

The Future of Theoretical Physics and Cosmology

Celebrating Stephen Hawking's 60th Birthday

Edited by **G. W. Gibbons**

E. P. S. Shellard and

S. J. Rankin

CAMBRIDGE

Contents

List of contributors	xvii
Preface	xxv
1 Introduction	
<i>Gary Gibbons and Paul Shellard</i>	1
1.1 Popular symposium	2
1.2 Spacetime singularities	3
1.3 Black holes	4
1.4 Hawking radiation	5
1.5 Quantum gravity	6
1.6 M theory and beyond	7
1.7 De Sitter space	8
1.8 Quantum cosmology	9
1.9 Cosmology	9
1.10 Postscript	10
 Part 1 Popular symposium	 15
2 Our complex cosmos and its future	
<i>Martin Rees</i>	17
2.1 Introduction	17
2.2 The universe observed	17
2.3 Cosmic microwave background radiation	22
2.4 The origin of large-scale structure	24
2.5 The fate of the universe	26
2.6 The very early universe	30

2.7	Multiverse?	35
2.8	The future of cosmology	36
3	Theories of everything and Hawking's wave function of the universe	
	<i>James Hartle</i>	38
3.1	Introduction	38
3.2	Different things fall with the same acceleration in a gravitational field	38
3.3	The fundamental laws of physics	40
3.4	Quantum mechanics	45
3.5	A theory of everything is not a theory of everything	46
3.6	Reduction	48
3.7	The main points again	49
	<i>References</i>	49
4	The problem of spacetime singularities: implications for quantum gravity?	
	<i>Roger Penrose</i>	51
4.1	Introduction	51
4.2	Why quantum gravity?	51
4.3	The importance of singularities	54
4.4	Entropy	58
4.5	Hawking radiation and information loss	61
4.6	The measurement paradox	63
4.7	Testing quantum gravity?	70
	<i>Useful references for further reading</i>	73
5	Warping spacetime	
	<i>Kip Thorne</i>	74
5.1	Introduction	74
5.2	A first glimpse of the Golden Age: 1964–74	80
5.3	LISA: mapping black holes with gravitational waves	81
5.4	The Golden Age again: colliding black holes	87
5.5	LIGO/VIRGO/GEO: probing colliding black holes with gravitational waves	89
5.6	Quantum behavior of human-sized objects	92
5.7	Probing the big bang with gravitational waves	94
5.8	Cosmic censorship: betting with Stephen	96
5.9	Time travel	100
	<i>Useful references for further reading</i>	103

6	Sixty years in a nutshell	
	<i>Stephen Hawking</i>	105
6.1	Introduction	105
6.2	How it began	105
6.3	General relativity and cosmology	106
6.4	Mach's principle and Wheeler–Feynman electrodynamics	107
6.5	The steady state	109
6.6	Gravity and the expanding universe	110
6.7	Collapsing stars	111
6.8	Hawking radiation	112
6.9	Inflation	114
6.10	M theory and the future	115
6.11	Conclusion	117
	 Part 2 Spacetime singularities	 119
7	Cosmological perturbations and singularities	
	<i>George Ellis</i>	121
7.1	Introduction	121
	Part A: Cosmological perturbations	122
7.2	Fluids and scalar fields	122
7.3	Cosmic background radiation	130
7.4	Issues	135
	Part B: Cosmological singularities	138
7.5	Analytic direct approach	139
7.6	Indirect method	141
7.7	Issues	143
7.8	Conclusion	153
	<i>References</i>	153
8	The quantum physics of chronology protection	
	<i>Matt Visser</i>	161
8.1	Why is chronology protection even an issue?	161
8.2	Paradoxes and responses	163
8.3	Elements of chronology protection	165
8.4	Semiclassical arguments	167
8.5	The failure of semiclassical gravity	169
8.6	Where we stand	171
	<i>References</i>	173
9	Energy dominance and the Hawking–Ellis vacuum	

