

OXFORD

# MOLECULAR QUANTUM MECHANICS

FOURTH EDITION

PETER ATKINS  
RONALD FRIEDMAN

# Detailed Contents

<b>Introduction and orientation</b>	<b>1</b>	<b>The plausibility of the Schrödinger equation</b>	<b>36</b>
0.1 Black-body radiation	1	1.22 The propagation of light	36
0.2 Heat capacities	3	1.23 The propagation of particles	38
0.3 The photoelectric and Compton effects	4	1.24 The transition to quantum mechanics	39
0.4 Atomic spectra	5	<b>PROBLEMS</b>	<b>40</b>
0.5 The duality of matter	6	<b>2 Linear motion and the harmonic oscillator</b>	<b>43</b>
<b>PROBLEMS</b>	<b>8</b>		
<b>1 The foundations of quantum mechanics</b>	<b>9</b>	<b>The characteristics of acceptable wavefunctions</b>	<b>43</b>
<b>Operators in quantum mechanics</b>	<b>9</b>	<b>Some general remarks on the Schrödinger equation</b>	<b>44</b>
1.1 Linear operators	10	2.1 The curvature of the wavefunction	45
1.2 Eigenfunctions and eigenvalues	10	2.2 Qualitative solutions	45
1.3 Representations	12	2.3 The emergence of quantization	46
1.4 Commutation and non-commutation	13	2.4 Penetration into non-classical regions	46
1.5 The construction of operators	14	<b>Translational motion</b>	<b>47</b>
1.6 Integrals over operators	15	2.5 Energy and momentum	48
1.7 Dirac bracket notation	16	2.6 The significance of the coefficients	48
1.8 Hermitian operators	17	2.7 The flux density	49
<b>The postulates of quantum mechanics</b>	<b>19</b>	2.8 Wavepackets	50
1.9 States and wavefunctions	19	<b>Penetration into and through barriers</b>	<b>51</b>
1.10 The fundamental prescription	20	2.9 An infinitely thick potential wall	51
1.11 The outcome of measurements	20	2.10 A barrier of finite width	52
1.12 The interpretation of the wavefunction	22	2.11 The Eckart potential barrier	54
1.13 The equation for the wavefunction	23	<b>Particle in a box</b>	<b>55</b>
1.14 The separation of the Schrödinger equation	23	2.12 The solutions	56
<b>The specification and evolution of states</b>	<b>25</b>	2.13 Features of the solutions	57
1.15 Simultaneous observables	25	2.14 The two-dimensional square well	58
1.16 The uncertainty principle	27	2.15 Degeneracy	59
1.17 Consequences of the uncertainty principle	29	<b>The harmonic oscillator</b>	<b>60</b>
1.18 The uncertainty in energy and time	30	2.16 The solutions	61
1.19 Time-evolution and conservation laws	30	2.17 Properties of the solutions	63
<b>Matrices in quantum mechanics</b>	<b>32</b>	2.18 The classical limit	65
1.20 Matrix elements	32	<b>Translation revisited: The scattering matrix</b>	<b>66</b>
1.21 The diagonalization of the hamiltonian	34	<b>PROBLEMS</b>	<b>68</b>

