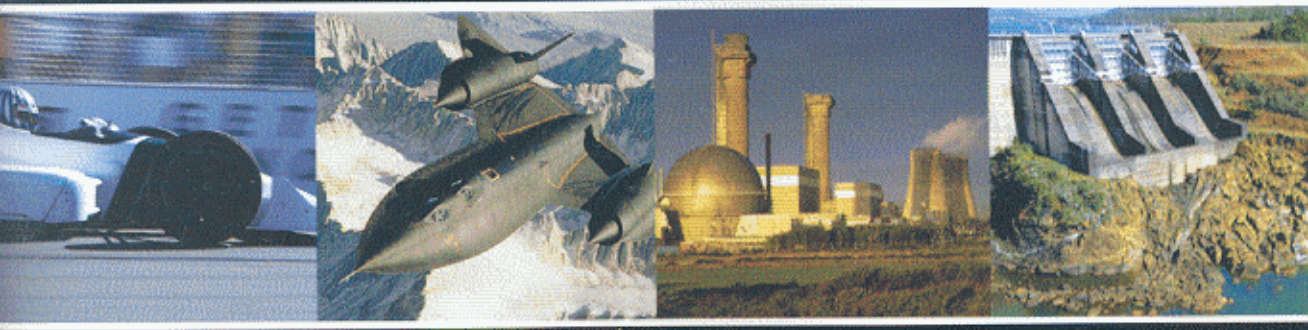
An Engineer's Guide to MATLAB®



with Applications from Mechanical, Aerospace, Electrical, and Civil Engineering

SECOND EDITION

Edward B. Magrab • Shapour Azarm • Balakumar Balachandran
James H. Duncan • Keith E. Herold • Gregory C. Walsh

Contents

List of Examples *xv*

Preface to Second Edition *xxi*

Preface to First Edition *xxiii*

1 Introduction *1*
Edward B. Magrab

1.1 Introduction 1
1.2 The MATLAB Environment 2
1.3 Ways to Use MATLAB 3
1.3.1 Preliminaries—Command Window Management 3
1.3.2 Executing Expressions from the MATLAB Command Window—Basic MATLAB Syntax 6
1.3.3 Creating Scripts and Executing Them from the MATLAB Editor 14
1.4 Online Help 20
1.5 Some Suggestions on How to Use MATLAB 21
1.6 Organization of the Book and Its Goals 22
1.7 Summary of Functions Introduced 22
Exercises 23

2 Matrices and MATLAB *28*
Edward B. Magrab

2.1 Introduction 28
2.2 Definitions of Matrices and Vectors 29
2.3 Creation of Vectors 30
2.4 Creation of Matrices 39
2.5 Dot Operations 53
2.6 Mathematical Operations with Matrices 61
2.6.1 Addition and Subtraction 62
2.6.2 Multiplication 62
2.6.3 Determinants 70
2.6.4 Matrix Inverse 73
2.6.5 Solution of a System of Equations 74
2.7 Summary of Functions Introduced 77
Exercises 78

3 Data Input/Output **87**
Edward B. Magrab

3.1 Strings and Annotated Output 87
3.1.1 Creating Strings 87
3.1.2 Converting Numerical Values to Strings and Displaying Them 90
3.2 Entering Data with `input` 94
3.2.1 Entering a Scalar 94
3.2.2 Entering a String 95
3.2.3 Entering a Vector 96
3.2.4 Entering a Matrix 96
3.3 Input/Output Data Files 96
3.4 Cell Arrays 99
3.5 Input Microsoft Excel™ Files 101
3.6 Summary of Functions Introduced 103
Exercises 103

4 Program Flow Control **105**
Edward B. Magrab

4.1 Introduction—The Logical Operator 105
4.2 Control of Program Flow 107
4.2.1 Branching— `If` Statement 107
4.2.2 Branching—`Switch` Statement 109
4.2.3 `For` Loop 111
4.2.4 `While` Loop 117
4.2.5 Early Termination of Either a `for` or a `while` Loop 119
4.3 Summary of Functions Introduced 119
Exercises 120

5 Functions **122**
Edward B. Magrab

5.1 Introduction 123
5.1.1 Why Use Functions? 123
5.1.2 Naming Functions 123
5.1.3 Length of Functions 124
5.1.4 Debugging Functions 124
5.2 Creating Functions 124
5.2.1 Introduction 124
5.2.2 Function File 125
5.2.3 `inline` 131
5.2.4 Sub Functions 132
5.3 User-Defined Functions, Function Handles, and `feval` 133
5.4 MATLAB Functions that Operate on Arrays of Data 135
5.4.1 Introduction 135
5.4.2 Fitting Data with Polynomials—`polyfit/polyval` 135

