

The background of the cover features a composite image. On the left, a man in a white hard hat and safety vest is looking at a clipboard. On the right, a close-up of a person's face shows an ear with a small probe or earpiece. At the top center, there is a piece of electronic equipment with a digital display showing '1000' and several buttons. A circuit diagram with green and blue nodes is overlaid on the left side of the image.

OCCUPATIONAL AUDIOMETRY

MONITORING AND PROTECTING HEARING AT WORK

Maryanne Maltby

Contents

Foreword	vi
Preface	vii
Acknowledgements	viii
Part I Noise Induced Hearing Loss	1
1 Noise induced hearing loss	3
2 Noise in the workplace	20
3 Hearing conservation	27
4 Personal hearing protection	46
5 Organisation of an audiometric health surveillance programme	60
6 Auditing and record keeping	79
Part II Occupational Audiometry	93
7 Case history and otoscopic examination	95
8 Audiometric techniques for occupational health monitoring	114
9 The audiogram and its categorisation	129
Part III Action and Referral	145
10 Causes of hearing loss and the role of the physician	147
11 Diagnostic audiometry	172
12 Rehabilitation and compensation	192
Part IV Background Science	209
13 Basic anatomy and physiology of the ear	211
14 Basic acoustics	221
References	232
Index	236