<b>3 Rotational motion and the hydrogen atom</b>	<b>71</b>	<b>The angular momenta of composite systems</b>	<b>112</b>
<b>Particle on a ring</b>	<b>71</b>	4.9 The specification of coupled states	112
3.1 The hamiltonian and the Schrödinger equation	71	4.10 The permitted values of the total angular momentum	113
3.2 The angular momentum	73	4.11 The vector model of coupled angular momenta	115
3.3 The shapes of the wavefunctions	74	4.12 The relation between schemes	117
3.4 The classical limit	76	4.13 The coupling of several angular momenta	119
<b>Particle on a sphere</b>	<b>76</b>	<b>PROBLEMS</b>	<b>120</b>
3.5 The Schrödinger equation and its solution	76	<b>5 Group theory</b>	<b>122</b>
3.6 The angular momentum of the particle	79	<b>The symmetries of objects</b>	<b>122</b>
3.7 Properties of the solutions	81	5.1 Symmetry operations and elements	123
3.8 The rigid rotor	82	5.2 The classification of molecules	124
<b>Motion in a Coulombic field</b>	<b>84</b>	<b>The calculus of symmetry</b>	<b>129</b>
3.9 The Schrödinger equation for hydrogenic atoms	84	5.3 The definition of a group	129
3.10 The separation of the relative coordinates	85	5.4 Group multiplication tables	130
3.11 The radial Schrödinger equation	85	5.5 Matrix representations	131
3.12 Probabilities and the radial distribution function	90	5.6 The properties of matrix representations	135
3.13 Atomic orbitals	91	5.7 The characters of representations	137
3.14 The degeneracy of hydrogenic atoms	94	5.8 Characters and classes	138
<b>PROBLEMS</b>	<b>96</b>	5.9 Irreducible representations	139
<b>4 Angular momentum</b>	<b>98</b>	5.10 The great and little orthogonality theorems	142
<b>The angular momentum operators</b>	<b>98</b>	<b>Reduced representations</b>	<b>145</b>
4.1 The operators and their commutation relations	99	5.11 The reduction of representations	146
4.2 Angular momentum observables	101	5.12 Symmetry-adapted bases	147
4.3 The shift operators	101	<b>The symmetry properties of functions</b>	<b>151</b>
<b>The definition of the states</b>	<b>102</b>	5.13 The transformation of $p$ -orbitals	151
4.4 The effect of the shift operators	102	5.14 The decomposition of direct-product bases	152
4.5 The eigenvalues of the angular momentum	104	5.15 Direct-product groups	155
4.6 The matrix elements of the angular momentum	106	5.16 Vanishing integrals	157
4.7 The angular momentum eigenfunctions	108	5.17 Symmetry and degeneracy	159
4.8 Spin	110	<b>The full rotation group</b>	<b>161</b>
		5.18 The generators of rotations	161
		5.19 The representation of the full rotation group	162
		5.20 Coupled angular momenta	164
		<b>Applications</b>	<b>165</b>
		<b>PROBLEMS</b>	<b>166</b>

<b>6 Techniques of approximation</b>	<b>168</b>	7.10 The spectrum of helium	224
<b>Time-independent perturbation theory</b>	168	7.11 The Pauli principle	225
6.1 Perturbation of a two-level system	169	<b>Many-electron atoms</b>	229
6.2 Many-level systems	171	7.12 Penetration and shielding	229
6.3 The first-order correction to the energy	172	7.13 Periodicity	231
6.4 The first-order correction to the wavefunction	174	7.14 Slater atomic orbitals	233
6.5 The second-order correction to the energy	175	7.15 Self-consistent fields	234
6.6 Comments on the perturbation expressions	176	7.16 Term symbols and transitions of many-electron atoms	236
6.7 The closure approximation	178	7.17 Hund's rules and the relative energies of terms	239
6.8 Perturbation theory for degenerate states	180	7.18 Alternative coupling schemes	240
<b>Variation theory</b>	183	<b>Atoms in external fields</b>	242
6.9 The Rayleigh ratio	183	7.19 The normal Zeeman effect	242
6.10 The Rayleigh–Ritz method	185	7.20 The anomalous Zeeman effect	243
<b>The Hellmann–Feynman theorem</b>	187	7.21 The Stark effect	245
<b>Time-dependent perturbation theory</b>	189	<b>PROBLEMS</b>	246
6.11 The time-dependent behaviour of a two-level system	189	<b>8 An introduction to molecular structure</b>	<b>249</b>
6.12 The Rabi formula	192	<b>The Born–Oppenheimer approximation</b>	249
6.13 Many-level systems: the variation of constants	193	8.1 The formulation of the approximation	250
6.14 The effect of a slowly switched constant perturbation	195	8.2 An application: the hydrogen molecule-ion	251
6.15 The effect of an oscillating perturbation	197	<b>Molecular orbital theory</b>	253
6.16 Transition rates to continuum states	199	8.3 Linear combinations of atomic orbitals	253
6.17 The Einstein transition probabilities	200	8.4 The hydrogen molecule	258
6.18 Lifetime and energy uncertainty	203	8.5 Configuration interaction	259
<b>PROBLEMS</b>	204	8.6 Diatomic molecules	261
<b>7 Atomic spectra and atomic structure</b>	<b>207</b>	8.7 Heteronuclear diatomic molecules	265
<b>The spectrum of atomic hydrogen</b>	207	<b>Molecular orbital theory of polyatomic molecules</b>	266
7.1 The energies of the transitions	208	8.8 Symmetry-adapted linear combinations	266
7.2 Selection rules	209	8.9 Conjugated $\pi$ -systems	269
7.3 Orbital and spin magnetic moments	212	8.10 Ligand field theory	274
7.4 Spin-orbit coupling	214	8.11 Further aspects of ligand field theory	276
7.5 The fine-structure of spectra	216	<b>The band theory of solids</b>	278
7.6 Term symbols and spectral details	217	8.12 The tight-binding approximation	279
7.7 The detailed spectrum of hydrogen	218	8.13 The Kronig–Penney model	281
<b>The structure of helium</b>	219	8.14 Brillouin zones	284
7.8 The helium atom	219	<b>PROBLEMS</b>	285
7.9 Excited states of helium	222		

