

NUCLEAR PRINCIPLES IN ENGINEERING

Tatjana Jevremovic

Contents

Dedication	v
Contents	vii
Preface	xv
Foreword	xvii
Acknowledgments	xix
NUCLEAR CONCEPTS	1
1. INTRODUCTION	1
2. TERRESTRIAL NUCLEAR ENERGY	2
3. SPACE EXPLORATION AND NUCLEAR POWER	3
4. MEDICINE AND NUCLEAR PRINCIPLES	4
5. BOOK CONTENT	6
ATOMIC THEORY	9
1. INTRODUCTION	9
2. ATOMIC MODELS	10
2.1 The Cannonball Atomic Model	10
2.2 The Plum Pudding Atomic Model	12
2.3 Millikan's Experiment	14
2.4 The Planetary Atomic Model	15
2.4.1 Disproof of Thomson's Plum Pudding Atomic Model	15
2.4.2 Idea of a Nucleus in the Center of an Atom	18

2.4.3	Rutherford's Scattering Formula	21
2.4.4	Stability of the Planetary Atomic Model	24
2.5	The Smallness of the Atom	24
2.6	The Quantum Atomic Model	26
2.6.1	Quantum Leap	26
2.6.2	Absorption and Emission of Photons	27
2.6.3	The Bohr Model of the Hydrogen Atom	28
2.7	Atomic Spectra	31
2.7.1	The Balmer-Rydberg Formula	32
2.7.2	Properties of the Hydrogen Atom According to Bohr's Atomic Model	34
2.7.3	Ionization and Excitation	36
2.7.4	Hydrogen-Like Ions	39
2.7.5	Empirical Evidence of Bohr's Theory	40
2.8	Atoms of Higher Z	43
2.8.1	Quantum Numbers	43
2.8.2	The Pauli Exclusion Principle	45
2.8.3	The Aufbau Principle	48
2.9	The Periodic Table and Properties of the Elements	48
2.9.1	Electronic Configuration	50
2.9.2	Atomic Radius	51
2.9.3	Ionization Energy	52
2.10	Atomic Parameters	54
	PROBLEMS	58
	NUCLEAR THEORY	61
1.	INTRODUCTION	61
2.	THE NUCLEUS	62
2.1	Size, Shape and Density of Nucleus	63
2.2	Equivalence of Mass and Energy	64
2.3	Binding Energy of a Nucleus	68
2.4	Stability of the Nucleus	71
2.5	Protons and Neutrons	72
2.5.1	Protons and Proton Decay	73
2.5.2	Neutrons and Neutron Decay	74
2.6	Nuclear Forces	77
2.7	The Pauli Exclusion Principle and the Symmetry Effect	80
3.	NUCLEAR MODELS	81
3.1	The Liquid Drop Model and the Semi-empirical Mass Formula	81
3.2	The Shell Model	86
4.	PLANCK'S THEORY OF QUANTA	88
4.1	Black Body Radiation	89
4.2	Wein's Displacement Law	91

4.3	The Stefan-Boltzmann Law	92
4.4	The Rayleigh-Jeans Law	92
4.5	Planck's Law	93
5.	THE WAVE PARTICLE DUALITY	94
5.1	De Broglie's Hypothesis	95
5.2	Double-Slit Experiment	98
5.3	Experimental Evidence for the Wave-Particle Duality	103
5.4	The Uncertainty Principle	106
6.	SCHRÖDINGER EQUATION	111
6.1	Interpretation of Quantum Mechanics	111
6.2	Standing Waves	112
6.3	General Characteristics of the Quantum Wave Function	114
6.4	Wave Function for a Particle in an Infinite Well	116
6.5	A Wave Function for a Free Non – Relativistic Particle	118
6.6	Hydrogenic Wave Functions	119
	NUMERICAL EXAMPLE	120
	PROBLEMS	121
	RADIOACTIVE DECAY	127
1.	INTRODUCTION	127
2.	MECHANISM OF RADIOACTIVE DECAY	129
3.	KINETICS OF RADIOACTIVE DECAY	132
3.1	Decay Constant	132
3.2	Radioactive Decay	132
3.3	Activity	133
3.3.1	Definition	133
3.3.2	Units	134
3.4	Half-Life	134
3.5	Radioactive Decay Equilibrium	137
3.6	Production of Radioisotopes	143
4.	ALPHA DECAY	145
4.1	Mechanism of Alpha Decay	145
4.2	Kinetics of Alpha Decay	150
5.	BETA DECAY	152
5.1	Mechanism of Beta Decay	152
5.2	Kinetics of Beta-Minus Decay	155
5.3	Kinetics of Beta-Plus Decay	157
5.4	Kinetics of Orbital Electron Capture	159
5.5	Kinetics of Internal Conversion	161
5.6	Auger Electrons	161
6.	GAMMA DECAY	162
6.1	Mechanics of Gamma Decay	162
6.2	Kinetics of Gamma Decay	163

