

Building .NET Applications

4th Edition
Covers C# 2.0, .NET 2.0
& Visual Studio 2005

Programming

C#

O'REILLY®

Table of Contents

Preface	xi
----------------------	-----------

Part I. The C# Language

1. C# and the .NET Framework	3
The .NET Platform	3
The .NET Framework	4
Compilation and the MSIL	6
The C# Language	7
2. Getting Started: “Hello World”	9
Classes, Objects, and Types	9
Developing “Hello World”	16
Using the Visual Studio .NET Debugger	21
3. C# Language Fundamentals	24
Types	24
Variables and Constants	29
Expressions	37
Whitespace	37
Statements	38
Operators	54
Preprocessor Directives	63
4. Classes and Objects	67
Defining Classes	68
Creating Objects	73

Using Static Members	80
Destroying Objects	85
Passing Parameters	88
Overloading Methods and Constructors	94
Encapsulating Data with Properties	97
readonly Fields	101
5. Inheritance and Polymorphism	104
Specialization and Generalization	104
Inheritance	107
Polymorphism	107
Abstract Classes	115
The Root of All Classes: Object	119
Boxing and Unboxing Types	121
Nesting Classes	124
6. Operator Overloading	127
Using the operator Keyword	127
Supporting Other .NET Languages	128
Creating Useful Operators	128
Logical Pairs	129
The Equality Operator	129
Conversion Operators	130
7. Structs	136
Defining Structs	136
Creating Structs	139
8. Interfaces	144
Defining and Implementing an Interface	145
Accessing Interface Methods	154
Overriding Interface Implementations	162
Explicit Interface Implementation	166
9. Arrays, Indexers, and Collections	176
Arrays	176
The foreach Statement	181
Indexers	197
Collection Interfaces	206

Constraints	210
List<T>	215
Queues	226
Stacks	229
Dictionaries	232
10. Strings and Regular Expressions	235
Strings	236
Regular Expressions	251
11. Handling Exceptions	263
Throwing and Catching Exceptions	264
Exception Objects	274
Custom Exceptions	278
Rethrowing Exceptions	280
12. Delegates and Events	286
Delegates	287
Multicasting	298
Events	302
Using Anonymous Methods	315
Retrieving Values from Multicast Delegates	316

Part II. Programming with C#

13. Building Windows Applications	327
Creating a Simple Windows Form	328
Creating a Windows Forms Application	332
XML Documentation Comments	357
14. Accessing Data with ADO.NET	360
Relational Databases and SQL	360
The ADO.NET Object Model	364
Getting Started with ADO.NET	366
Using OLE DB Managed Providers	369
Working with Data-Bound Controls	371

15. Programming ASP.NET Applications and Web Services	380
Understanding Web Forms	381
Creating a Web Form	385
Adding Controls	389
Data Binding	391
Web Services	401
SOAP, WSDL, and Discovery	402
Building a Web Service	403
Creating the Proxy	407
16. Putting It All Together	414
The Overall Design	414
Creating the Web Services Client	414
Displaying the Output	424
Searching by Category	433

Part III. The CLR and the .NET Framework

17. Assemblies and Versioning	441
PE Files	441
Metadata	441
Security Boundary	442
Manifests	442
Multimodule Assemblies	443
Private Assemblies	451
Shared Assemblies	452
18. Attributes and Reflection	459
Attributes	459
Reflection	466
19. Marshaling and Remoting	478
Application Domains	479
Context	489
Remoting	491

20. Threads and Synchronization	503
Threads	504
Synchronization	513
Race Conditions and Deadlocks	523
21. Streams	525
Files and Directories	526
Reading and Writing Data	537
Asynchronous I/O	544
Network I/O	549
Web Streams	569
Serialization	572
Isolated Storage	581
22. Programming .NET and COM	585
Importing ActiveX Controls	585
Importing COM Components	593
Exporting .NET Components	602
P/Invoke	604
Pointers	608
Appendix: C# Keywords	613
Index	619
