

Design Engineering

H. CATHER

R. MORRIS

M. PHILIP

C. ROSE

Contents

<i>Series preface</i>	vii
1. The design process	1
1.1 Design and innovation	2
1.2 Design concepts	18
1.3 Scheme designs	37
1.4 Chapter review	52
2. Creative design practice	54
2.1 Objects, messages and experience	54
2.2 Ergonomics: analysing use and experience	57
2.3 How to make and use a 'brief'	61
2.4 Teaching and learning design	64
2.5 Models and design tools	70
3. Properties of materials	74
3.1 Classes of materials	75
3.2 Bonding in solids	82
3.3 Alloys	96
3.4 Properties of materials	106
4. Processes	132
4.1 Selecting a manufacturing process	132
4.2 The material removal processes	137
4.3 Conserving material by changing shape	161
4.4 Joining materials	179
5. Materials selection	190
5.1 Role of the materials engineer	190
5.2 Plain carbon steels	204
5.3 Cast irons	212
5.4 Stainless steels	215
5.5 Aluminium	217
5.6 Copper	222
6. Materials and the environment	225
6.1 Degradation of materials in the environment	225
6.2 Who is responsible for the environment?	242
6.3 Packaging	252
6.4 Waste management	253
6.5 Sorting and separation of plastics	256
6.6 Factors that control recyclability	260

7. Optimizing design	262
7.1 Measures of the performance of a process	262
7.2 The Taguchi approach to design	275
7.3 Improving reliability	294
7.4 Increasing product effectiveness	312
8. Managing design	330
8.1 Planning and coordination	330
8.2 Communication and information	336
8.3 What next?	346
Solutions to problems	348
Index	349