7. NATURAL RADIOACTIVITY	164
NUMERICAL EXAMPLE	168
PROBLEMS	169
INTERACTIONS OF RADIATION WITH MATTER	173
1. INTRODUCTION	173
2. INTERACTIONS OF CHARGED PARTICLES	174
2.1 Types of Interactions	174
2.1.1 Elastic Scattering of Charged Particles	174
2.1.2 Inelastic Scattering of Charged Particles with Electrons	177
2.1.3 Inelastic Scattering of Charged Particles with a Nucleus	178
2.2 Loss of Energy	180
2.2.1 Stopping Power ($-dE/dx$)	180
2.2.2 Relative Stopping Power	183
2.2.3 Secondary Electrons	183
2.2.4 Specific Ionization and Ion Pairs	186
2.2.5 Range of Interactions	187
3. ALPHA PARTICLES AND PROTONS	189
3.1 Mechanism of Energy Loss	189
3.2 Range - Energy Relationship	191
4. BETA PARTICLES (ELECTRONS AND POSITRONS)	196
4.1 Mechanism of Energy Loss	196
4.2 Range - Energy Relationship	202
5. PHOTONS (GAMMA AND X - RAYS)	207
5.1 Exponential Absorption Law	207
5.2 Mechanism of Energy Loss	211
5.2.1 Photoelectric Effect ($\gamma + \text{atom} \rightarrow e^- + \text{ion}$)	212
5.2.2 Compton Effect ($\gamma + \text{Atom} \rightarrow \gamma + e^- + \text{Ion}$)	220
5.2.3 Correction for Bound Electrons and Coherent (Rayleigh) Scattering	227
5.2.4 Pair Production ($\gamma + \text{Atom} \rightarrow e^+ + e^- + \text{Atom}$)	228
NUMERICAL EXAMPLE	231
PROBLEMS	232
NEUTRON PHYSICS	235
1. INTRODUCTION	236
2. NUCLEAR REACTIONS	236
3. NEUTRON SOURCES AND NEUTRON CLASSIFICATION	238
4. NEUTRON ATTENUATION	242
4.1 Concept of the Cross Section	242
4.2 Probability of Neutron Interactions	245
4.3 Neutron Mean Free Path	247
4.4 Reaction Rate and Concept of Neutron Flux	248

4.5	Neutron Interactions	250
4.5.1	Elastic Scattering (n, n)	252
4.5.2	Inelastic Scattering (n, n')	254
4.5.3	Radiative Capture (n, γ)	256
4.5.4	Charged Particle Emission (n, α), (n, p)	260
4.5.5	Hydrogen and Deuterium	261
4.5.6	Cross Sections for Different Neutron Interactions	261
4.6	Maxwell-Boltzmann Distribution	267
4.7	Doppler Broadening	273
4.8	Neutron Beam Attenuation and Neutron Activation	274
5.	FISSION	278
5.1	Mechanism of the Fission Process	278
5.2	Fission Rate and Reactor Power	280
5.3	Fission Neutrons	282
5.4	Fission γ Rays	284
5.5	Fission Products	285
5.5.1	Fission Yield	285
5.5.2	Formation and Removal of Fission Products in a Reactor	287
5.6	Energy Released in Fission	290
	NUMERICAL EXAMPLE	291
	PROBLEMS	292
	NEUTRON TRANSPORT	297
1.	INTRODUCTION	297
2.	CONCEPT OF TIME INDEPENDENT NEUTRON TRANSPORT	298
2.1	The Nuclear Chain Reaction	298
2.2	Fick's Law	300
2.3	Diffusion Coefficient and Diffusion Length	303
2.4	Neutron Diffusion Theory	309
2.4.1	One-Speed Neutron Diffusion Equation	309
2.4.2	Solution to One-Speed Neutron Diffusion Equation in Infinite Medium	312
2.4.3	Solution to One-Speed Neutron Diffusion Equation in Finite Medium	314
2.4.4	Neutron Diffusion in Multiplying Medium	315
2.4.5	Solution to One-Speed Neutron Diffusion Equation in Infinite Slab Bare Reactor	320
2.4.6	Solution to One-Speed Neutron Diffusion Equation in Rectangular Bare Parallelepiped Reactor	323
2.4.7	Solution to One-Speed Neutron Diffusion Equation in Spherical Bare Reactor	326

