

PREFACE	xiii
CHAPTER 1	A Brief History of Animals.....1
	Animal Origins and the Fossil Record.....2
	The Animal Tree.....6
	General Features of Animal Design and Diversity.....8
	Evolution and Development: DNA and Diversity.....13
	Selected Readings.....13
CHAPTER 2	The Genetic Toolkit for Development.....15
	Before the Toolkit—Organizers, Fields, and Morphogens.....15
	The Genetic Toolkit.....18
	The <i>Drosophila</i> Toolkit.....19
	<i>Classifying genes according to their developmental function</i>19
	<i>Homeotic genes and segmental identity</i>19
	<i>The homeobox</i>26
	<i>Field-specific selector genes</i>26
	<i>Compartment selector genes</i>28
	<i>Cell-type-specific selector genes</i>31
	Formation of the body axes.....32
	<i>Systematic searches for developmental genes in Drosophila</i>32
	<i>The anteroposterior axis</i>33
	<i>The dorsoventral axis</i>35
	<i>Expression of toolkit genes</i>35
	<i>Toolkit gene products: transcription factors and signaling</i>
	<i>pathway components</i>36
	<i>Pleiotropy of toolkit genes</i>39
	Sharing of the Genetic Toolkit Among Animals.....43
	<i>Hox genes</i>43
	<i>Field- and cell-type-specific selector genes</i>44
	Signaling pathways: classical organizers and morphogens.....46
	The Toolkit and Animal Design.....47
	Selected Readings.....48
CHAPTER 3	Building Animals.....51
	Gene Regulation in Metazoans.....51
	The Architecture of Genetic Regulatory Hierarchies.....53
	General features and approach.....53
	Regulatory logic—pathways, circuits, batteries, feedback loops, networks, and the connectivity of genes.....55

Model regulatory hierarchies and the key genetic switches that operate them.....	57
The Insect Body Plan	57
From egg to segments: the anteroposterior coordinate system	58
<i>Generation of maternal transcription factor gradients</i>	60
<i>Transcriptional activation of and cross-regulation by gap genes</i>	60
<i>Initiation of periodic pair-rule gene expression</i>	61
<i>Regulation of segment polarity genes by pair-rule proteins</i>	62
General lessons from the segmentation genes.....	62
The dorsoventral axis coordinate system	65
The <i>Hox</i> ground plan	65
Secondary fields: integrating the anteroposterior and dorsoventral coordinate systems.....	68
<i>The limb fields</i>	69
<i>The wing primordia</i>	69
<i>The salivary gland</i>	69
<i>Neural and muscle precursors</i>	70
Patterning within secondary fields: organizing signals and selector genes.....	71
<i>The anteroposterior coordinate system</i>	72
<i>The dorsoventral coordinate system</i>	72
<i>Signal integration by the vestigial field-specific selector gene</i>	72
Combinatorial regulation of wing patterning by signaling proteins and the <i>Vg/Sd</i> selector proteins.....	74
<i>The response to organizing signals</i>	74
<i>The action of the <i>Vg/Sd</i> selector genes</i>	74
The modification of regulatory hierarchies in secondary fields by <i>Hox</i> genes.....	75
The Vertebrate Body Plan	77
The anteroposterior axis: somite formation and segmentation.....	77
The vertebrate <i>Hox</i> ground plan.....	80
Vertebrate limb development.....	82
Positioning of the limb buds along the rostrocaudal axis.....	84
Outgrowth of the limb bud: dorsoventral and anteroposterior regulatory hierarchies.....	84
Integration of organizing signals to form the proximodistal axis and deployment of <i>Hox</i> genes in the limb field.....	87
Regulatory networks controlling the differentiation of major limb pattern elements.....	89
The regulation of forelimb and hindlimb identity by selector genes	89
Review: The General Logic and Mechanisms Controlling Gene Expression in Cellular Fields.....	90
Selected Readings	92

