List of Figures	ix
Acknowledgments for figures	xii
List of Tables	xv
Preface	xvii
Glossary	xxiii
Abbreviations used	xxv
Units	xxv
Remark	xxv
1 Nature and properties of sediment	1
1.1 Introduction	1
1.2 Quantitative aspects of sediment transport	2
1.3 Size of sediment particles	7
1.4 Sedimentation and consolidation	8
1.5 Rocks as source material for sediment	12
1.5.1 Igneous rocks	13
1.5.2 Metamorphic rocks	14
1.5.3 Sedimentary rocks	14
1.5.4 Rocks and minerals formed under the dominance of chemical processes	16
1.5.4.1 Carbonates	16
1.5.4.2 Evaporites	16
1.5.4.3 Precipitates and coatings	17
1.5.4.4 Clay particles	17
1.6 Organic matter	21
1.7 Chemical processes	22
1.7.1 The bonding process	22
1.7.2 Physical adsorption	23
1.7.3 Chemical adsorption	23

2	Chemical composition of freshwater	25
2.1	Physical properties	25
2.2	Dissolved compounds	29
2.2.1	General composition (quantities and origin)	29
2.2.2	The calcium bicarbonate/carbonate system	33
2.2.3	Phosphate and nitrogen chemistry	37
2.2.4	The phosphate and nitrogen cycles	38
2.3	Chemistry of the anoxic hypolimnion	40
2.3.1	Introduction	40
2.3.2	The pH sequence	42
2.3.3	The redox sequence	43
2.4	River chemistry	49
3	Sediment and the phosphate cycle. Part 1	51
	Speciation, fractionation and bioavailability	
3.1	Introduction	51
3.2	Binding of inorganic phosphate onto sediment	57
3.2.1	The process of phosphate adsorption onto Fe(OOH)	59
3.2.2	The process of phosphate precipitation with CaCO ₃	63
3.2.3	The adsorption and precipitation processes taken together	64
3.2.4	Practical consequences of P-binding onto sediment	70
3.3	Organic phosphates	71
3.4	Fractionation of sediment bound phosphate	73
3.4.1	Fractionation of inorganic P-compounds	73
3.4.2	Fractionation of organic P-compounds	81
3.5	Variability of and transfer between P-fractions	82
3.6	Bioavailability of sediment phosphate	88
3.7	Comparison between bioavailable P and P-fractionation	90
3	Sediment and the phosphate cycle. Part 2	97
	Release processes	
3.8.1	General aspects and studies	97
3.8.1.1	Introduction	97
3.8.1.2	Lake balance studies	100
3.8.1.3	Analysis of interstitial water	104
3.8.1.4	Studies on isolated samples	107
3.8.2	Resuspension by wind	114
3.8.3	Other aspects: drying of sediment and release by macrophytes	115
3.8.3.1	Drying of sediment	115
3.8.3.2	Release by macrophytes	118
3.8.4	Release under anoxic conditions	118

3.8.4.1	Introduction	118
3.8.4.2	Arguments against $\text{Fe}(\text{OOH})\approx\text{P}$ release by reduction of FeOOH	120
3.8.4.3	Calculations	121
3.8.4.4	Calculation of reducing capacity	121
3.8.4.5	Calculation of energy needed	122
3.8.4.6	Apatite dissolution	124
3.8.4.7	Mineralization of organic matter	126
3.8.4.8	Release of bacterial polyphosphates	128
3.8.5	Kinetics	129
3.9	Conclusions	130
3.10	Appendices	131
3.10.1	Appendix I	131
3.10.2	Appendix II: Tentative calculations of concentration of $\text{Tot-P}_{\text{bact}}$ and $\text{poly-P}_{\text{bact}}$ per g sediment (dw.)	132
4	Sediment and the nitrogen cycle	135
4.1	Introduction	135
4.2	N-balances	139
4.3	Mineralization and ammonification	142
4.3.1	Release of NH_4^+ from sediment	142
4.3.2	Processes involved	149
4.4	Denitrification	153
4.4.1	General aspects	153
4.4.2	Nitrite production	162
4.4.3	Rate of denitrification	165
4.4.4	Desiccation of sediment and denitrification	166
4.4.5	Modelling the denitrification rate	167
4.4.6	Denitrification in different ecosystems	169
4.5	Dissimilatory nitrate reduction	174
4.6	Nitrification	176
4.7	Combined studies	177
4.8	Links with other elements	180
4.8.1	Link with salinity	180
4.8.2	Links between N, P and S cycle	180
5	Methodological aspects	183
5.1	Analytical methods for N, P, S and Fe compounds	183
5.1.1	Determination of NH_3 with Nessler's reagent or as indophenolblue	183
5.1.1.1	With or without distillation	184
5.1.1.2	Using a modified indophenolblue method	184

5.1.2	Determination of $\Sigma(\text{NO}_2^- \text{ and } \text{NO}_3^-)$ after reduction with TiCl_3	185
5.1.2.1	With distillation	185
5.1.2.2	With Nessler's reagent, without distillation	186
5.1.2.3	With the indophenolblue method	186
5.1.3	Determination of NO_2^-	186
5.1.4	Determination of COD (org-C) and org-N by digestion with $\text{K}_2\text{Cr}_2\text{O}_7$	187
5.1.5	Determination of urea	188
5.1.6	Determination of o-P and Tot-P	189
5.1.6.1	Procedure for o-P	189
5.1.6.2	Procedure for Tot-P	189
5.1.7	Extractions of $\text{FeOOH}\approx\text{P}$ and $\text{CaCO}_3\approx\text{P}$ by chelating compounds	190
5.1.8	Extractions of org-P	192
5.1.9	Determination of Fe^{2+} and Fe^{3+}	192
5.1.9.1	Procedure for Fe^{2+}	192
5.1.9.2	Procedure for Fe^{3+}	192
5.1.9.3	Procedure for Tot-Fe	193
5.1.9.4	Testing $\text{Fe}(\text{OOH})\approx\text{P}$ extractability	193
5.1.10	Determination of SO_4^{2-} and $\text{H}_2\text{S} + \text{FeS}$	193
5.1.10.1	Determination of SO_4^{2-}	193
5.1.10.2	Determination of H_2S and FeS	194
5.2	Potential differences	195
5.2.1	Redox potential	195
5.2.2	Oxidation-reduction potentials	197
5.2.3	pH dependent redox potentials	198
5.2.4	The 'apparent' redox potential in mud/water systems	199
5.3	A note on diffusion calculations	200
5.3.1	Introduction	200
5.3.2	The diffusion constant	200
5.3.3	Porosity and tortuosity	201
5.3.4	Calculation of diffusive flux from 'peepers'	204
5.3.5	Influence of eddy diffusion	205
