

PORO MECHANICS

OLIVIER COUSSY

 WILEY

Contents

Preface	xi
Acknowledgements	xiii
1 Deformation and Kinematics. Mass Balance	1
1.1 The Porous Medium and the Continuum Approach	1
1.1.1 Connected and Occluded Porosity. The Matrix	1
1.1.2 Skeleton and Fluid Particles. Continuity Hypothesis	2
1.2 The Skeleton Deformation	2
1.2.1 Deformation Gradient and Transport Formulae	2
1.2.2 Eulerian and Lagrangian Porosities. Void Ratio	5
1.2.3 Strain Tensor	6
1.2.4 Infinitesimal Transformation and the Linearized Strain Tensor	7
1.3 Kinematics	8
1.3.1 Particle Derivative	8
1.3.2 Strain Rates	10
1.4 Mass Balance	12
1.4.1 Equation of Continuity	12
1.4.2 The Relative Flow Vector of a Fluid Mass. Filtration Vector. Fluid Mass Content	12
1.5 Advanced Analysis	14
1.5.1 Particle Derivative with a Surface of Discontinuity	14
1.5.2 Mass Balance with a Surface of Discontinuity. The Rankine–Hugoniot Jump Condition	15
1.5.3 Mass Balance and the Double Porosity Network	17
2 Momentum Balance. Stress Tensor	19
2.1 Momentum Balance	19
2.1.1 The Hypothesis of Local Forces	19
2.1.2 The Momentum Balance	20
2.1.3 The Dynamic Theorem	21
2.2 The Stress Tensor	21
2.2.1 Action–Reaction Law	21
2.2.2 The Tetrahedron Lemma and the Cauchy Stress Tensor	22

2.3	Equation of Motion	24
2.3.1	The Local Dynamic Resultant Theorem	24
2.3.2	The Dynamic Moment Theorem and the Symmetry of the Stress Tensor	25
2.3.3	Partial Stress Tensor	26
2.4	Kinetic Energy Theorem	27
2.4.1	Strain Work Rates	27
2.4.2	Piola–Kirchhoff Stress Tensor	29
2.4.3	Kinetic Energy Theorem	29
2.5	Advanced Analysis	30
2.5.1	The Stress Partition Theorem	30
2.5.2	Momentum Balance and the Double Porosity Network	32
2.5.3	The Tortuosity Effect	34
3	Thermodynamics	37
3.1	Thermostatrics of Homogeneous Fluids	37
3.1.1	Energy Conservation and Entropy Balance	37
3.1.2	Fluid State Equations. Gibbs Potential	39
3.2	Thermodynamics of Porous Continua	40
3.2.1	Postulate of Local State	40
3.2.2	The First Law	40
3.2.3	The Second Law	42
3.3	Conduction Laws	45
3.3.1	Darcy’s Law	45
3.3.2	Fourier’s Law	49
3.4	Constitutive Equations of the Skeleton	51
3.4.1	State Equations of the Skeleton	51
3.4.2	Complementary Evolution Laws	54
3.5	Recapitulating the Laws	57
3.6	Advanced Analysis	59
3.6.1	Fluid Particle Head. Bernoulli Theorem	59
3.6.2	Thermodynamics and the Double Porosity Network	60
3.6.3	Chemically Active Porous Continua	61
4	Thermoporoelasticity	71
4.1	Non-linear Thermoporoelastic Skeleton	71
4.1.1	Infinitesimal Transformation and State Equations	71
4.1.2	Tangent Thermoporoelastic Properties	73
4.1.3	The Incompressible Matrix and the Effective Stress	74
4.2	Linear Thermoporoelastic Skeleton	75
4.2.1	Linear Thermoporoelasticity	75
4.2.2	Isotropic Linear Thermoporoelasticity	75
4.2.3	Relations Between Skeleton and Matrix Properties	78
4.2.4	Anisotropic Poroelasticity	81
4.3	Thermoporoelastic Porous Material	84
4.3.1	Constitutive Equations of the Saturating Fluid	84
4.3.2	Constitutive Equations of the Porous Material	84