<b>9 The calculation of electronic structure</b>	<b>287</b>		
<b>The Hartree–Fock self-consistent field method</b>	288		
9.1 The formulation of the approach	288		
9.2 The Hartree–Fock approach	289		
9.3 Restricted and unrestricted Hartree–Fock calculations	291		
9.4 The Roothaan equations	293		
9.5 The selection of basis sets	296		
9.6 Computational accuracy and the basis set	301		
<b>Electron correlation</b>	302		
9.7 Configuration state functions	303		
9.8 Configuration interaction	303		
9.9 CI calculations	305		
9.10 Multiconfiguration and multireference methods	308		
9.11 Møller–Plesset many-body perturbation theory	310		
9.12 The coupled-cluster method	313		
<b>Density functional theory</b>	316		
9.13 Kohn–Sham orbitals and equations	317		
9.14 Exchange–correlation functionals	319		
<b>Gradient methods and molecular properties</b>	321		
9.15 Energy derivatives and the Hessian matrix	321		
9.16 Analytical derivatives and the coupled perturbed equations	322		
<b>Semiempirical methods</b>	325		
9.17 Conjugated $\pi$ -electron systems	326		
9.18 Neglect of differential overlap	329		
<b>Molecular mechanics</b>	332		
9.19 Force fields	333		
9.20 Quantum mechanics–molecular mechanics	334		
<b>Software packages for electronic structure calculations</b>	336		
<b>PROBLEMS</b>	339		
<b>10 Molecular rotations and vibrations</b>	<b>342</b>		
<b>Spectroscopic transitions</b>	342		
10.1 Absorption and emission	342		
10.2 Raman processes	344		
<b>Molecular rotation</b>	344		
10.3 Rotational energy levels	345		
10.4 Centrifugal distortion	349		
10.5 Pure rotational selection rules	349		
10.6 Rotational Raman selection rules	351		
10.7 Nuclear statistics	353		
<b>The vibrations of diatomic molecules</b>	357		
10.8 The vibrational energy levels of diatomic molecules	357		
10.9 Anharmonic oscillation	359		
10.10 Vibrational selection rules	360		
10.11 Vibration–rotation spectra of diatomic molecules	362		
10.12 Vibrational Raman transitions of diatomic molecules	364		
<b>The vibrations of polyatomic molecules</b>	365		
10.13 Normal modes	365		
10.14 Vibrational selection rules for polyatomic molecules	368		
10.15 Group theory and molecular vibrations	369		
10.16 The effects of anharmonicity	373		
10.17 Coriolis forces	376		
10.18 Inversion doubling	377		
<b>Appendix 10.1 Centrifugal distortion</b>	379		
<b>PROBLEMS</b>	380		
<b>11 Molecular electronic transitions</b>	<b>382</b>		
<b>The states of diatomic molecules</b>	382		
11.1 The Hund coupling cases	382		
11.2 Decoupling and $A$ -doubling	384		
11.3 Selection rules	386		
<b>Vibronic transitions</b>	386		
11.4 The Franck–Condon principle	386		
11.5 The rotational structure of vibronic transitions	389		
<b>The electronic spectra of polyatomic molecules</b>	390		
11.6 Symmetry considerations	391		
11.7 Chromophores	391		
11.8 Vibronically allowed transitions	393		
11.9 Singlet–triplet transitions	395		
<b>The fate of excited species</b>	396		
11.10 Non-radiative decay	396		

