## part one **Tour of Java**

| chapter 1 | primitive java | 3 |
|-----------|----------------|---|
|-----------|----------------|---|

- 1.1 **the general environment** 4
- 1.2 **the first program** 5
  - 1.2.1 comments 5
  - 1.2.2 main 6
  - 1.2.3 terminal output 6
- 1.3 **primitive types** 6
  - 1.3.1 the primitive types 6
  - 1.3.2 constants 7
  - 1.3.3 declaration and initialization of primitive types 7
  - 1.3.4 terminal input and output 8
- 1.4 **basic operators** 8
  - 1.4.1 assignment operators 9
  - 1.4.2 binary arithmetic operators 10
  - 1.4.3 unary operators 10
  - 1.4.4 type conversions 10
- 1.5 **conditional statements** 11
  - 1.5.1 relational and equality operators 11
  - 1.5.2 logical operators 12
  - 1.5.3 the if statement 13
  - 1.5.4 the while statement 14
  - 1.5.5 the for statement 14
  - 1.5.6 the do statement 15

- 1.5.7 break and continue 16
- 1.5.8 the switch statement 17
- 1.5.9 the conditional operator 17

## 1.6 methods 18

- 1.6.1 overloading of method names 19
- 1.6.2 storage classes 20

**summary** 20

**key concepts** 20

**common errors** 22

**on the internet** 23

**exercises** 23

**references** 25

# chapter 2

## reference types

27

### 2.1 what is a reference? 27

### 2.2 basics of objects and references 30

- 2.2.1 the dot operator (.) 30
- 2.2.2 declaration of objects 30
- 2.2.3 garbage collection 31
- 2.2.4 the meaning of = 32
- 2.2.5 parameter passing 33
- 2.2.6 the meaning of == 33
- 2.2.7 no operator overloading for objects 34

### 2.3 strings 35

- 2.3.1 basics of string manipulation 35
- 2.3.2 string concatenation 35
- 2.3.3 comparing strings 36
- 2.3.4 other String methods 36
- 2.3.5 converting other types to strings 37

### 2.4 arrays 37

- 2.4.1 declaration, assignment, and methods 38
- 2.4.2 dynamic array expansion 40
- 2.4.3 ArrayList 43
- 2.4.4 multidimensional arrays 45
- 2.4.5 command-line arguments 46
- 2.4.6 enhanced for loop 46

|                                    |    |
|------------------------------------|----|
| <b>2.5 exception handling</b>      | 48 |
| 2.5.1 processing exceptions        | 48 |
| 2.5.2 the finally clause           | 48 |
| 2.5.3 common exceptions            | 50 |
| 2.5.4 the throw and throws clauses | 51 |
| <b>2.6 input and output</b>        | 51 |
| 2.6.1 basic stream operations      | 52 |
| 2.6.2 the StringTokenizer type     | 53 |
| 2.6.3 sequential files             | 55 |
| <b>summary</b>                     | 58 |
| <b>key concepts</b>                | 58 |
| <b>common errors</b>               | 60 |
| <b>on the internet</b>             | 60 |
| <b>exercises</b>                   | 61 |
| <b>references</b>                  | 62 |

**chapter 3****objects and classes****63**

|  |    |
|--|----|
| <b>3.1 what is object-oriented programming?</b>        | 63 |
| <b>3.2 a simple example</b>                            | 65 |
| <b>3.3 javadoc</b>                                     | 67 |
| <b>3.4 basic methods</b>                               | 70 |
| 3.4.1 constructors                                     | 70 |
| 3.4.2 mutators and accessors                           | 70 |
| 3.4.3 output and <code>toString</code>                 | 72 |
| 3.4.4 <code>equals</code>                              | 72 |
| 3.4.5 <code>main</code>                                | 72 |
| 3.4.6 static fields and methods                        | 72 |
| <b>3.5 additional constructs</b>                       | 73 |
| 3.5.1 the <code>this</code> reference                  | 73 |
| 3.5.2 the <code>this</code> shorthand for constructors | 74 |
| 3.5.3 the <code>instanceof</code> operator             | 74 |
| 3.5.4 instance members versus static members           | 75 |
| 3.5.5 static fields and methods                        | 75 |
| 3.5.6 static initializers                              | 77 |