4.4	Advanced Analysis	87
4.4.1	Non-linear Isotropic Poroelasticity	87
4.4.2	Brittle Fracture of Fluid-infiltrated Materials	93
4.4.3	From Poroelasticity to the Swelling of Colloidal Mixtures	98
4.4.4	From Poroelasticity to Chemoelasticity and Ageing Materials	108
5	Problems of Poroelasticity	113
5.1	Linearized Poroelasticity Problems	113
5.1.1	The Hypothesis of Small Perturbations	113
5.1.2	Field Equations and Boundary Conditions	115
5.1.3	The Diffusion Equation	116
5.2	Solved Problems of Poroelasticity	117
5.2.1	Injection of a Fluid	117
5.2.2	Consolidation of a Soil Layer	125
5.2.3	Drilling of a Borehole	129
5.3	Thermoporoelasticity Problems	133
5.3.1	Field Equations	133
5.3.2	Half-space Subjected to a Change in Temperature	135
5.4	Advanced Analysis	137
5.4.1	Uniqueness of Solution	137
5.4.2	The Beltrami–Michell Equations	140
5.4.3	Mandel’s Problem	142
5.4.4	Non-linear Sedimentation	145
6	Unsaturated Thermoporoelasticity	151
6.1	Mass and Momentum Balance	151
6.1.1	Partial Porosities and Degree of Saturation	151
6.1.2	Mass and Momentum Balance	152
6.1.3	Mass and Momentum Balance with Phase Change	152
6.2	Thermodynamics	153
6.2.1	Energy and Entropy Balance for the Porous Material	153
6.2.2	Skeleton State Equations. Averaged Fluid Pressure and Capillary Pressure	154
6.2.3	Thermodynamics of Porous Media with Phase Change	156
6.3	Capillary Pressure Curve	157
6.3.1	Energy Approach to the Capillary Pressure Curve	157
6.3.2	Capillary Pressure, Natural Imbibition and Isotherm of Sorption	160
6.4	Unsaturated Thermoporoelastic Constitutive Equations	162
6.4.1	Energy Separation and the Equivalent Pore Pressure Concept	162
6.4.2	Equivalent Pore Pressure and Averaged Fluid Pressure	163
6.4.3	Equivalent Pore Pressure and Thermoporoelastic Constitutive Equations	164
6.4.4	Equivalent Pore Pressure, Wetting and Free Swelling of Materials	165
6.5	Heat and Mass Conduction	167
6.5.1	Fourier’s Law, Thermal Equation and Phase Change	167
6.5.2	Darcy’s Law	168
6.5.3	Fick’s Law	168

6.6	Advanced Analysis	171
6.6.1	The Stress Partition Theorem in the Unsaturated Case	171
6.6.2	Capillary Hysteresis. Porosimetry	174
6.6.3	Capillary Pressure Curve, Deformation and Equivalent Pore Pressure	178
6.6.4	Isothermal Drying of Weakly Permeable Materials	180
7	Penetration Fronts	189
7.1	Dissolution Fronts	189
7.1.1	Mass Balance and Fick's Law for the Solute	190
7.1.2	Instantaneous Dissolution and the Formation of a Penetration Front	191
7.1.3	Stefan-like Problem	192
7.2	Solute Penetration with Non-linear Binding	194
7.2.1	The Binding Process and the Formation of a Penetration Front	194
7.2.2	The Time Lag and the Diffusion Test	197
7.3	Ionic Migration with Non-linear Binding	200
7.3.1	Ionic Migration in the Advection Approximation	200
7.3.2	The Travelling Wave Solution	202
7.3.3	The Time Lag and the Migration Test	205
7.4	Advanced Analysis	209
7.4.1	Stefan-like Problem with Non-instantaneous Dissolution	209
7.4.2	Imbibition Front	212
7.4.3	Surfaces of Discontinuity and Wave Propagation	218
8	Poroplasticity	225
8.1	Poroplastic Behaviour	225
8.1.1	Plastic Strain and Plastic Porosity	225
8.1.2	Poroplastic State Equations for the Skeleton	226
8.1.3	Poroplastic State Equations for the Porous Material	227
8.1.4	Domain of Poroelasticity and the Loading Function. Ideal and Hardening Poroplastic Material	229
8.2	Ideal Poroplasticity	230
8.2.1	The Flow Rule and the Plastic Work	230
8.2.2	Principle of Maximal Plastic Work and the Flow Rule. Standard and Non-standard Materials	231
8.3	Hardening Poroplasticity	233
8.3.1	Hardening Variables and Trapped Energy	233
8.3.2	Flow Rule for the Hardening Material. Hardening Modulus	234
8.4	Usual Models of Poroplasticity	237
8.4.1	Poroplastic Effective Stress	237
8.4.2	Isotropic and Kinematic Hardening	237
8.4.3	The Usual Cohesive-Frictional Poroplastic Model	238
8.4.4	The Cam-Clay Model	244
8.5	Advanced Analysis	248
8.5.1	Uniqueness of Solution	248
8.5.2	Limit Analysis	250

8.5.3	Thermal and Chemical Hardening	252
8.5.4	Localization of Deformation	256
9	Poroviscoelasticity	261
9.1	Poroviscoelastic Behaviour	261
9.1.1	Viscous Strain and Viscous Porosity	261
9.1.2	Poroviscoelastic State Equations for the Skeleton	262
9.1.3	Complementary Evolution Laws	263
9.2	Functional Approach to Linear Poroviscoelasticity	263
9.2.1	Creep Test. Instantaneous and Relaxed Properties. The Trapped Energy	263
9.2.2	Creep and Relaxation Functions	265
9.2.3	Poroviscoelastic Properties and Constituent Properties	268
9.3	Primary and Secondary Consolidation	269
9.4	Advanced Analysis	272
9.4.1	Poroviscoplasticity	272
9.4.2	Functional Approach to the Thermodynamics of Poroviscoelasticity	274
A	Differential Operators	279
A.1	Orthonormal Cartesian Coordinates	279
A.2	Cylindrical Coordinates	280
A.3	Spherical Coordinates	281
	Bibliography	285
	Index	293
