

AN ADVANCED COURSE IN
DATABASE SYSTEMS

Beyond Relational Databases

SUZANNE W. DIETRICH
SUSAN D. URBAN

Contents

List of Figures	x
List of Tables	xiv
Preface	xv
1 Enhanced Entity Relationship Modeling	1
1.1 Entity Relationship Review	2
1.1.1 Notational Conventions	4
1.1.2 Relationship Constraints	9
1.1.3 Checkpoint: ER Modeling	12
1.2 Generalization and Specialization	15
1.2.1 Forming Class Hierarchies	15
1.2.2 Constraints on Specialization	18
1.2.3 Attribute-Defined Specialization	20
1.2.4 Multiple Inheritance	22
1.2.5 Checkpoint: Generalization and Specialization	23
1.3 Categories and Categorization	25
1.4 Checkpoint	27
1.5 Bibliographic References	29
2 The Unified Modeling Language Conceptual Class Diagrams	31
2.1 UML Classes	33
2.2 Generalization and Specialization	37
2.2.1 Forming Class Hierarchies in UML	38
2.2.2 Abstract and Concrete Classes	41
2.2.3 Checkpoint: Generalization and Specialization	43
2.3 Associations	45
2.3.1 Basic Associations	45
2.3.2 Association Classes and Reified Associations	47
2.3.3 N-ary Associations	50
2.3.4 Checkpoint: Associations	50
2.4 Additional Forms of Association	53
2.4.1 Navigability in Associations	54

2.4.2	Aggregation Associations	55
2.4.3	Composition Associations	55
2.4.4	Qualified Associations	56
2.4.5	The Xor Constraint on Associations	57
2.4.6	Checkpoint: Additional Forms of Association	58
2.5	Realization and Interface Classes	61
2.6	Checkpoint	63
2.7	Bibliographic References	63
3	The SQL Standard: Advanced Relational Features	67
3.1	Review of Data Definition and Data Manipulation	68
3.1.1	Data Definition Language	69
3.1.2	Data Manipulation Language: Inserting, Deleting, and Updating Data	75
3.1.3	Views	76
3.1.4	Assertions	78
3.1.5	Checkpoint: DDL, DML, Views, and Assertions	79
3.2	SQL-Invoked Routines	84
3.3	Persistent Stored Modules	86
3.4	Active Capability with Triggers	92
3.5	Embedded SQL	96
3.6	Dynamic SQL	97
3.7	Call-Level Interface	98
3.8	Checkpoint	99
3.9	Bibliographic References	101
4	Mapping Object-Oriented Conceptual Models to the Relational Data Model	103
4.1	Notation and Terminology	104
4.2	Classes	105
4.3	Associations	106
4.3.1	Bidirectional Binary Associations	107
4.3.2	Participation and Multiplicity Constraints	109
4.3.3	Recursive Associations	112
4.3.4	N-ary Associations	113
4.3.5	Navigation of Unidirectional Binary Associations	114
4.3.6	Weak Entities and Identifying Relationships	116
4.3.7	Checkpoint: Classes and Associations	118
4.4	Class Hierarchies	119
4.4.1	Creating a Table for Each Class	121
4.4.2	Creating a Table for Subclasses Only	123
4.4.3	Flattening the Hierarchy	124
4.4.4	Specialization Constraints	126
4.4.5	Checkpoint: Class Hierarchies	128
4.5	Shared Subclasses	131
4.6	Categories	132