	conservation theorem	
	<i>Brandon Carter</i>	177
9.1	Introduction	177
9.2	The energy dominance condition	179
9.3	The vacuum conservation theorem	181
	<i>References</i>	183
10	On the instability of extra space dimensions	
	<i>Roger Penrose</i>	185
10.1	The issue of functional freedom	185
10.2	Functional freedom in higher-dimensional theories	189
10.3	Classical instability of extra dimensions	195
10.4	The holographic conjecture	198
	<i>References</i>	200
	Part 3 Black holes	203
11	Black hole uniqueness and the inner horizon stability problem	
	<i>Werner Israel</i>	205
11.1	Introduction	205
11.2	The trailblazers: Moscow 1964	206
11.3	Cambridge 1965–71	207
11.4	Descent into the interior	209
11.5	Internal evolution problem	210
11.6	Spherical models	212
11.7	The generic case	214
11.8	Conclusions	215
11.9	Acknowledgements	215
	<i>References</i>	215
12	Black holes in the real universe and their prospects as probes of relativistic gravity	
	<i>Martin Rees</i>	217
12.1	Introduction	217
12.2	Stellar mass holes	218
12.3	Supermassive holes	219
12.4	Scenarios for black hole formation	220
12.5	The galactic context	222
12.6	Do the candidate holes obey the Kerr metric?	224
12.7	Gravitational radiation as a probe	230

<i>References</i>	233
13 Primordial black holes	
<i>Bernard Carr</i>	236
13.1 Preface	236
13.2 Historical overview	237
13.3 PBHs as a probe of primordial inhomogeneities	240
13.4 PBHs as a probe of cosmological phase transitions	243
13.5 PBHs as a probe of a varying gravitational constant	247
13.6 PBHs as a probe of gravitational collapse	248
13.7 PBHs as a probe of high energy physics	250
13.8 Postscript	256
<i>References</i>	259
14 Black hole pair creation	
<i>Simon Ross</i>	264
14.1 Introduction	264
14.2 Constructing instantons: the C metric	266
14.3 Calculation of the action	268
14.4 Pair creation rate	272
<i>References</i>	275
15 Black holes at accelerators	
<i>Steve Giddings</i>	278
15.1 Introduction	278
15.2 TeV-scale gravity	279
15.3 Black holes on brane worlds	281
15.4 Black hole decay and signatures	284
15.5 The future of high energy physics	286
<i>References</i>	287
Part 4 Hawking radiation	289
16 Black holes and string theory	
<i>Malcolm Perry</i>	291
<i>References</i>	300
17 M theory and black hole quantum mechanics	
<i>Joe Polchinski</i>	302
17.1 A story	302
17.2 'Finding Stephen's mistake'	303
17.3 The strong interaction and black holes	307

	<i>References</i>	308
18	Playing with black strings	
	<i>Gary Horowitz</i>	310
18.1	Introduction	310
18.2	Existence of new (vacuum) solutions	312
18.3	Properties of the new solutions	316
18.4	New charged black strings	319
18.5	Open questions	324
18.6	Conclusions	327
	<i>References</i>	328
19	Twenty years of debate with Stephen	
	<i>Leonard Susskind</i>	330
19.1	Crisis and paradigm shift	330
19.2	Stephen's argument for coherence loss	331
19.3	Horizon Complementarity	333
19.4	The Holographic Principle	334
19.5	The ultraviolet/infrared connection	335
19.6	Counting black hole microstates	337
19.7	De Sitter space	339
19.8	Correlations in finite entropy systems	343
	<i>References</i>	345
	Part 5 Quantum gravity	349
20	Euclidean quantum gravity: the view from 2002	
	<i>Gary Gibbons</i>	351
20.1	Introduction	351
20.2	Some historical recollections	354
20.3	The path integral	357
20.4	The AdS/CFT correspondence	365
20.5	The volume canonical ensemble	366
20.6	Hyperbolic 4-manifolds	368
20.7	Action and complexity	369
20.8	Euclides ab omni naevo vindicatus?	370
	<i>References</i>	370
21	Zeta functions, anomalies and stable branes	
	<i>Ian Moss</i>	373
21.1	Introduction	373