5.4.3 Fitting Data with `spline` 137
5.4.4 Interpolation of Data—`interp1` 138
5.4.5 Numerical Integration—`trapz` 139
5.4.6 Digital Signal Processing—`fft` and `ifft` 142
5.5 MATLAB Functions that Require User-Created Functions 147
5.5.1 Zeros of Functions—`fzero` and `roots/poly` 148
5.5.2 Numerical Integration—`quadl` and `dblquad` 153
5.5.3 Numerical Solutions of Ordinary Differential Equations—`ode45` 156
5.5.4 Numerical Solutions of Ordinary Differential Equations—`bvp4c` 162
5.5.5 Minimum of a Function—`fminbnd` 166
5.5.6 Numerical Solutions of Nonlinear Equations—`fsolve` 168
5.6 The Symbolic Toolbox and the Creation of Functions 170
5.7 Summary of Functions Introduced 179
Exercises 181

6 *2D Graphics* **194**
Edward B. Magrab

6.1 Introduction 194
6.2 Basic 2D Plotting Commands 198
6.2.1 Points 199
6.2.2 Lines 199
6.2.3 Circles 201
6.2.4 Family of Curves 203
6.2.5 Multiple Functions Plotted on One Figure 204
6.2.6 Changing Graph Appearance 205
6.2.7 Some Special-Purpose Graphs 208
6.3 Graph Annotations and Visual Enhancement 211
6.3.1 Introduction 211
6.3.2 Axes and Curve Labels, Figure Titles, Legends, and Text 211
6.3.3 Filling in Areas 214
6.3.4 Greek Letters, Mathematical Symbols, Subscripts, and Superscripts 218
6.3.5 Altering the Attributes of Axes, Curves, and Text 220
6.4 Summary of Functions Introduced 231
Exercises 232

7 *3D Graphics* **244**
Edward B. Magrab

7.1 Lines in 3D 244
7.2 Surfaces 247
7.3 Summary of Functions Introduced 266
Exercises 266

8 Design of Machine Elements **274**
Edward B. Magrab

8.1 Vectors, Forces, and the Equilibrium of Rigid Bodies 275
8.2 Stresses and Deflections in Beams, Columns, and Shafts 283
8.2.1 Statically Determinate Beams 283
8.2.2 Buckling of Columns 293
8.2.3 Shafts Subjected to Alternating Loads 295
8.3 Stresses in Spur Gears 300
8.4 Kinematics of a Four-Bar Linkage 308
8.4.1 Position and Velocity of the Links 308
8.4.2 Synthesis of a Four-Bar Linkage 312
8.5 Cam Profiles and Synthesis 315
8.5.1 Cam Displacement 315
8.5.2 Translating Flat-Face Follower 317
8.5.3 Translating Offset Roller Follower 320
8.5.4 Cam Radius of Curvature 322
8.6 Hydrodynamic Bearings 323
8.7 PDE Toolbox and the Stress Concentration Factor for Notches in a Thin Plate 327
8.8 Summary of Functions Introduced 336
Exercises 337
Bibliography 346

9 Dynamics and Vibrations **347**
Balakumar Balachandran

9.1 Orbital Motions 348
9.2 Single-Degree-of-Freedom Systems 350
9.2.1 Introduction 350
9.2.2 Free Oscillations of Linear Systems 352
9.2.3 Free Oscillations of Nonlinear Systems 357
9.2.4 Forced Oscillations of Linear and Nonlinear Systems 365
9.2.5 Frequency Response and the Responses to Step and Impulse Excitations 368
9.2.6 Machine Tool Chatter 376
9.3 Multi-degree-of-Freedom Systems 378
9.3.1 Free Oscillations 378
9.3.2 Forced Oscillations and the Vibration Absorber 383
9.4 Vibrations of Thin Beams 390
9.4.1 Natural Frequencies and Mode Shapes of Beams with Uniform Cross-Section 390
9.4.2 Forced Vibrations of Beams 398
9.4.3 Beams with Variable Cross-Section 399
9.4.4 Beam Carrying a Concentrated Mass 402

