

CONTROL SYSTEMS DESIGN

A New Framework

VLADIMIR ZAKIAN

Editor

Springer

Contents

List of Contributors	xii
----------------------------	-----

Part I. Basic Principles

1 Foundation of Control Systems Design	
<i>Vladimir Zakian</i>	3
1.1 Need for New Foundation	3
1.2 The Principle of Inequalities	19
1.3 The Principle of Matching	32
1.4 A Class of Linear Couples	43
1.5 Well-constructed Environment-system Models	48
1.6 The Method of Inequalities	61
1.7 The Node Array Method for Solving Inequalities	68
References	92

Part II. Computational Methods (with Numerical Examples)

2 Matching Conditions for Transient Inputs	
<i>Paul Geoffrey Lane</i>	97
2.1 Introduction	97
2.2 Finiteness of Peak Output	98
2.3 Evaluation of Peak Output	99
2.4 Example	106
2.5 Miscellaneous Results	111
2.6 Conclusion	115
References	119
3 Matching to Environment Generating Persistent Disturbances	
<i>Toshiyuki Satoh</i>	121
3.1 Introduction	121
3.2 Preliminaries	123
3.3 Computation of Peak Output via Convex Optimisation	124
3.4 Algorithm for Computing Peak Output	135

3.5	Numerical Example	135
3.6	Conclusions	143
	References	144
4	LMI-based Design	
	<i>Takahiko Ono</i>	145
4.1	Introduction	145
4.2	Preliminary	146
4.3	Problem Formulation	149
4.4	Controller Design via LMI	150
4.5	Numerical Example	161
4.6	Conclusion	163
	References	164
5	Design of a Sampled-data Control System	
	<i>Takahiko Ono</i>	165
5.1	Introduction	165
5.2	Design for SISO Systems	167
5.3	Design for MIMO Systems	184
5.4	Design Example	186
5.5	Conclusion	189
	References	189
<hr/>		
Part III. Search Methods (with Numerical Tests)		
<hr/>		
6	A Numerical Evaluation of the Node Array Method	
	<i>Toshiyuki Satoh</i>	193
6.1	Introduction	193
6.2	Detection of Stuck Local Search	194
6.3	Special Test Problems	195
6.4	Test Results	208
6.5	Effect of Stopping Rule 3	210
6.6	Conclusions	211
6.A	Appendix — Moving Boundaries Process with the Rosenbrock Trial Generator	211
	References	215
7	A Simulated Annealing Inequalities Solver	
	<i>James F Whidborne</i>	219
7.1	Introduction	219
7.2	The Metropolis Algorithm	220
7.3	A Simulated Annealing Inequalities Solver	221
7.4	Numerical Test Problems	224
7.5	Control Design Benchmark Problems	225
7.6	Conclusions	228

7.A Appendix – the Objective Functions 228
 References 229

8 Multi-objective Genetic Algorithms for the Method of Inequalities
Tung-Kuan Liu and Tadashi Ishihara 231

8.1 Introduction 231
 8.2 Auxiliary Vector Index 232
 8.3 Genetic Inequalities Solver 238
 8.4 Numerical Test Problems 243
 8.5 Control Design Benchmark Problems 245
 8.6 Conclusions 246
 References 247

Part IV. Case Studies

9 Design of Multivariable Industrial Control Systems by the Method of Inequalities
Olufawemi Taiwo 251

9.1 Introduction 251
 9.2 Application of the Method of Inequalities to Distillation Columns 255
 9.3 Design of Multivariable Controllers for an Advanced Turbofan Engine by the Method of Inequalities 269
 9.4 Improvement of Turbo-alternator Response by the Method of Inequalities 277
 References 281

10 Multi-objective Control using the Principle of Inequalities
G P Liu 287

10.1 Introduction 287
 10.2 Multi-objective Optimal-tuning PID Control 288
 10.3 Multi-objective Robust Eigenstructure Assignment 294
 10.4 Multi-objective Critical Control 302
 References 308

11 A MoI Based on \mathcal{H}^∞ Theory — with a Case Study
James F Whidborne 311

11.1 Introduction 311
 11.2 Preliminaries 313
 11.3 A Two Degree-of-freedom \mathcal{H}^∞ Method 314
 11.4 A MoI for the Two Degree-of-freedom Formulation 319
 11.5 Example — Distillation Column Controller Design 320
 11.6 Conclusions 325
 References 325

12 Critical Control of the Suspension for a Maglev Transport System	
<i>James F Whidborne</i>	327
12.1 Introduction	327
12.2 Theory	329
12.3 Model	330
12.4 Design Specifications	332
12.5 Performance for Control System Design	332
12.6 Design using the MoI	333
12.7 Conclusions	337
References	337
13 Critical Control of Building under Seismic Disturbance	
<i>Suchin Arunsawatwong</i>	339
13.1 Introduction	339
13.2 Computation of Performance Measure	341
13.3 Model of Building	344
13.4 Design Formulation	347
13.5 Numerical Results	349
13.6 Discussion and Conclusions	352
References	353
14 Design of a Hard Disk Drive System	
<i>Takahiko Ono</i>	355
14.1 Introduction	355
14.2 HDD Systems Design	356
14.3 Performance Evaluation	362
14.4 Conclusions	367
References	367
15 Two Studies of Robust Matching	
<i>Oluwafemi Taiwo</i>	369
15.1 Introduction	369
15.2 Robust Matching and Vague Systems	371
15.3 Robust Matching for Plants with Recycle	374
15.4 Robust Matching for the Brake Control of a Heavy-duty Truck – a Critical System	380
References	385
Index	387
