# **WATER**

# **TECHNOLOGY**

**AN INTRODUCTION FOR  
ENVIRONMENTAL SCIENTISTS  
AND ENGINEERS**

SECOND EDITION

# Contents

<i>Preface</i>	<i>xix</i>
<i>Acknowledgements</i>	<i>xxi</i>

## Part I

<b>Water Resources and Ecology</b>	<b>1</b>
<b>1. Basic Considerations in Hydrobiology</b>	<b>3</b>
<hr/>	
1.1 Hydrological cycle	3
1.2 Comparison between freshwater and saline water	6
1.3 Freshwater habitats	7
1.4 The catchment as area of study	8
References	10
Further reading	11
<b>2. Water Resources</b>	<b>12</b>
<hr/>	
2.1 Surface waters	12
2.1.1 Rivers and lakes	12
2.1.2 Reservoirs	17
2.2 Groundwater	19
2.2.1 Groundwater quality	24
References	27
Further reading	28
<b>3. Factors Determining the Distribution of Animals and Plants in Freshwaters</b>	<b>29</b>
<hr/>	
Introduction	29
3.1 Natural dispersion	29
3.2 Catchment water quality	32
3.3 River flow and substrate	33
3.4 Dissolved solids	37
3.5 Dissolved oxygen and temperature	41
3.6 Suspended solids	45
3.7 River zonation	46
3.8 Lentic systems	47
References	50
Further reading	50

<b>4. Basic Aquatic Ecosystems</b>	<b>51</b>
<hr/>	
4.1 Community structure	51
4.1.1 Phototrophic (autotrophic)	52
4.1.2 Heterotrophic	53
4.1.3 Detritivores	53
4.1.4 Herbivores	53
4.1.5 Predators	53
4.2 Allochthonous and autochthonous inputs	55
4.2.1 Upland (shaded) region	55
4.2.2 Midland (unshaded) region	55
4.2.3 Lowland (unshaded) area	56
4.3 Habitat zonation	56
4.4 Lentic ecology	60
References	62
Further reading	63
<b>5. Micro-organisms and Pollution Control</b>	<b>64</b>
<hr/>	
Introduction	64
5.1 Nutritional classification	65
5.2 Oxygen requirement of bacteria	67
5.3 Microbial oxygen demand	68
5.3.1 Self-purification	68
5.3.2 Oxygen balance	70
5.3.3 Reaeration	70
5.3.4 The oxygen-sag curve	74
5.4 The BOD test	80
References	86
Further reading	86
<b>6. Water Pollution</b>	<b>87</b>
<hr/>	
Introduction	87
6.1 Toxic substances	88
6.2 Suspended solids	92
6.2.1 Inert solids	92
6.2.2 Oxidizable solids	94
6.3 Deoxygenation	94
6.4 Addition of non-toxic salts	98
6.4.1 Algal toxins	102
6.5 Heating of the water	104

6.6	The effect on the buffering system	106
6.6.1	Acid rain	106
6.6.2	Acid mine drainage	108
6.7	Fish kills	110
6.8	Conclusion	110
	References	111
	Further reading	112

## Part II

	<b>Water Quality Management and Assessment</b>	<b>113</b>
<b>7.</b>	<b>Water Basin Management</b>	<b>115</b>
<hr/>		
	Introduction	115
7.1	Basic management programme for rivers	115
7.2	Water quality and catchment management plans	121
7.2.1	Water quality management plans	121
7.2.2	Catchment management	122
7.3	The Water Framework Directive	127
7.3.1	Introduction	127
7.3.2	River basin districts	129
7.3.3	River basin characterization	130
7.3.4	Implementation of the Water Framework Directive in the UK	132
7.3.5	River basin planning	133
7.3.6	Environmental monitoring	134
7.3.7	Ecological classification system for surface and ground waters	135
7.3.8	Priority and other specific polluting substances	137
7.3.9	Conclusion	137
7.4	Diffuse pollution	143
7.4.1	Remedial action	143
7.4.2	Afforestation and water quality	147
7.4.3	Conclusion	150
	References	151
	Further reading	152
<b>8.</b>	<b>Water Quality and Regulation</b>	<b>153</b>
<hr/>		
	Introduction	153
8.1	Potable waters	156
8.2	Surface waters not used primarily for supply	171
8.3	Wastewaters	177
8.4	Groundwaters	183
8.5	Regulation	185

8.6 Integrated pollution control (IPC)	188
References	191
Further reading	192
<b>9. Water Quality Assessment</b>	<b>193</b>
<hr/>	
9.1 Physico-chemical and biological surveillance	193
9.2 Sampling surface waters	194
9.2.1 Sampling programmes	194
9.2.2 Mixing	197
9.2.3 Safety	198
9.2.4 Hydrology	200
9.2.5 Chemical sampling	204
9.2.6 Biological sampling	206
9.3 Biological indices	214
9.3.1 Pollution indices	215
9.3.2 Diversity indices	232
9.3.3 Using biological indices	235
9.3.4 Multivariate analysis	237
9.4 Chemical data	240
9.4.1 Chemical indices	240
9.4.2 Mass balance and modelling	241
9.5 The UK General Quality Assessment Classification Scheme	246
References	252
Further reading	254