11.11 Radiative decay	397	<b>Magnetic resonance parameters</b>	452
11.12 The conservation of orbital symmetry	399	13.11 Shielding constants	452
11.13 Electrocyclic reactions	399	13.12 The diamagnetic contribution to shielding	456
11.14 Cycloaddition reactions	401	13.13 The paramagnetic contribution to shielding	458
11.15 Photochemically induced electrocyclic reactions	403	13.14 The <i>g</i> -value	459
11.16 Photochemically induced cycloaddition reactions	404	13.15 Spin–spin coupling	462
<b>PROBLEMS</b>	406	13.16 Hyperfine interactions	463
<b>12 The electric properties of molecules</b>	<b>407</b>	13.17 Nuclear spin–spin coupling	467
<hr/>		<b>PROBLEMS</b>	471
<b>The response to electric fields</b>	407	<b>14 Scattering theory</b>	<b>473</b>
12.1 Molecular response parameters	407	<hr/>	
12.2 The static electric polarizability	409	<b>The formulation of scattering events</b>	473
12.3 Polarizability and molecular properties	411	14.1 The scattering cross-section	473
12.4 Polarizabilities and molecular spectroscopy	413	14.2 Stationary scattering states	475
12.5 Polarizabilities and dispersion forces	414	<b>Partial-wave stationary scattering states</b>	479
12.6 Retardation effects	418	14.3 Partial waves	479
<b>Bulk electrical properties</b>	418	14.4 The partial-wave equation	480
12.7 The relative permittivity and the electric susceptibility	418	14.5 Free-particle radial wavefunctions and the scattering phase shift	481
12.8 Polar molecules	420	14.6 The JWKB approximation and phase shifts	484
12.9 Refractive index	422	14.7 Phase shifts and the scattering matrix element	486
<b>Optical activity</b>	427	14.8 Phase shifts and scattering cross-sections	488
12.10 Circular birefringence and optical rotation	427	14.9 Scattering by a spherical square well	490
12.11 Magnetically induced polarization	429	14.10 Background and resonance phase shifts	492
12.12 Rotational strength	431	14.11 The Breit–Wigner formula	494
<b>PROBLEMS</b>	434	14.12 Resonance contributions to the scattering matrix element	495
<b>13 The magnetic properties of molecules</b>	<b>436</b>	<b>Multichannel scattering</b>	497
<hr/>		14.13 Channels for scattering	497
<b>The descriptions of magnetic fields</b>	436	14.14 Multichannel stationary scattering states	498
13.1 The magnetic susceptibility	436	14.15 Inelastic collisions	498
13.2 Paramagnetism	437	14.16 The <i>S</i> matrix and multichannel resonances	501
13.3 Vector functions	439	<b>The Green’s function</b>	502
13.4 Derivatives of vector functions	440	14.17 The integral scattering equation and Green’s functions	502
13.5 The vector potential	441	14.18 The Born approximation	504
<b>Magnetic perturbations</b>	442	<b>Appendix 14.1 The derivation of the Breit–Wigner formula</b>	508
13.6 The perturbation hamiltonian	442	<b>Appendix 14.2 The rate constant for reactive scattering</b>	509
13.7 The magnetic susceptibility	444	<b>PROBLEMS</b>	510
13.8 The current density	447		
13.9 The diamagnetic current density	450		
13.10 The paramagnetic current density	451		

<b>Further information</b>	<b>513</b>	15 Vector coupling coefficients	535
