

Gut Flora, Nutrition, Immunity and Health

Edited by R Fuller
and G Perdigón

Blackwell
Publishing

Contents

<i>Preface</i>	xi
<i>Acknowledgements</i>	xii
1 The Intestinal Microflora	1
<i>G.W. Tannock</i>	
From Petri dish to polyacrylamide gel	1
Catalogues show diversity	7
A phoenix arises	7
Is it all the same in the end?	12
The formative years	14
Rules and regulations, but mind your language	15
2 Food and the Large Intestine	24
<i>S. Macfarlane and G.T. Macfarlane</i>	
The large intestine	24
Interactions of the microflora with the host	26
Effect of diet on the colonic microflora	26
Diet and bacterial species composition in the large intestine	26
Diet and bacterial metabolism	28
Intestinal bacteria and vitamins	30
Bacterial growth substrates in the large intestine	31
Breakdown of complex carbohydrates by intestinal bacteria	32
Protein breakdown by gut microorganisms	35
Toxological implications of amino acid fermentation	36
Effects of carbohydrate on amino acid fermentation	38
Short-chain fatty acids	39
Effect of diet on SCFA production	40
<i>In vitro</i> studies on SCFA production	40
SCFA and cell metabolism	41
SCFA and colon cancer	41
Lactate formation by gut microorganisms	41
3 The Health Benefits of Probiotics and Prebiotics	52
<i>G.R. Gibson, R.A. Rastall and R. Fuller</i>	
Summary	52
Introduction	52

Probiotics	55
Composition of probiotic preparations	55
Tracking probiotics through the gut	57
Prebiotics	59
Oligosaccharides as prebiotics	59
Lactulose	60
Inulin and fructooligosaccharides	60
Galactooligosaccharides	61
Soybean oligosaccharides	62
Lactosucrose	62
Isomaltooligosaccharides	63
Glucosaccharides	63
Xylooligosaccharides	64
Current status	64
Persistence of the prebiotic effect to distal regions of the colon	65
Anti-adhesive activities against pathogens and toxins	65
Targeted prebiotics	65
Attenuative properties	66
Defined health outcomes of probiotics and prebiotics	66
Improved tolerance to lactose	66
Protection from gastroenteritis	67
Coronary heart disease	67
Colon cancer	68
Vitamin synthesis	68
Irritable bowel syndrome	68
Improved digestion and gut function	68
Immunomodulation	69
Mineral bioavailability	69
Conclusions	69
4 Intestinal Microflora and Metabolic Activity	77
<i>A. Perez Chaia and G. Oliver</i>	
Dietary carbohydrates	77
Bacterial fermentation	79
SCFA production	82
SCFA and electrolytes absorption	84
Colonic metabolism	87
Physiological consequences of SCFA absorption	87
Probiotics and the intestinal metabolism of carbohydrates	89
5 The Role of the Immune System	99
<i>C.M. Riera, M. Maccioni and C.E. Sotomayor</i>	
Overview of the immune system	99
Introduction	99
Innate immune response	100

Early induced immune response	103
Adaptative immune response	104
B lymphocytes and the immunoglobulins	104
T lymphocytes and the T cell receptor complex	109
APCs and the MHC molecules	110
Education of lymphocytes in the primary lymphoid organs	115
Education of T lymphocytes in the thymus	115
Education of B lymphocytes in the bone marrow	117
The immune system functioning	119
Peripheral lymphoid tissues, a place where lymphocytes meet the antigen	119
Lymphocyte traffic	120
Activation of T cells	121
Cell-mediated immune response: generation of armed effector T cells	122
Generation of Th1 and Th2 cells	122
Cytotoxic T cells	124
Humoral immune response	125
Activation of B cells in the secondary lymphoid organs	125
Kinetics of the immune response	130
Endogenous regulation of the immune response	130
Tolerance to T cell repertoire	131
Tolerance to B cell repertoire	132
Immunoregulation	133
6 Behaviour of the Immune System in Eating Disorders	137
<i>A. Marcos, E. Nova and S. López-Varela</i>	
Relationship between nutrition and the immune system	137
The defence of the organism	137
Immune system behaviour under malnutrition	138
Effects of micronutrients on the immune system	139
Antioxidant vitamins	143
The immune system in eating disorders	146
Eating disorders as a clear example of malnutrition	146
Cytokine participation over the lack of infection in eating disorders	146
The interrelationship between leptin and cytokines	147
Conclusions	149
7 Mucosal Immune System and Malnutrition	155
<i>M.E. Ronx, N.H. Slobodianik, P. Gauffin Cano and G. Perdigon</i>	
Mucosal immunity	155
Introduction	155
Organized mucosal lymphoid tissues	156
Antigen uptake	156
Role of epithelial, toll-like receptors and dendritic cells	156
Tolerance to food	160