## Part III

<b>Drinking Water Treatment and Supply</b>	<b>255</b>
<b>10. Water Treatment and Distribution</b>	<b>257</b>
<hr/>	
Introduction to treatment	257
10.1 Unit processes	259
10.1.1 Preliminary screening	259
10.1.2 Storage	260
10.1.3 Aeration	263
10.1.4 Chemical pre-treatment	263
10.1.5 Coagulation	263
10.1.6 Sedimentation	266
10.1.7 Filtration	268
10.1.8 Disinfection	273
10.1.9 Fluoridation	275
10.1.10 Advanced water treatment	276
10.1.11 Sludge production and disposal	276

10.2 Water distribution	278
References	281
Further reading	282
<b>11. Drinking Water Contamination</b>	<b>283</b>
<hr/>	
Introduction	283
11.1 Problems arising from resource	283
11.1.1 Taste and odour	285
11.1.2 Iron and manganese	287
11.1.3 Nitrate	289
11.1.4 Organic compounds	292
11.1.5 The future	294
11.2 Water quality problems arising from water treatment	294
11.2.1 Chlorine and chlorinated organic compounds	295
11.2.2 Fluoride	297
11.3 Water quality problems arising from the distribution system	299
11.3.1 Polycyclic aromatic hydrocarbons (PAHs)	299
11.3.2 Animals and biofilm	301
11.4 Water quality problems arising in home plumbing situations	303
11.4.1 Corrosion	303
11.4.2 Lead	305
11.4.3 Copper	307
References	307
Further reading	308
<b>12. Pathogens and Their Removal</b>	<b>309</b>
<hr/>	
Introduction	309
Classification of pathogens	309
Strategies for controlling pathogen transfer	310
12.1 Waterborne pathogens	312
12.1.1 Primary bacterial pathogens	312
12.1.2 Opportunistic bacterial pathogens	314
12.1.3 Viruses	317
12.1.4 Protozoa	319
12.1.5 Conclusion	322
12.2 Microbial assessment of drinking water quality	322
12.2.1 Monitoring pathogens	323
12.2.2 Heterotrophic plate count bacteria	324
12.2.3 Enumeration techniques	326

12.2.4	Emerging technologies	329
12.2.5	Standards	330
12.3	Removal of pathogenic organisms	332
12.3.1	Environmental factors of survival	332
12.3.2	Wastewater treatment	334
12.3.3	Water treatment	340
	References	344
	Further reading	346

## Part IV

### **Wastewater Treatment 347**

#### **13. Nature of Wastewater 349**

---

13.1	Composition of wastewater	349
13.2	Sewage collection	356
13.3	Surface run-off	361
13.4	Charging	362
13.5	Industrial and agricultural wastewaters	363
13.6	Working with sewage	365
	References	366
	Further reading	367

#### **14. Introduction to Wastewater Treatment 368**

---

14.1	Requirements of treatment	368
14.2	Basic unit processes	371
14.2.1	Screens	375
14.2.2	Grit separation	376
14.2.3	Other preliminary processes	377
14.2.4	Storm water	378
14.2.5	Primary sedimentation (primary treatment)	379
14.2.6	Biological (secondary) treatment	385
14.2.7	Secondary sedimentation	385
14.2.8	Tertiary treatment	386
14.2.9	Sludge treatment	387
14.3	Pre-treatment of industrial wastewaters	387
14.4	Design of wastewater treatment plants	390
14.4.1	Selection of processes	390
14.4.2	Example of treatment plant	391
	References	398
	Further reading	398

<b>15. Biological Aspects of Secondary Sewage Treatment</b>	<b>399</b>
<hr/>	
15.1 Processes	399
15.2 Kinetics	406
15.2.1 Bacterial kinetics	406
15.2.2 Rates of reaction	409
15.2.3 Enzyme reactions	411
15.2.4 Environmental factors affecting growth	413
15.2.5 Kinetic equations of bacterial growth	414
15.3 Treatability, toxicity and biodegradability assessment	418
15.3.1 The activated sludge respiration inhibition test	419
15.3.2 The BOD inhibition test	420
15.3.3 The Microtox <sup>®</sup> bioassay test	420
15.3.4 Dehydrogenase enzymatic assay	421
References	421
Further reading	422
<b>16. Fixed-film Systems</b>	<b>423</b>
<hr/>	
16.1 The basis of the process	423
16.2 Percolating filters	423
16.2.1 Film development	424
16.2.2 Design and modifications	429
16.3 Operational problems of percolating filters	432
16.3.1 Ponding	432
16.3.2 Nitrification	434
16.3.3 Fly nuisance	436
16.4 Other fixed-film reactors	437
16.4.1 Rotating biological contactors	437
16.4.2 Submerged aerated filters	439
16.4.3 Fluidized beds	441
16.4.4 Nitrifying filters	442
References	442
Further reading	443
<b>17. Activated Sludge</b>	<b>444</b>
<hr/>	
17.1 The process	444
17.2 Process control	446
17.2.1 Biomass control	446
17.2.2 Plant loading	448
17.2.3 Sludge settleability	450
17.2.4 Sludge activity	451

