	101
NUMERIC and DECIMAL (DEC and DEC(p,s))	101
MONEY and SMALLMONEY	102
BINARY, VARBINARY, IMAGE, and VARBINARY(MAX) (BINARY VARYING)	102
Using BINARY to Store Flags	103
BIT	107
TIMESTAMP	107
SQL_VARIANT	107
UNIQUEIDENTIFIER	108
XML	108
TABLE and CURSOR	108
Data Types in ADO.NET and .NET	109
SqlTypes	109
Other Alternatives	113
Mapping SQL Server Data Types to .NET	114
Summary	116
For More Information	116
Chapter 5: ADO.NET Integration with XML	117
What This Chapter Covers	118
Where XML Is Today	119
Data Exchange	119
XML Web Services	119

Configuration Files	120
Text Markup	120
Design Goals for System.Xml 2.0	120
XmlReader and XmlWriter	121
Factory Methods	121
Easier Object Serialization	122
Conversion between XML Types and Framework Types	123
Other XmlReader Enhancements	124
Designer Enhancements	124
XML Designer	124
XSL Debugging	125
XSD Enhancements	126
Security	127
XPathDocument	128
Editing	128
Validation	131
Change Notification	133
XSLT Improvements	134
Performance	134
Where XML Is Heading	135
XPath 2.0	135
XSLT 2.0 and XQuery	135
XML Views	136
ObjectSpaces	136
Summary	137
For More Information	137
Chapter 6: Transactions	139
Basic Concepts	139
A.C.I.D	140
Transaction Types	141
Isolation Levels	142
Creating a Local Transaction	143
Distributed Transactions	145
Distributed Transactions in ADO.NET 2.0	146
Monitoring Transactions and Their Performance	149
How Does This Affect Local Data?	150
Nested Transactions	153
Transactions in Web Services	155
Flow-Through Transactions	156

Contents

Getting System.Transactions to Work Correctly	156
Summary	157
For More Information	157
Chapter 7: Data Binding	159
Windows Forms versus Web Applications	159
The Concept of Data Binding	160
Options for Getting the Data	160
One-Way Binding versus Two-Way Binding	163
Data Binding in ASP.NET	163
Benefits of the Data Source Concept	164
Data Source Controls Provided with ASP.NET 2.0	164
Passing Parameters to Data Source Controls	165
Validation of Parameter Data	166
Data Source Caching	167
The ASP.NET UI Controls	169
SQLDataSource Control	170
Beware of Provider-Specific Syntax	175
ObjectDataSource Control	176
Table Adapter and Typed DataSets	185
Generating DataSource Controls	189
Windows Forms Applications	191
Where Did My Data Components Go?	192
Dragging and Dropping a Table	192
Data Sources	192
The Windows Form UI Controls	197
Summary	199
For More Information	199
Chapter 8: Building a Custom ADO.NET Data Provider	201
A Brief Overview	202
AdsConnection	203
AdsConnectionStringBuilder	209
AdsCommand	211
AdsDataReader	219
User Properties versus Active Directory Properties	221
Other AdsDataReader Members	226
AdsDataAdapter	228
AdsFactory	231

Getting Ready for Use	233
Summary	233
For More Information	234
Chapter 9: T-SQL Language and Enhancements	235
An In-Depth Look at T-SQL	238
Structured Exception Handling	240
OUTPUT	249
Top X	250
Common Table Expressions	252
PIVOT	254
UNPIVOT	256
Ranking	256
Summary	264
For More Information	264
Chapter 10: ADO.NET Programming with SQL Server from a Client Application	265
SQL Server and ADO.NET	265
Asynchronous Commands in ADO.NET	266
BeginExecuteNonQuery	267
BeginExecuteReader	269
BeginExecuteXMLReader	271
Asynchronous Operations in ASP.NET	272
IAsyncResult	275
Final Words of Warning with Asynchronous Operations	276
Multiple Active Result Sets	276
What Is MARS Useful For?	277
Technical Issues with MARS	277
Enumerating SQL Servers	278
Connection Pooling	279
Password Management	280
Building a SQL Connection with the SqlConnectionStringBuilder Class	281
SQL Server Types (SqlTypes)	283
Structures	284
Using SqlTypes	287
Using SqlDbType	290
Bulk Copy with SQL Server	291
Provider Statistics	292
SqlCacheDependency	293

