

# **The Biology and Evolution of Trematodes**

An Essay on the Biology, Morphology,  
Life Cycles, Transmissions, and Evolution  
of Digenetic Trematodes

**Kirill V. Galaktionov and  
Andrej A. Dobrovolskij**

**Kluwer Academic Publishers**

## Table of Contents

|   |            |
|---|------------|
| Preface.....  | ix         |
| Introduction.....   | xi         |
| Acknowledgements.....   | xix        |
|   |            |
| <b>1. Organization of parthenogenetic and hermaphroditic generations of tremtodes.....</b>                  | <b>1</b>   |
| 1. Parthenogenetic generations and their larva.....   | 1          |
| 1.1 First parthenogenetic generation.....   | 2          |
| 1.2 The second (Daughter) parthenogenetic generation .....  | 52         |
| 1.3 Organization of the generative apparatus and early stages of development of sporocysts and rediae ..... | 75         |
| 2. The hermaphroditic generation .....  | 93         |
| 2.1 Cercaria.....   | 94         |
| 2.2 Metacercaria .....  | 151        |
| 2.3 Marita (adult).....   | 188        |
|   |            |
| <b>2. The trematode life cycle as a system of adaptations.....</b>  | <b>215</b> |
| 1. Adaptations of the first parthenogenetic generation.....   | 216        |
| 1.1 Adaptations of miracidia.....   | 216        |
| 1.2 Adaptations of the m.other sporocyst .....  | 244        |
| 2. Adaptations of daughter generations of parthenitae.....  | 253        |
| 2.1 Adaptations of daughter generations of parthenitae manifest at the individual level .....               | 253        |
| 2.2 Group Adaptations of daughter generations of parthenitae .....  | 258        |
| 3. Hermaphroditic generation.....   | 261        |
| 3.1 Adaptations of cercariae .....  | 261        |
| 3.2 Metacercaria .....  | 304        |
| 3.3 Marita (Adult).....   | 310        |

|  |     |
|--|-----|
| <b>3. The main types of trematode life cycles.....</b>   | 319 |
| 1. Trixenous (three-host) life cycles.....   | 323 |
| 2. Trixenous (three-host) life cycles with two endogenous<br>agglomerations .....                | 332 |
| 3. Dixenous (two-host) life cycles.....  | 334 |
| 3.1 Primary dixenous life cycles.....  | 335 |
| 3.2 Secondary dixenous life cycles.....  | 338 |
| 4. Homoxenous (one-host) life cycles.....  | 344 |
| 5. Tetraxenous (four-host) life cycles.....  | 346 |
| <b>4. Specific traits of populations formed by trematodes.....</b>                               | 349 |
| 1. On the nature of trematode populations .....  | 349 |
| 2. Host-parasite interactions and their manifestation on populational<br>level .....             | 354 |
| 3. Phase analysis of trematode populations .....   | 360 |
| 3.1 Hemipopulations of mother sporocyst larvae .....   | 360 |
| 3.2 Hemipopulations (Infrapopulations) of parthenogenetic<br>generations.....                    | 365 |
| 3.3 Hemipopulations of cercariae .....   | 384 |
| 3.4 Hemipopulations (Infrapopulations) of metacercariae .....                                    | 399 |
| 3.5 Hemipopulations (infrapopulations) of maritae.....   | 399 |
| 4. General notes .....   | 402 |
| <b>5. The main trends in trematode evolution .....</b>   | 407 |
| 1. The main trends of morphological evolution of trematodes.....                                 | 407 |
| 1.1 The parthenogenetic generations .....  | 408 |
| 1.2 The hermaphroditic generation.....   | 434 |
| 2. Ways of biological radiation of trematodes into different<br>ecosystems.....                  | 467 |
| 2.1 Ecological context of trematode life cycle formation.....                                    | 469 |
| 2.2 Expansion into the ecosystems of pelagic zone.....   | 471 |
| 2.3 Colonization of terrestrial and marine littoral ecosystems .....                             | 473 |
| 2.4 Patterns of strigeidiida and plagiorchidiida transmission .....                              | 477 |
| 2.5 Concluding Remarks .....   | 478 |
| <b>6. Evolution of life cycles and phylogeny of trematodes.....</b>                              | 481 |
| 1. Origin and evolution of trematode life cycles .....   | 482 |
| 1.1 Approaches to the analysis of the nature and evolution of the<br>trematode life cycles ..... | 482 |
| 1.2 Main stages in the evolution of trematode life cycles .....                                  | 491 |

*Table of Contents*

vii

|  |     |
|--|-----|
| 2. The main trends in evolution of trematode life cycles .....                         | 498 |
| 3. Possible approaches to establishing a natural classification of<br>trematodes ..... | 506 |
| References .....   | 529 |
| Index .....  | 575 |
