

INDOOR AIR QUALITY ENGINEERING

Yuanhui Zhang

CRC PRESS

Contents

Chapter 1	Air Quality and You	1
1.1	Background.....	1
1.1.1	Outdoor Air Quality.....	2
1.1.2	Indoor Air Quality.....	4
1.2	Terminology and Definitions.....	6
1.3	Units.....	7
	Discussion Topics.....	8
	References.....	8
Chapter 2	Properties of Indoor Air Contaminants	11
2.1	Particle Density.....	11
2.2	Particle Shape.....	12
2.3	Particle Size.....	13
2.3.1	Human Respiratory System.....	17
2.3.2	Particle Size Categories.....	17
2.3.3	Particle Diameters.....	20
2.4	Concentration of Gases and Particles.....	21
2.5	Air Contaminants and Sources.....	25
2.5.1	Asbestos.....	25
2.5.2	Formaldehyde.....	26
2.5.3	Molds.....	28
2.5.4	Dust Mites.....	29
2.5.5	Smoke and Fumes.....	30
2.5.6	Radon (Rn).....	31
2.5.7	Volatile Organic Compounds (VOCs).....	31
2.5.8	Airborne Contaminants in Animal Environments.....	32
2.6	Threshold Limit Values for Typical Indoor Air Contaminants.....	33
2.6.1	Normalized Air Contaminant Concentration.....	36
	Discussion Topics.....	37
	Problems.....	37
	References.....	39
Chapter 3	Particle Size Statistics and Distribution	41
3.1	Number Distribution.....	41
3.2	Mass Distribution.....	47
3.3	Other Moment Averages and Distributions.....	51
3.4	The Lognormal Distribution.....	53
3.5	Log-Probability Graphs.....	59
3.6	The Hatch-Choate Conversion Equation.....	63
3.7	Other Types of Particle Size Distributions.....	65
3.7.1	The Rosin-Rammler Distribution.....	65
3.7.2	The Nukiyama-Tanasawa Distribution.....	66
3.7.3	The Power-Law Distribution.....	66

3.7.4	The Exponential Distribution	66
3.7.5	The Khrgian–Mazin Distribution	66
3.7.6	Chen’s Empirical Distribution	67
Discussion Topics		67
Problems		67
References		69
Chapter 4	Mechanics of Particles.....	71
4.1	Reynolds Numbers for Fluids and Particles	72
4.2	Newton’s Resistance Law.....	77
4.3	Stokes’s Law	80
4.4	Slip Correction Factor	84
4.5	Settling Velocity and Mechanical Mobility	87
4.6	Nonspherical Particles and Dynamic Shape Factor	90
4.7	Aerodynamic Diameter.....	91
4.8	Relaxation Time.....	95
4.9	Stopping Distance.....	98
Discussion Topics		100
Problems		101
References		103
Chapter 5	Gas Properties and Kinetics	105
5.1	Ideal Gas Law.....	106
5.2	Molecular Speeds	107
5.3	Kinetic Energy	112
5.4	Mean Free Path.....	113
5.5	Collision of Gas Molecules with a Surface	117
5.6	Viscosity.....	119
5.6.1	Viscosity for a Single Gas	119
5.6.2	Viscosity for a Mixture of Gases	124
5.7	Diffusivity	126
5.7.1	Concentration Variation Caused by Diffusion.....	128
5.8	Molecular Collision Speed of a Mixture of Gases	132
Discussion Topics		136
Problems		136
References		138
Chapter 6	Diffusion and Coagulation of Particles	139
6.1	Thermal Velocity of Particles	140
6.2	Mean Free Path of Particles	142
6.3	Diffusion Coefficient of Particles.....	144
6.4	Diffusive Deposition.....	149
6.4.1	Interface with Concentration Gradient	149
6.4.2	Deposition Interface without Concentration Gradient.....	151
6.4.3	Total Deposition Velocity	155