2.4.8	Solution to One-Speed Neutron Diffusion Equation in Cylindrical Bare Reactor	328
2.4.9	Two-Group Neutron Diffusion Theory	329
2.4.10	Multi-Group Neutron Diffusion Theory	333
3.	SLOWING DOWN OF NEUTRONS	334
3.1	Elastic Scattering in the Moderating Region	335
3.2	Energy Distribution in Elastic Scattering - Logarithmic Energy Decrement	341
3.3	Average Cosine of the Scattering Angle	345
3.4	Slowing Down of Neutrons in Infinite Medium	346
3.4.1	Slowing Down Density (Neutron Moderation) without Absorption	346
3.4.2	Lethargy	350
3.4.3	Slowing Down Density (Neutron Moderation) with Absorption	351
3.5	Spatial Distribution of the Slowing Down Neutrons	353
3.5.1	Fermi Model	353
3.5.2	Migration Length	359
4.	NEUTRON TRANSPORT IN THERMAL REACTORS	360
4.1	Neutron Life Time in Thermal Reactors	360
4.2	Homogeneous and Heterogeneous Reactors	364
4.3	Bare and Reflected Reactors	367
5.	CONCEPT OF THE TIME DEPENDENT NEUTRON TRANSPORT	369
5.1	Neutron Life Time and Reactor Period without Delayed Neutrons	370
5.2	Delayed Neutrons and Average Neutron Lifetime	373
5.3	Diffusion Equation for Transient Reactor	376
5.4	The Prompt Jump Approximation and Inhour Formula	381
	NUMERICAL EXAMPLE	384
	PROBLEMS	393
	NUCLEAR REACTOR CONTROL	397
1.	METHODS OF REACTOR CONTROL	397
1.1	Control Rods	398
1.1.1	Effect of Fully Inserted Control Rod on Neutron Flux in Thermal Reactors	398
1.1.2	Control Rod Worth in Fast Reactors	400
1.1.3	Effect of Partially Inserted Control Rod on Neutron Flux in Thermal Reactors	401
1.2	Chemical Shim	404
2.	FISSION PRODUCT POISONING	405
2.1	Xenon Poisoning	407

2.1.1	Production and Removal of ^{135}Xe During Reactor Operation	407
2.1.2	Xenon Poisoning After Reactor Shutdown	411
2.2	Samarium Poisoning	414
2.2.1	Production and Removal of ^{149}Sm During Reactor Operation	414
2.2.2	Samarium Poisoning After Reactor Shutdown	415
3.	TEMPERATURE EFFECTS ON REACTIVITY	416
3.1	Temperature Coefficients	416
3.2	Fuel Temperature Coefficient (Nuclear Doppler Effect)	418
3.3	The Void Coefficient	419
3.4	The Moderator Coefficient	420
3.4.1	Moderator Temperature Coefficient	420
3.4.2	Moderator Pressure Coefficient	421
	NUMERICAL EXAMPLE	421
	PROBLEMS	423
	Appendix 1: World-Wide Web Sources on Atomic and Nuclear Data	425
	Appendix 2: Atomic and Nuclear Constants	427
	Appendix 3: Prefixes	429
	Appendix 4: Units and Conversion Factors	431
	References	433
	Index	437