9.5 Summary of Functions Introduced 406
Exercises 407
Bibliography 414

10 Control Systems **415**
Gregory C. Walsh

10.1 Introduction to Control System Design 416
10.1.1 Tools for Controller Design 417
10.1.2 Naming and File Conventions 418
10.2 Representation of Systems in MATLAB 418
10.2.1 State-Space Models 420
10.2.2 Transfer-Function Representation 425
10.2.3 Discrete-Time Models 428
10.2.4 Block Diagrams and SIMULINK 431
10.2.5 Conversion Between Representations 436
10.3 Response of Systems 437
10.3.1 Estimating Response from Systems 437
10.3.2 Estimating Response from Poles and Zeros 440
10.3.3 Estimating Systems from Response 448
10.4 Design Tools 450
10.4.1 Design Criteria 451
10.4.2 Design Tools 454
10.5 Design Examples 463
10.5.1 Notch Control of a Flexible Pointer 464
10.5.2 PID Control of a Magnetic Suspension System 472
10.5.3 Lead Control of an Inverted Pendulum 478
10.5.4 Control of a Magnetically Suspended Flywheel 486
10.6 Summary of Functions Introduced 494
Exercises 496
Bibliography 503

11 Fluid Mechanics **504**
James H. Duncan

11.1 Hydrostatics 504
11.1.1 Pressure Distribution in the Standard Atmosphere 505
11.1.2 Force on a Planar Gate 506
11.2 Internal Viscous Flow 510
11.2.1 Laminar Flow in a Horizontal Pipe with Various Cross-Sections 511
11.2.2 Downward Flow in a Vertical Pipe 513
11.2.3 Three-Reservoir Problem 515
11.3 External Flow 517
11.3.1 Boundary Layer on an Infinite Plate Started Suddenly from Rest 517

11.3.2 Blasius Boundary Layer 519
11.3.3 Incompressible Potential Flow 522
11.3.4 Joukowski Airfoils 528
11.4 Open-Channel Flow 534
11.5 Summary of Functions Introduced 539
Exercises 539
Bibliography 553

12 Heat Transfer **554**
Keith E. Herold

12.1 Conduction Heat Transfer 555
12.1.1 Transient Heat Conduction in a Semi-Infinite Slab with Surface Convection 555
12.1.2 Transient Heat Conduction in an Infinite Solid Cylinder with Convection 557
12.1.3 Transient One-Dimensional Conduction with a Heat Source 559
12.2 Sizing of Shell and Tube Heat Exchangers 562
12.3 Convection Heat Transfer 571
12.3.1 Thermal Boundary Layer on a Flat Plate—Similarity Solution 571
12.3.2 Natural Convection Similarity Solution 575
12.3.3 Temperature Distribution in a Printed Circuit Board 580
12.4 Radiation Heat Transfer 584
12.4.1 Radiation View Factor—Differential Area to Arbitrary Rectangle in Parallel Planes 584
12.4.2 View Factor Between Two Rectangles in Parallel Planes 587
12.4.3 Enclosure Radiation with Diffuse Gray Walls 589
12.4.4 Transient Radiation Heating of a Plate in a Furnace 592
Exercises 595
Bibliography 602

13 Optimization **603**
Shapour Azarm

13.1 Definition, Formulation, and Graphical Solutions 603
13.1.1 Introduction 603
13.1.2 Graphical Solution 605
13.2 Linear Programming 607
13.3 Nonlinear Programming 609
13.3.1 Unconstrained Methods 609
13.3.2 Fitting Curves to Data 612
13.3.3 Least Squares 614
13.4 Single-Objective Constrained Methods 618
13.4.1 Constrained Single-Variable Method 618
13.4.2 Constrained Multiple-Variable Method 620

13.4.3 Quadratic Programming 628
13.4.4 Semi-Infinitely Constrained Method 629
13.5 Multiobjective Optimization 633
13.6 Summary of Functions Introduced 638
Exercises 639
Bibliography 652

14 *Engineering Statistics* **653**
Edward B. Magrab

14.1 Descriptive Statistical Quantities 653
14.2 Probability Distributions 659
14.2.1 Discrete Distributions 659
14.2.2 Continuous Distributions 663
14.3 Confidence Intervals 672
14.4 Hypothesis Testing 675
14.5 Linear Regression 679
14.5.1 Simple Linear Regression 679
14.5.2 Multiple Linear Regression 683
14.6 Design of Experiments 688
14.6.1 Single-Factor Experiments: Analysis of Variance 688
14.6.2 Multiple-Factor Experiments 691
14.7 Summary of Functions Introduced 701
Exercises 703
Bibliography 711

Index **713**