Contents

SqlCacheDependencyAdmin	297
SqlDependency	297
Summary	300
For More Information	300
Chapter 11: SQL Server 2005 Server-Side Programming	301
Extended Stored Procedures	301
CLR Objects	302
Set-Based Programming	302
Procedural Programming	303
Using CLR Objects	303
Creating CLR Objects	304
SQL Server Projects	306
Assemblies and CLR Object Tables/Functions	310
Triggers	311
SqlTriggerContext	311
Updating Columns	313
EventData for DDL Triggers	313
Sample Code	314
Stored Procedures	318
Functions	319
User-Defined Types	324
User-Defined Sample Code	324
Manually Creating Tabular Results	326
SqlContext	327
The Context Connection	327
SQL CLR Architecture	328
Placing Business Logic	328
When to Use T-SQL and CLR Objects	329
SQL Server Management Objects	329
General Design	330
Referencing Objects through URN	331
Creating Objects	331
Creating a Database	332
Creating a Table, Its Columns, and an Index	334
Creating a User	336
Creating a Foreign Key	337
Creating a Backup	338
Scripting with SMO	341
XML Web Services Processing in the Database	343

Creating an Endpoint	344
Summary	346
For More Information	346
Chapter 12: Notification Services	347
<hr/>	
Major Components	348
Subscription Management Application	348
Event Provider	349
Generator	349
Distributor	350
Instances and Applications	350
Configuring the Instance	350
The Application Definition File	352
Adding the SQL NS Instance	356
Building the Subscription Management Application	357
Retrieving a List of Subscribers	357
Adding/Removing a Subscriber	358
Device List	360
Device Edit	361
Subscription List	363
Subscription Edit	364
Firing an Event	367
Summary	368
For More Information	368
Chapter 13: Service Broker	369
<hr/>	
An Introduction to Service Broker	369
Working with Service Broker: A Simple Example	371
Processing Messages	381
Technical Bits	394
Queues	394
Service Broker Catalog Views	396
Making It Easier	399
Summary	400
For More Information	401
Chapter 14: Full-Text Searching	403
<hr/>	
What Is Full-Text Searching?	403
Terminology	404

Contents

How Does Full-Text Indexing Work?	405
Microsoft Full-Text Engine for SQL Server Service	405
What Does a Full-Text Index Look Like?	405
How Is a Full-Text Index Populated?	406
Predicates, Programming, and the Results	412
Queries	412
Multi-Column Queries	418
Language Settings	418
Ranking	419
Searching XML and BLOBs	422
XML	422
BLOBs	422
Extending Full-Text Search with Filters	425
Summary	426
For More Information	426
Chapter 15: Reporting	427
An Introduction to Reporting	428
Scenario	428
Implementation	428
Web Application, or “Look Ma, No Code ...” (Part One)	430
Reporting Services	432
Our Simple Report in Reporting Services, or “Look Ma, no Code ...” (Part 2)	432
A Brief Primer on Report Definition Language	436
Using the Reporting Service Server	438
Building Report Models, or How to Slough Some of the Work off on the Biz Guys!	460
Summary	464
For More Information	465
Chapter 16: ADO.NET 2 and Open-Source Databases	465
Open Source and Licensing	465
Databases	466
MySQL	466
MaxDB (formerly SAPdb)	477
Firebird	485
Ingres	492
PostgreSQL	497
BerkeleyDB	502
SQLite	508
Summary	512
For More Information	513

Chapter 17: Oracle and ADO.NET	515
Choosing an Oracle Data Provider	515
Common Provider Classes	516
Microsoft Oracle Provider	517
Oracle Data Provider for .NET (ODP.NET)	518
Oracle Developer Tools for Visual Studio .NET	519
Common Oracle Errors	533
Using Tracing to Find Problems	534
Understanding Packages	535
Regular Expression Support	536
Database Change Notification	538
Using the BFile Type	543
Oracle Services for Microsoft Transaction Server	543
Oracle Database Extensions for .NET	544
Installation of the Database Extensions	544
Building a .NET Stored Procedure	544
Summary	548
For More Information	548
Appendix A: Constants/Enums in ADO.NET	549
Index	585