4.7	Checkpoint	133
4.8	Bibliographic References	135
5	JDBC and Web Access to Relational Databases	137
5.1	Overview and Architecture	138
5.2	Database-Driven Dynamic Web Pages	138
5.3	The JDBC API	140
5.3.1	Connecting to the Database	140
5.3.2	Querying the Database	141
5.3.3	Updating the Database	144
5.3.4	Metadata	145
5.4	Checkpoint	148
5.5	Bibliographic References	150
6	XML and Databases	151
6.1	HTML	152
6.2	Overview of XML	153
6.3	DTD	155
6.3.1	DTD Declarations	155
6.3.2	DTDs and Relational Databases	158
6.3.3	Checkpoint: DTD	159
6.4	XML Schema	160
6.4.1	Simple Types	161
6.4.2	Complex Types	163
6.4.3	XML Schema and Relational Databases	167
6.4.4	Checkpoint: XML Schema	169
6.5	Data Exchange	169
6.5.1	Access to Oracle	171
6.5.2	Oracle to Access	172
6.6	Checkpoint	175
6.7	Bibliographic References	175
7	Object-Oriented Databases and the ODMG Standard	177
7.1	A Historical View of Object-Oriented Databases	178
7.2	Fundamental Concepts	179
7.2.1	Object Orientation	180
7.2.2	A Closer Look at Object Identity	182
7.3	The ODMG Standard	184
7.4	The ODMG Object Definition Language	184
7.5	Mapping Object-Oriented Conceptual Models to ODL	186
7.5.1	Classes, Attributes, and Associations	186
7.5.2	Checkpoint: ODL Mapping of Classes, Attributes, and Associations	191
7.5.3	Class Hierarchies	193
7.5.4	Categories	194
7.5.5	Checkpoint: Mapping to ODL	195

7.6	The ODMG Object Query Language	195
7.6.1	Path Expressions	199
7.6.2	OQL Expressions and Query Results	200
7.6.3	Set Membership and Quantification	202
7.6.4	Ordering	203
7.6.5	Using Collections	203
7.6.6	Aggregation and Grouping	204
7.6.7	Checkpoint: OQL	205
7.7	Checkpoint	206
7.8	Bibliographic References	210
8	The SQL Standard: Object-Relational Features	211
8.1	Built-In Constructed Types	213
8.1.1	Row Types	213
8.1.2	Arrays as Collections	214
8.1.3	Checkpoint: Built-In Constructed Types	215
8.2	User-Defined Types	216
8.2.1	Distinct Types	217
8.2.2	Structured Types	218
8.2.3	Checkpoint: User-Defined Types	222
8.3	Typed Tables	222
8.4	Type and Table Hierarchies	225
8.5	A Closer Look at Table Hierarchies	227
8.5.1	Inserting Rows into a Table Hierarchy	227
8.5.2	Querying a Table Hierarchy	228
8.5.3	Deleting Rows from a Table Hierarchy	228
8.5.4	Updating Rows in a Table Hierarchy	230
8.5.5	Checkpoint: Typed Table Hierarchies	231
8.6	Reference Types	232
8.6.1	Scopes and Reference Checking	234
8.6.2	Querying Reference Types	234
8.7	Mapping to the SQL Standard	
	Object-Relational Features	235
8.7.1	Classes, Attributes, and Associations	235
8.7.2	Checkpoint: Object-Relational Mapping of Classes, Attributes, and Associations	243
8.7.3	Class Hierarchies	247
8.7.4	Categories	247
8.8	Checkpoint	248
8.9	Bibliographic References	252
9	Case Studies: Relational, Object-Relational, and Object-Oriented Database Implementations	253
9.1	Oracle: Relational Database Mappings	254
9.1.1	Constraints of the Application	254

9.1.2	Stored Procedures	258
9.1.3	Triggers	259
9.2	Oracle: Object-Relational Database Mappings	261
9.2.1	Object Types	263
9.2.2	Object Tables	267
9.2.3	Reference Types	267
9.2.4	Inheritance	269
9.2.5	Varrays and Nested Tables as Collections	271
9.2.6	Accessing Varrays and Nested Tables	273
9.2.7	Maintaining Inverse Relationships	276
9.3	Objectivity/DB: Object-Oriented Database Mappings	277
9.3.1	Accessing an Objectivity/DB Database	277
9.3.2	Persistence-Capable Classes	282
9.3.3	Relationships for Implementing Associations	285
9.3.4	Additional Features for Implementing Associations	289
9.4	Checkpoint	291
9.5	Bibliographic References	292
	Bibliography	293
	Index	296