17.3	Modes of operation	452
17.3.1	Aeration	452
17.3.2	Aeration management	453
17.3.3	Oxygen transfer	455
17.3.4	The use of pure oxygen	457
17.4	Aeration tank design	457
17.4.1	Tank configuration	457
17.4.2	Completely mixed reactors	459
17.5	Common modifications	463
17.5.1	Tapered aeration (plug flow)	463
17.5.2	Contact stabilization (both plug and completely mixed)	463
17.5.3	Incremental feeding or step aeration (plug flow)	464
17.5.4	Sequencing batch reactors (SBR)	464
17.5.5	Low-area high-rate systems	465
17.6	Ecology	467
17.7	Operational problems	468
17.7.1	Flocculation	468
17.7.2	Floc morphology	469
17.7.3	Sludge problems	469
17.7.4	Identifying problems	472
17.8	Remedial measures	477
17.8.1	Operational control	477
17.8.2	Chemical addition	478
17.8.3	Process modification	479
	References	480
	Further reading	481
<b>18.</b>	<b>Other Biological Treatment Systems</b>	<b>482</b>
<hr/>		
	Introduction	482
	Bioaugmentation	482
18.1	Stabilization ponds	484
18.1.1	Introduction	484
18.1.2	Anaerobic lagoons	485
18.1.3	Oxidation ponds	487
18.1.4	Aeration lagoons	493
18.2	Plants and wetlands	493
18.2.1	Plants	493
18.2.2	Wetlands	494
18.3	Nutrient removal	498
18.3.1	Denitrification	498
18.3.2	Phosphorus removal	502
18.3.3	Biological nutrient removal systems	504

18.4	Composting	507
18.4.1	Introduction	507
18.4.2	The process	507
18.4.3	Operational factors	508
18.4.4	Composting systems	511
18.4.5	Straw composting	514
18.4.6	Product quality	515
	References	515
	Further reading,	517

## **19. Anaerobic Treatment** **518**

---

	Introduction	518
19.1	Flow-through systems (digestion)	521
19.1.1	Design	523
19.1.2	Operation	526
19.2	Biogas and other products of digestion	529
19.3	Contact anaerobic systems	531
19.3.1	Anaerobic activated sludge	531
19.3.2	Up-flow anaerobic sludge blanket (UASB) process	532
19.3.3	Static media filter	532
19.3.4	Fluidized and expanded media	533
	References	533
	Further reading	534

## **20. Physico-chemical Treatment Processes** **535**

---

	Introduction	535
20.1	Equalization	535
20.2	Coagulation	538
20.3	Sedimentation	543
20.3.1	Sedimentation theory	543
20.3.2	Design of sedimentation tanks	549
20.4	Flotation	549
20.5	Chemical precipitation	551
20.5.1	Removal of calcium and magnesium	551
20.5.2	Phosphate removal	553
20.6	Adsorption	556
20.6.1	Powered activated carbon (PAC)	556
20.6.2	Granular activated carbon (GAC)	557
20.7	Ion exchange	560

20.8	Membrane filtration	561
20.8.1	Microfiltration	562
20.8.2	Ultrafiltration	564
20.8.3	Reverse osmosis	564
20.8.4	Nanofiltration	566
20.8.5	Process design	566
20.8.6	Electrodialysis	569
	References	570
	Further reading	571

## **21. Sludge Treatment and Disposal** **572**

---

21.1	Sludge characteristics	572
21.2	Sludge treatment	574
21.2.1	Thickening	574
21.2.2	Stabilization	577
21.2.3	Dewatering	581
21.3	Sewage sludge disposal	588
21.3.1	Incineration	590
21.3.2	Sea disposal	591
21.3.3	Landfill	591
21.3.4	Disposal to agricultural land	592
21.3.5	Heavy metal contamination	593
21.3.6	General sludge application guidelines	595
21.3.7	EU sludge application guidelines	596
21.3.8	International sludge application guidelines	599
21.3.9	Other uses	601
	References	601
	Further reading	602

## **22. Household and Small-scale Treatment Systems** **603**

---

	Introduction	603
22.1	Cesspools	604
22.2	Septic tanks	606
22.2.1	The process	606
22.2.2	Design	609
22.2.3	Operation	611
22.2.4	Maintenance	612
22.2.5	Special wastewaters	612
22.3	Percolation areas	614

22.4 Small complete treatment systems	617
References	620
Further reading	620

**Part  
V**

<b>The Future</b>	<b>621</b>
-------------------	------------

<b>23. Sustainability Principles in Water Management</b>	<b>623</b>
--	------------

---

23.1 The global perspective	623
23.2 Climate change	624
23.3 Sustainability	627
23.4 Conclusion	629
References	630
Further reading	631

<i>Index</i>	633