21.2	ζ -functions	374
21.3	Heat kernel coefficients	375
21.4	Anomalies	377
21.5	Brane worlds	378
21.6	Outlook	381
	<i>References</i>	382
22	Some reflections on the status of conventional quantum theory when applied to quantum gravity	
	<i>Chris Isham</i>	384
22.1	Introduction	384
22.2	The danger of a priori assumptions	386
22.3	Alternative conceptions of spacetime	393
22.4	Presheaves and related notions from topos theory	396
22.5	Presheaves of propositions, and valuations in quantum theory	401
22.6	Conclusions	405
	<i>References</i>	406
23	Quantum geometry and its ramifications	
	<i>Abhay Ashtekar</i>	409
23.1	Introduction	409
23.2	A bird's eye view of loop quantum gravity	411
23.3	Applications of quantum geometry	420
23.4	Outlook	428
	<i>References</i>	431
24	Topology change in quantum gravity	
	<i>Fay Dowker</i>	436
24.1	Introduction	436
24.2	A top down framework for topology change	437
24.3	Morse metrics and elementary topology changes	439
24.4	Good and bad topology change	441
24.5	Progress on the Borde–Sorkin conjecture	443
24.6	Looking to the future	445
	<i>References</i>	449
	Part 6 M theory and beyond	453
25	The past and future of string theory	
	<i>Edward Witten</i>	455
26	String theory	

	<i>David Gross</i>	463
26.1	Motivations for quantum gravity	463
26.2	The achievements of string theory	466
26.3	The future of string theory	470
27	A brief description of string theory	
	<i>Michael Green</i>	473
27.1	Introduction	473
27.2	Historical background	474
27.3	String theory today	477
27.4	Duality and M theory	481
27.5	Future perspective	482
28	The story of M	
	<i>Paul Townsend</i>	484
28.1	Introduction	484
28.2	The supermembrane	485
28.3	Backgrounds of reduced holonomy	488
28.4	The sigma model limit	490
	<i>References</i>	492
29	Gauged supergravity and holographic field theory	
	<i>Nick Warner</i>	494
29.1	Gauged supergravity and a thesis project	494
29.2	The ups and downs of maximal gauged supergravity	496
29.3	Exploring higher dimensions	498
29.4	Holographic field theory and AdS/CFT correspondence	501
29.5	Bulk gravity and brane renormalization: where are the branes?	503
29.6	Holographic renormalization group flows: an example	506
29.7	Final comments	511
	<i>References</i>	512
30	57 Varieties in a NUTshell	
	<i>Chris Pope</i>	515
30.1	Introduction	515
30.2	Four-dimensional self-dual metrics	516
30.3	Non-compact self-dual 4-metrics	517
30.4	Compact self-dual 4-metrics: K3	521
30.5	Special holonomy in higher dimensions	524
30.6	Ricci-flat Kähler 6-metrics and the conifold	525
30.7	Seven-dimensional metrics of G_2 holonomy	528

30.8	Spin(7) holonomy	532
30.9	Conclusion	533
	<i>References</i>	534

Part 7 De Sitter space **537**

31	Adventures in de Sitter space	
	<i>Raphael Bousso</i>	539
31.1	Introduction	539
31.2	De Sitter space	541
31.3	Entropy and temperature of event horizons	543
31.4	Entropy bounds from horizons	545
31.5	Absolute entropy bounds in spacetimes with $\Lambda > 0$	548
31.6	Quantum gravity in de Sitter space	555
31.7	Instabilities of the Nariai solution	559
32	De Sitter space in non-critical string theory	
	<i>Andrew Strominger with Alexander Maloney and Eva Silverstein</i>	570
32.1	Introduction	570
32.2	De Sitter compactifications of super-critical string theory	573
32.3	Metastability of the De Sitter vacuum	580
	<i>References</i>	589
33	Supergravity, M theory and cosmology	
	<i>Renata Kallosh</i>	592
33.1	Introduction	592
33.2	Extended supergravities with dS vacua	596
33.3	Hybrid inflation with D-branes	599
33.4	M theory on a four-fold with G-fluxes	606
	<i>References</i>	609

Part 8 Quantum cosmology **613**

34	The state of the universe	
	<i>James Hartle</i>	615
34.1	Introduction	615
34.2	Final theories	616
34.3	Effective theories	617
34.4	Directions	619
	<i>References</i>	620

