

ENVIRONMENTAL MOLECULAR MICROBIOLOGY: Protocols and Applications

Edited by
Paul A. Rochelle

Contents

List of Contributors	vii
1. Environmental Molecular Microbiology: Introduction <i>Paul A. Rochelle</i>	1
2. Extraction of Nucleic Acids from Environmental Samples <i>Yu-Li Tsai and Paul A. Rochelle</i>	15
3. The Polymerase Chain Reaction as a Tool to Investigate Microbial Diversity in Environmental Samples <i>Philip Hugenholtz and Brett M. Goebel</i>	31
4. Primer Design for PCR Amplification of Environmental DNA Targets <i>Julian R. Marchesi</i>	43
5. Direct Detection of Mycobacteria in the Environment with Sequence Capture PCR <i>Timothy P. Stinear, Paul D. R. Johnson, and John K. Davies</i>	55
6. Protocols for Nucleic Acid-based Detection and Quantitation of Microorganisms in Water <i>Knut Rudi and Kjetill S. Jakobsen</i>	63
7. Genomic Polymorphisms and the Diversity of Oxygenic Phototrophs <i>Brett A. Neilan</i>	75
8. Detection of Protozoa in Environmental Water Samples <i>Paul A. Rochelle</i>	91
9. Quantitative Polymerase Chain Reaction Assay <i>Clifford F. Brunk and Jinliang Li</i>	115
10. Microbial Community Proteomics <i>Oladele A. Ogunseitan, James LeBlanc, and Enrique A. Dalmasso</i>	125
11. A Combined Phospholipid and 16S rDNA PCR-DGGE Analysis to Study Bioremediative Microbial Communities <i>In-Situ</i> <i>Sarah J. Macnaughton and John R. Stephen</i>	141
12. Single-Strand Conformation Polymorphism (SSCP) for Microbial Community Analysis <i>Christoph C. Tebbe, Achim Schmalenberger, Sabine Peters, and Frank Schwieger</i>	161