6.5	Diffusive Denuders	157
6.5.1	Coating Substrates for Denuders	158
6.5.2	Cylindrical Tubing Denuders	159
6.5.3	Rectangular Channels and Parallel Circular Plates	160
6.5.4	Annular Tubes	161
6.5.5	Wire Screen	163
6.5.6	Sampling Trains.....	164
6.6	Diffusion Batteries	165
6.6.1	Basic Diffusion Battery Types	165
6.6.2	Typical Diffusion Batteries	166
6.7	Monodisperse Coagulation	168
6.8	Polydisperse Coagulation	174
6.9	Kinematical Coagulation	178
	Discussion Topics	180
	Problems	181
	References.....	183

Chapter 7	Impaction	185
7.1	Air Jets	185
7.2	Impaction Efficiency of Particles in a Free Jet	188
7.3	Cutsize of Impacted Particles	194
7.4	Stokes Number Approach.....	196
7.5	Cascade Impactors	199
7.6	Virtual Impactors	201
	Discussion Topics	203
	Problems	203
	References.....	205

Chapter 8	Sampling Efficiency.....	207
8.1	Air Sampler and Sampling Efficiency	207
8.2	Isokinetic Sampling	209
8.3	Anisokinetic Sampling	211
8.3.1	Superisokinetic Sampling.....	211
8.3.2	Subisokinetic Sampling.....	211
8.3.3	Misalignment Sampling	215
8.4	Sampling in Calm Air.....	220
8.5	Sampling in Ducts	225
8.5.1	Sampling Locations — Equal-Area Method	226
8.5.2	Sampling Locations — Tchebycheff Method.....	230
8.6	Sampling of Vapor and Gases	231
8.6.1	Sampling Procedures.....	232
8.6.2	Selection of Sampling Devices	232
8.7	Sampling Rate Control	233
8.7.1	Conventional Flow-Rate Control Devices	233
8.7.2	Critical Venturi	234

8.8	Sampling of PM Emission from Buildings.....	240
	Discussion Topics	243
	Problems	244
	References.....	246

Chapter 9 Deposition, Production, and Resuspension of Airborne

	Particles.....	249
9.1	Quiescent Batch Settling for Monodisperse Particles	250
9.2	Deposition of Perfect-Mixing Batch Settling	252
9.3	Continuous Perfect-Mixing Models	254
	9.3.1 Macro-Mixing Model without Source or Sink.....	254
	9.3.2 Average Vertical Velocity Model	255
9.4	Deposition in Incomplete Mixing Airspaces.....	258
9.5	Deposition of Polydisperse Particles.....	259
9.6	Particle Production Rate in a Ventilated Airspace	260
	9.6.1 Net Particle Production in a Ventilated Airspace	264
9.7	Application of Particle Deposition.....	264
9.8	Particle Adhesion and Resuspension.....	268
	9.8.1 Particle Balance under Adhesive Force	268
	9.8.2 Particle Resuspension.....	271
	Discussion Topics	275
	Problems	275
	References.....	277

Chapter 10 Filtration..... 279

10.1	Filtration Mechanisms	280
	10.1.1 Interception.....	281
	10.1.2 Impaction.....	282
	10.1.3 Diffusion.....	283
	10.1.4 Gravitational Settling	283
	10.1.5 Electrostatic Deposition	284
	10.1.6 Total Single-Fiber Collection Efficiency	285
10.2	Filter Efficiency	285
10.3	Filter Performance Criteria.....	290
10.4	Standardized Filter Testing Methods.....	292
	10.4.1 Filter Efficiency Tests.....	292
	10.4.2 Arrestance	292
	10.4.3 Dust-Spot Efficiency	293
	10.4.4 Fractional Efficiency or Penetration	294
	10.4.5 Efficiency by Particle Size	294
	10.4.6 Dust-Holding Capacity Tests	295
	10.4.7 Leakage (Scan) Tests.....	296
	10.4.8 Environmental Tests	296
10.5	Cleanroom Requirements	297
	10.5.1 Cleanroom Criteria.....	297
	10.5.2 Cleanroom Applications.....	299

10.5.3	Air Cleaning for Cleanrooms.....	299
10.5.4	Fibrous Air Filters	300
10.5.5	Airflow Pattern Control.....	301
10.6	Typical Fibrous Filters.....	301
10.6.1	Residential Air Filters	305
10.7	Dust Bag Houses	306
10.8	Limitations of Fibrous Filters.....	307
	Discussion Topics	308
	Problems	308
	References.....	309

