

CAY HORSTMANN

Big Java

2ND EDITION

Contents

Preface	v
Special Features	xv
Chapter 1 Introduction	1
1.1 What Is Programming?	2
1.2 The Anatomy of a Computer	3
1.3 Translating Human-Readable Programs to Machine Code	8
1.4 The Java Programming Language	10
1.5 Becoming Familiar with Your Computer	12
1.6 Compiling a Simple Program	17
1.7 Errors	23
1.8 The Compilation Process	25
Chapter 2 Using Objects	33
2.1 Types and Variables	34
2.2 The Assignment Operator	36
2.3 Objects, Classes, and Methods	37
2.4 Method Parameters and Return Values	40
2.5 Number Types	43
2.6 Constructing Objects	44
2.7 Accessor and Mutator Methods	46

2.8	Implementing a Test Program	47
2.9	The API Documentation	49
2.10	Object References	52

Chapter 3 Implementing Classes **65**

3.1	Black Boxes	66
3.2	Designing the Public Interface of a Class	69
3.3	Commenting the Public Interface	74
3.4	Instance Fields	77
3.5	Implementing Constructors and Methods	79
3.6	Testing a Class	82
3.7	Categories of Variables	88
3.8	Implicit and Explicit Method Parameters	91

Chapter 4 Fundamental Data Types **103**

4.1	Number Types	104
4.2	Constants	110
4.3	Assignment, Increment, and Decrement	116
4.4	Arithmetic Operations and Mathematical Functions	118
4.5	Calling Static Methods	123
4.6	Strings	128
4.7	Reading Input	135

Chapter 5 Programming Graphics (Optional) **151**

5.1	Frame Windows	152
5.2	Drawing Shapes	154
5.3	Graphical Shapes	162
5.4	Colors	164
5.5	Drawing Complex Shapes	165
5.6	Reading Text Input	176
5.7	Comparing Visual and Numerical Information	179

Chapter 6	Decisions	189
6.1	The if Statement	190
6.2	Comparing Values	196
6.3	Multiple Alternatives	201
6.4	Using Boolean Expressions	213
Chapter 7	Iteration	231
7.1	while Loops	232
7.2	for Loops	241
7.3	Nested Loops	248
7.4	Processing Sentinel Values	251
7.5	Random Numbers and Simulations	260
Chapter 8	Arrays and Array Lists	279
8.1	Arrays	280
8.2	Array Lists	284
8.3	Wrappers and Auto-boxing	290
8.4	The Enhanced for Loop	292
8.5	Simple Array Algorithms	293
8.6	Two-Dimensional Arrays	298
8.7	Copying Arrays	303
Chapter 9	Designing Classes	323
9.1	Choosing Classes	324
9.2	Cohesion and Coupling	326
9.3	Accessors, Mutators, and Immutable Classes	329
9.4	Side Effects	329
9.5	Preconditions and Postconditions	335
9.6	Static Methods	340
9.7	Static Fields	342
9.8	Scope	346
9.9	Packages	351

Chapter 10	Testing and Debugging	371
10.1	Unit Tests	372
10.2	Providing Test Input	376
10.3	Test Case Evaluation	380
10.4	Regression Testing and Test Coverage	383
10.5	Logging	387
10.6	Using a Debugger	389
10.7	A Sample Debugging Session	392
Chapter 11	Interfaces and Polymorphism	409
11.1	Using Interfaces for Code Reuse	410
11.2	Converting Between Class and Interface Types	416
11.3	Polymorphism	418
11.4	Using Interfaces for Callbacks	420
11.5	Inner Classes	424
11.6	Processing Timer Events	427
11.7	Accessing Surrounding Variables	431
Chapter 12	Event Handling (Optional)	443
12.1	Events, Event Sources, and Event Listeners	444
12.2	Building Applications with Buttons	447
12.3	Processing Text Input	451
12.4	Mouse Events	455
Chapter 13	Inheritance	467
13.1	An Introduction to Inheritance	468
13.2	Inheritance Hierarchies	473
13.3	Inheriting Instance Fields and Methods	475
13.4	Subclass Construction	481
13.5	Converting Between Subclass and Superclass Types	482
13.6	Polymorphism	485
13.7	Access Control	492
13.8	Object: The Cosmic Superclass	495