Effect of nutritional factors on the microenvironment of mucosal immune system	160
Nutrition and immunity	161
Nutritional effects on immune mechanisms	161
Essential amino acid deficiency and immune response	162
Nutritional deficiencies and mucosal immune defence systems in animals	163
Probiotics in malnutrition	166
Introduction	166
Protein malnutrition and immune response	167
Effects of probiotic addition to a renutrition diet	168
8 Immune Activation Versus Hyporesponsiveness and Tolerance in the Gut	178
<i>J. Chin and A. Mullbacher</i>	
Introduction	178
Innate and adaptative immunity	179
Antigen and the T cell response	180
Antigen-presenting cells in the GIT	181
T cell function in the GIT – the CD4 ⁺ population	181
$\gamma\delta$ T cells	183
Turnover of T cells	184
Intestinal epithelial cells	184
Peyer's patches – suppression of T cell responsiveness	185
Probiotic bacteria – a biological role as live or dead organisms	187
Immune activation by probiotic bacteria feeding	187
Probiosis – is it Gram-positive versus Gram-negative bacteria or is it live versus dead bacteria?	192
Summary and perspective	195
9 Food Hypersensitivity and Allergic Diseases	201
<i>R.K. Chandra</i>	
Introduction	201
Immunological mechanisms	201
Food allergens	202
Clinical manifestations	202
Identification of high risk infants for prevention	204
Preventive measures	204
Breast feeding	204
Hydrolysed formulas	205
Other measures	206
Management of food allergy	206
10 Nutritional and Microbial Modulation of Carcinogenesis	208
<i>R. Hughes and I. Rowland</i>	
Introduction	208

Bacteria and cancer overview	209
Bacterial metabolites	211
Enzyme activities	211
β -glucuronidase and β -glycosidase	211
Enzymic hydrolysis of plant flavonoids	212
Nitroreductase and nitrate reductase	213
Metabolism of heterocyclic amines	213
Metabolism of sulphur-containing compounds	214
Secondary bile acids	215
Fecapentaenes	216
Reduced exposure to toxic compounds	217
Formation of toxic and protective agents during fermentation	217
Carbohydrate fermentation	218
Short chain fatty acids	218
Products of colonic protein fermentation	219
Probiotics, prebiotics and cancer	220
11 The Role of Nutrition in Immunity of the Aged	237
<i>S. Walrand, M.-P. Vasson and B. Lesourd</i>	
Introduction	237
Aging and immune function	238
Innate immune system	238
Age-related changes in skin and mucous barriers	238
Age-related changes in phagocytic cells	238
Age-related changes in natural killer cells	243
Acquired immune system	244
Age-related involution of thymic function	244
Quantitative and qualitative changes in T cell subpopulations in the elderly	244
Age-related changes in T cell function	246
Changes in B cell number and function in the elderly	247
Nutritional regulation of immune function of the aged	248
Effect of protein-energy malnutrition on immune responses in aged people	248
Alterations in polymorphonuclear functions during PEM in the elderly	248
Alterations in monocyte/macrophage functions during PEM in the elderly	250
Alterations in T-cell mediated immunity during PEM in the elderly	250
Alterations in B-cell mediated immunity during PEM	252
Immune response during nutritional recovery in undernourished elderly persons	252
Influence of nutritional recovery on PMN function in old age	252
Influence of nutritional recovery on T cell function in old age	253
Influence of nutritional supplementation in healthy well-nourished elderly subjects	255
Concluding remarks	258