Chapter 11	Aerodynamic Air Cleaners	311
11.1	Return-Flow Cyclones	312
11.1.1	Particle Separation Efficiency	312
11.1.2	Pressure Drop of Return-Flow Cyclones.....	317
11.2	Uniflow Cyclones	319
11.2.1	Particle Separation Efficiency in Laminar Flow.....	321
11.2.2	Collection Efficiency in Complete-Mixing Flow	326
11.2.3	Pressure Drop in Uniflow Cyclones	329
11.3	Wet Scrubbers.....	333
11.3.1	Spray Chamber Scrubber	336
11.4	Venturi Scrubber	342
11.5	Other Noncontact Particle Cleaners	345
11.6	Particle Collector Performance Criteria	345
	Discussion Topics	347
	Problems	347
	References.....	349

Chapter 12	Electrostatic Precipitation.....	351
12.1	Electrostatic Force and Field Intensity	351
12.2	Electrical Mobility and Terminal Velocity in an Electrical Field.....	356
12.2.1	Terminal Velocity in the Stokes Region ($Re_p \leq 1$)	356
12.2.2	Electrical Mobility.....	356
12.2.3	Terminal Velocity in the Non-Stokes Region ($Re_p > 1$)	357
12.3	Particle Charging	359
12.3.1	Field-Charging Process	359
12.3.2	Diffusive-Charging Process.....	366
12.3.3	Total Charge of Particles.....	368
12.3.4	Charging Limit	370
12.3.5	Corona Discharge	371
12.4	Parallel-Plate Electrostatic Precipitators (ESPs).....	374
12.4.1	Laminar Flow Model	374
12.4.2	Complete Mixing Flow Model	377
12.5	Tube-Wire Electrostatic Precipitators (ESPs)	379
12.5.1	Particle Collection in Laminar Flow.....	379

12.5.2	Particle Collection in Complete Mixing Flow (High Turbulent Intensity)	382
12.6	Design of ESP	385
12.6.1	Design Considerations.....	385
12.6.2	Integration into Plant Systems	389
12.6.3	Typical Configurations of ESPs.....	390
	Discussion Topics	392
	Problems	393
	References.....	395
Chapter 13	Control of Gaseous Pollutants.....	397
13.1	Gas Control Mechanisms	397
13.1.1	Adsorption	398
13.1.2	Absorption	399
13.1.3	Sorption	400
13.1.4	Catalytic Conversion	400
13.2	Adsorption Principles	400
13.2.1	Adsorption Isotherm.....	401
13.3	Adsorption Wave.....	403
13.4	Regeneration of Adsorbents	410
13.5	Design Considerations for Adsorption Processes	412
13.6	Absorption Principles	414
13.7	Mass Balance for Wet Scrubbers	415
13.7.1	Henry's Law and Gas-Liquid Equilibrium	415
13.8	Single-Stage Counterflow Gas-Liquid System.....	419
13.9	Multistage Counterflow Gas-Liquid System	421
13.9.1	Mass Balance of the Multistage System	421
13.9.2	Ideal Number of Stages — Graphical Method.....	424
13.9.3	Ideal Number of Stages — Analytical Method.....	425
13.10	Design of Liquid-Gas Ratio.....	430
13.11	Catalytic Conversion.....	432
13.11.1	Principles of Catalytic Conversion	432
13.11.2	Dispersed Catalyst Components	435
13.11.3	Steps of Heterogeneous Catalysis.....	436
13.11.4	The Arrhenius Equation	438
	Discussion Topics	439
	Problems	439
	References.....	440
Chapter 14	Ventilation Requirements and Measurement	441
14.1	Ventilation Requirements for Completely Mixed Airspaces	442
14.1.1	Mass and Energy Conservation of a Ventilated Airspace	442
14.1.2	Sensible Heat Balance Ventilation Requirement	445
14.1.3	Moisture Balance Ventilation Requirement	446
14.1.4	Pollutant Balance Ventilation Requirement	446
14.1.5	Ventilation Graph	447