35	Quantum cosmology	
	<i>Don Page</i>	621
35.1	Motivation for a quantum state of the cosmos	621
35.2	The Hartle–Hawking proposal for the quantum state	622
35.3	Zero-loop quantum cosmology and FRW-scalar models	624
35.4	Real classical solutions for the FRW-scalar model	627
35.5	Complex classical solutions for the FRW-scalar model	629
35.6	FRW-scalar models with an exponential potential	632
35.7	Summary	646
	<i>References</i>	647
36	Quantum cosmology and eternal inflation	
	<i>Alexander Vilenkin</i>	649
36.1	Introduction	649
36.2	Quantum cosmology	650
36.3	The tunnelling wave function	651
36.4	Alternative proposals for the wave function	655
36.5	Semiclassical probabilities	657
36.6	Comparing different wave functions	658
36.7	Do we need quantum cosmology?	660
36.8	Is quantum cosmology testable?	661
	<i>References</i>	663
37	Probability in the deterministic theory known as quantum mechanics	
	<i>Bryce DeWitt</i>	667
37.1	Quantum measurement	667
37.2	Reality	668
37.3	Signalling by permutations	669
37.4	Equal likelihood	671
37.5	The case of degeneracy	672
37.6	Unequal probabilities	673
38	The interpretation of quantum cosmology and the problem of time	
	<i>Jonathan Halliwell</i>	675
38.1	Introduction	675
38.2	The classical case	678
38.3	The decoherent histories approach to quantum theory	684
38.4	The induced inner product	685
38.5	The class operators	686
38.6	Decoherence and the decoherence functional	688

38.7	Summary and discussion	689
	<i>References</i>	690
39	What local supersymmetry can do for quantum cosmology	
	<i>Peter D'Eath</i>	693
39.1	Introduction	693
39.2	No-boundary state	698
39.3	The classical Riemannian boundary-value problem	699
39.4	Self-duality	703
39.5	Canonical quantum-theory of N=1 supergravity: 'traditional variables'	709
39.6	Canonical quantization of N=1 supergravity: Ashtekar-Jacobson variables	715
39.7	Comments	717
	<i>References</i>	717
	Part 9 Cosmology	723
40	Inflation and cosmological perturbations	
	<i>Alan Guth</i>	725
40.1	The origin of inflationary fluctuations	725
40.2	The 1982 Nuffield workshop	729
40.3	Observational evidence for inflation	735
40.4	Eternal inflation	740
40.5	A new singularity theorem	743
40.6	The origin of the universe	750
	<i>References</i>	750
41	The future of cosmology: observational and computational prospects	
	<i>Paul Shellard</i>	755
41.1	Empirical cosmology	755
41.2	The cosmic microwave sky	756
41.3	Cosmological perturbations and cosmic concordance?	761
41.4	Critical observational tests	769
41.5	Primordial gravitational waves	772
41.6	Computational prospects	773
41.7	Afterword	776
	<i>References</i>	777

42	The ekpyrotic universe and its cyclic extension	
	<i>Neil Turok</i>	781
42.1	Introduction	781
42.2	Homage to the Ancients	783
42.3	The ekpyrotic universe model	784
42.4	The main problem	786
42.5	Flatness	788
42.6	Density perturbations	788
42.7	Brane collisions	790
42.8	The inter-brane potential	793
42.9	The cyclic universe	793
42.10	Back to the singularity	794
42.11	Conclusions	798
	<i>References</i>	798
43	Inflationary theory versus the ekpyrotic/cyclic scenario	
	<i>Andrei Linde</i>	801
43.1	Introduction	801
43.2	Chaotic inflation	803
43.3	Hybrid inflation	806
43.4	Quantum fluctuations and density perturbations	807
43.5	From the Big Bang to eternal inflation	809
43.6	Inflation and observations	811
43.7	Alternatives to inflation?	812
43.8	Ekpyrosis	814
43.9	Cyclic universe	819
43.10	Conclusions	830
	<i>References</i>	833
44	Brane (new) worlds	
	<i>Pierre Binétruy</i>	839
44.1	Why study brane cosmology?	839
44.2	Life on the brane	841
44.3	AdS/CFT correspondence	845
44.4	Moduli fields. Moduli space approximation	846
44.5	Cosmological constant	848
44.6	Bulk scalars	851
44.7	Infinite dimensions	853
44.8	Open problems	855
	<i>References</i>	856
45	Publications of Stephen Hawking	860
	<i>Index</i>	873