CHAPTER 4	Evolution of the Toolkit	97
	The History of Gene Families	98
	Conservation of developmental regulatory genes: phylogenetic inferences about animal ancestors.....	98
	Gene duplication.....	101
	Mapping gene duplication events onto an animal phylogeny.....	104
	Gene divergence.....	105
	Assembly of the toolkit: the first animals	105
	Case Study: Evolution of the <i>Hox</i> Complex.....	108
	Expansion of the <i>Hox</i> complex.....	108
	The <i>ParaHox</i> genes: a sister complex to the <i>Hox</i> genes.....	110
	New functions for some insect <i>Hox</i> genes	111
	Interpreting the Toolkit: Inferences About Animal Evolution.....	112
	Expansion of the toolkit and the evolution of morphological complexity.....	112
	Conserved genes, conserved biochemical functions	113
	Conserved developmental functions: rebuilding the bilaterian ancestor from phylogenetic inference	114
	The Toolkit as Developmental Potential	117
	Selected Readings	119
CHAPTER 5	Diversification of Body Plans and Body Parts	123
	Diversity of Anterior/Posterior Body Organization within	
	Arthropods and Vertebrates.....	124
	Evolution of the genetic control of segmentation in arthropods	125
	Shifts in trunk <i>Hox</i> gene expression that mirror changes in arthropod body architecture	127
	<i>Hox</i> genes and the evolution of arthropod heads	130
	Annelid <i>Hox</i> expression patterns.....	131
	Correlation of vertebrate axial patterning with <i>Hox</i> expression domains	131
	How do <i>Hox</i> domains shift during evolution?	133
	Morphological Diversity Within a Conserved Body Plan	135
	Evolution of the limbless insect abdomen	135
	Evolution of insect wing number.....	136
	Diversification of insect wing morphology	139
	Modulations in <i>Hox</i> expression patterns within fields that contribute to insect diversity	140
	Vertebrate limb diversity: regulatory changes downstream of other selector genes.....	142
	Regulatory Evolution and the Diversification of Homologous Body Parts	145
	Selected Readings	146

CHAPTER 6	The Evolution of Morphological Novelties	149
	What Is Morphological Novelty?	150
	Novel Functions from Older Morphological Structures	150
	Epithelial appendages: scales, feathers, and hair	150
	The evolution of insect wings from dorsal leg structures	152
	Butterfly wing color scales: an evolutionary canvas	154
	Evolution of the butterfly eyespot	155
	The Evolution of Vertebrate Novelties	159
	Fins to limbs: paired appendages and the tetrapod hand	159
	Evolution of the neural crest and the vertebrate brain	161
	Evolution of the notochord	163
	Evolution of Radical Body Plan Changes	163
	Loss of the ascidian tail: a chordate lacking chordate features	163
	Limless tetrapods, or how the snake lost its legs	165
	Evolution of the echinoderm body plan	166
	Regulatory Evolution and the Origin of Novelties	167
	Selected Readings	169
CHAPTER 7	From DNA to Diversity: The Primacy of Regulatory Evolution ...	173
	Why Is Regulatory Evolution a Primary Force in Morphological	
	Evolution?	173
	The Function and Evolution of <i>Cis</i> -Regulatory DNA	175
	Functions of <i>cis</i> -regulatory elements	175
	Evolution of <i>cis</i> -regulatory elements	175
	<i>De novo</i> evolution of <i>cis</i> -regulatory elements from preexisting	
	nonfunctional DNA sequences	176
	Evolution of <i>cis</i> -regulatory elements from existing elements	180
	The evolution of gene repression versus gene activation	181
	Case studies in <i>cis</i> -regulatory evolution	182
	<i>Conservation of functional elements among widely</i>	
	<i>divergent taxa</i>	182
	<i>The dynamics of sequence turnover in cis-regulatory DNA</i>	183
	<i>Functional modification of cis-regulatory DNA sequences</i>	186
	The Role of <i>Cis</i> -Regulatory DNA in Morphological Variation and	
	the Response to Selection	186
	Cryptic genetic variation and the potential for morphological	
	evolution	188
	The Evolution of Regulatory DNA and Morphological Diversity	190
	Extrapolating from bristles to body plans	190
	Selected Readings	194
GLOSSARY		197