14.2	Air Cleaning Efficiency with Recirculation and Filtration	449
14.3	Terminology of Air Age	452
14.4	Tracer Gas Methods for Ventilation Rate Measurement.....	453
14.4.1	Theoretical Analysis	454
14.4.2	The Rate of Decay Method.....	455
14.4.3	The Constant Injection Method	457
14.4.4	The Constant Concentration Method	459
14.5	Tracer Gas Method for Air Age Distribution Measurement.....	460
14.5.1	Three Main Procedures to Determine Air Age Distribution	460
14.6	Calorimetry Method to Estimate Ventilation Rate.....	465
14.6.1	Theory of Transient Calorimetry	465
14.6.2	Application of Calorimetry Method	467
14.7	Effectiveness Coefficient of Mixing.....	468
14.8	Flow Rate Measurement Instrumentation and Procedures	471
14.8.1	Flow Measurement Instrumentation	471
14.8.2	Venturi, Nozzle, and Orifice	473
14.8.3	Turbine (or Vane) Flowmeters	477
14.8.4	Measurement of Large Flow Rates Using a Single Vane Anemometer	477
14.8.5	Airflow-Measurement Hood.....	478
	Discussion Topics	480
	Problems	480
	References.....	483
Chapter 15	Ventilation Effectiveness and Air Distribution.....	485
15.1	Particle Spatial Distribution	486
15.1.1	An Experimental Case Study.....	486
15.1.2	Dust Generation and Measurement	487
15.2	Calculation of Ventilation Effectiveness	492
15.2.1	Ventilation Effectiveness Factor (VEF)	493
15.2.2	Ventilation Effectiveness under Incomplete-Mixing Conditions.....	495
15.2.3	Ventilation Effectiveness under Zonal Ventilation Conditions.....	497
15.2.4	Ventilation Effectiveness Map (VEM).....	497
15.3	Governing Equations for Room Air Distribution Modeling	498
15.3.1	The Spalart-Allmaras Model	499
15.3.2	The Standard k - ϵ Model.....	500
15.3.3	The RNG k - ϵ Model	501
15.3.4	The Realizable k - ϵ Model	503
15.3.5	The Standard k - ω Model.....	505
15.3.6	The Shear-Stress Transport (SST) k - ω Model.....	506
15.3.7	The Reynolds Stress Model (RSM).....	506
15.3.8	The Large Eddy Simulation (LES) Model	507
15.3.9	Measurement Results	509

15.4	Room Air Distribution Measurement.....	511
15.4.1	Thermal Anemometers	512
15.4.2	Laser Doppler Velocimetry	513
15.4.3	Flow Visualization	514
15.4.4	Particle Image Velocimetry	514
15.5	Room Air Distribution Measurement using SPIV	516
15.5.1	SPIV System	517
15.5.2	SPIV Algorithm.....	518
15.5.3	Determination of Velocity Magnitude and Direction	522
15.5.4	Examples of Room Air Distribution Measurements	525
15.6	Air Leakage	527
15.6.1	Comparison of Literature Data on Air Leakage.....	530
15.6.2	Analysis of Air Infiltration.....	531
15.7	Alternative Ventilation and Air Distribution Systems.....	533
15.7.1	Effect of Outlet Location on Dust Spatial Distribution	534
15.7.2	Effect of Inlet Location on Dust Spatial Distribution.....	534
15.7.3	Effect of Air Cleaning on Dust Spatial Distribution.....	537
	Discussion Topics	539
	Problems	539
	References.....	540
Appendix 1	Conversion Factors and Constants	543
Appendix 2	Airborne Particle Properties at Standard Conditions	547
Appendix 3	K_p Values for Equation 3.41:	551
Appendix 4	Threshold Limit Values for Indoor Air Pollutants	555
	Endnotes and Abbreviations	576
Appendix 5	Thermal Physical Properties of Gases	577
	Diffusion Coefficients for More Gases	582
Appendix 6	Permittivity (Dielectric Constant) of Gases	585
	Permittivity of Saturated Water Vapor	587
Appendix 7	Psychrometric Chart at Sea Level.....	589
Appendix 8	Correlation Constants of Activated Carbon for VOC Adsorption.....	593
Index.....		603