Chapter 14 Graphical User Interfaces (Optional) 515**14.1 Using Inheritance to Customize Frames 516****14.2 Layout Management 518****14.3 Choices 520****14.4 Menus 530****14.5 Text Areas 536****14.6 Exploring the Swing Documentation 538****Chapter 15 Exception Handling 551****15.1 Throwing Exceptions 552****15.2 Checked and Unchecked Exceptions 555****15.3 Catching Exceptions 558****15.4 The finally Clause 561****15.5 Designing Your Own Exception Types 563****15.6 Case Study: A Complete Example 564****Chapter 16 Files and Streams 575****16.1 Reading and Writing Text Files 576****16.2 Text and Binary Formats 581****16.3 An Encryption Program 583****16.4 Random Access 588****16.5 Object Streams 594****Chapter 17 Object-Oriented Design 607****17.1 The Software Life Cycle 608****17.2 Discovering Classes 614****17.3 Relationships Between Classes 617****17.4 Case Study: Printing an Invoice 622****17.5 Case Study: An Automatic Teller Machine 634**

Chapter 18	Recursion	663
18.1	Triangle Numbers	664
18.2	Permutations	668
18.3	Recursive Helper Methods	676
18.4	The Efficiency of Recursion	678
18.5	Mutual Recursions	687
Chapter 19	Sorting and Searching	703
19.1	Selection Sort	704
19.2	Profiling the Selection Sort Algorithm	708
19.3	Analyzing the Performance of the Selection Sort Algorithm	711
19.4	Merge Sort	715
19.5	Analyzing the Merge Sort Algorithm	719
19.6	Searching	725
19.7	Binary Search	728
19.8	Sorting Real Data	731
Chapter 20	An Introduction to Data Structures	741
20.1	Using Linked Lists	742
20.2	Implementing Linked Lists	747
20.3	Abstract and Concrete Data Types	758
20.4	Stacks and Queues	762
Chapter 21	Advanced Data Structures	775
21.1	Sets	776
21.2	Maps	781
21.3	Hash Tables	783
21.4	Computing Hash Codes	791
21.5	Binary Search Trees	796
21.6	Tree Traversal	807
21.7	Using Tree Sets and Tree Maps	811
21.8	Priority Queues	815
21.9	Heaps	816
21.10	The Heapsort Algorithm	827

Chapter 22	Generic Programming	841
22.1	Type Variables	842
22.2	Implementing Generic Classes	844
22.3	Generic Methods	852
22.4	Constraining Type Variables	853
22.5	Raw Types	856
Chapter 23	Multithreading (Advanced)	863
23.1	Running Threads	864
23.2	Terminating Threads	870
23.3	Race Conditions	873
23.4	Synchronizing Object Access	879
23.5	Avoiding Deadlocks	882
23.6	An Application of Threads	889
Chapter 24	Internet Networking (Advanced)	905
24.1	The Internet Protocol	906
24.2	Application Level Protocols	910
24.3	A Client Program	913
24.4	A Server Program	916
24.5	URL Connections	924
Chapter 25	Relational Databases (Advanced)	935
25.1	Organizing Database Information	936
25.2	Queries	945
25.3	Installing a Database	953
25.4	Database Programming in Java	959
25.5	Case Study: A Bank Database	967
Chapter 26	XML (Advanced)	979
26.1	XML Tags and Documents	980
26.2	Parsing XML Documents	990
26.3	Creating XML Documents	999
26.4	Validating XML Documents	1006

Chapter 27	JavaServer Faces (Advanced)	1027
27.1	A Simple JSF Program	1028
27.2	JavaBeans Components	1034
27.3	JSF Components	1043
27.4	Navigation Between Pages	1045
27.5	A Three-Tier Application	1048
Appendix A	Java Language Coding Guidelines	1063
Appendix B	The Basic Latin and Latin-1 Subsets of Unicode	1071
Appendix C	The Java Library	1074
Appendix D	Adapting Java 5 Programs to Older Compilers	1120
Appendix E	Java Syntax Summary	1123
Appendix F	Java Operator Summary	1135
Appendix G	Java Keyword Summary	1137
Appendix H	Metric Conversion Factors	1140
Appendix I	HTML Summary	1141
Appendix J	Tool Summary	1146
Appendix K	javadoc Summary	1149
Appendix L	Number Systems	1152
Appendix M	Bit and Shift Operations	1158
Appendix N	UML Summary	1161
	Glossary	1163
	Index	1179
	Illustration Credits	1215