|   |    |
|---|----|
| <b>3.6 packages</b>                           | 78 |
| 3.6.1 the import directive                    | 78 |
| 3.6.2 the package statement                   | 80 |
| 3.6.3 the CLASSPATH environment variable      | 81 |
| 3.6.4 package visibility rules                | 82 |
| <b>3.7 a design pattern: composite (pair)</b> | 82 |
| <b>summary</b>                                | 83 |
| <b>key concepts</b>                           | 84 |
| <b>common errors</b>                          | 87 |
| <b>on the internet</b>                        | 87 |
| <b>exercises</b>                              | 88 |
| <b>references</b>                             | 91 |

|  |     |
|--|-----|
| <b>4.1 what is inheritance?</b>            | 94  |
| 4.1.1 creating new classes                 | 94  |
| 4.1.2 type compatibility                   | 99  |
| 4.1.3 dynamic dispatch and polymorphism    | 100 |
| 4.1.4 inheritance hierarchies              | 101 |
| 4.1.5 visibility rules                     | 101 |
| 4.1.6 the constructor and super            | 102 |
| 4.1.7 final methods and classes            | 103 |
| 4.1.8 overriding a method                  | 105 |
| 4.1.9 type compatibility revisited         | 105 |
| 4.1.10 compatibility of array types        | 108 |
| 4.1.11 covariant return types              | 108 |
| <b>4.2 designing hierarchies</b>           | 109 |
| 4.2.1 abstract methods and classes         | 110 |
| <b>4.3 multiple inheritance</b>            | 114 |
| <b>4.4 the interface</b>                   | 115 |
| 4.4.1 specifying an interface              | 115 |
| 4.4.2 implementing an interface            | 116 |
| 4.4.3 multiple interfaces                  | 117 |
| 4.4.4 interfaces are abstract classes      | 117 |
| <b>4.5 fundamental inheritance in java</b> | 118 |
| 4.5.1 the Object class                     | 118 |

|  |     |
|--|-----|
| 4.5.2 the hierarchy of exceptions                                  | 119 |
| 4.5.3 i/o: the decorator pattern                                   | 120 |
| <b>4.6 implementing generic components using inheritance</b>       | 124 |
| 4.6.1 using Object for genericity                                  | 124 |
| 4.6.2 wrappers for primitive types                                 | 125 |
| 4.6.3 autoboxing/unboxing  | 127 |
| 4.6.4 adapters: changing an interface                              | 128 |
| 4.6.5 using interface types for genericity                         | 129 |
| <b>4.7 implementing generic components using java 1.5 generics</b> | 131 |
| 4.7.1 simple generic classes and interfaces                        | 131 |
| 4.7.2 wildcards with bounds  | 132 |
| 4.7.3 generic static methods                                       | 133 |
| 4.7.4 type bounds  | 134 |
| 4.7.5 type erasure   | 135 |
| 4.7.6 restrictions on generics                                     | 136 |
| <b>4.8 the functor (function objects)</b>                          | 137 |
| 4.8.1 nested classes   | 142 |
| 4.8.2 local classes  | 143 |
| 4.8.3 anonymous classes  | 144 |
| 4.8.4 nested classes and generics                                  | 145 |
| <b>4.9 dynamic dispatch details</b>                                | 146 |
| summary  | 149 |
| key concepts   | 150 |

## part two **Algorithms and Building Blocks**

**Chapter 5****algorithm analysis****163**

|  |     |
|--|-----|
| <b>5.1 what is algorithm analysis?</b>         | 164 |
| <b>5.2 examples of algorithm running times</b> | 168 |

|   |     |
|---|-----|
| <b>5.3 the maximum contiguous subsequence sum problem</b> | 169 |
| 5.3.1 the obvious $O(N^3)$ algorithm                      | 170 |
| 5.3.2 an improved $O(N^2)$ algorithm                      | 173 |
| 5.3.3 a linear algorithm                                  | 173 |
| <b>5.4 general big-oh rules</b>                           | 177 |
| <b>5.5 the logarithm</b>                                  | 181 |
| <b>5.6 static searching problem</b>                       | 183 |
| 5.6.1 sequential search                                   | 183 |
| 5.6.2 binary search                                       | 184 |
| 5.6.3 interpolation search                                | 187 |
| <b>5.7 checking an algorithm analysis</b>                 | 188 |
| <b>5.8 limitations of big-oh analysis</b>                 | 189 |
| <b>summary</b>  | 190 |
| <b>key concepts</b>                                       | 190 |
| <b>common errors</b>                                      | 191 |
| <b>on the Internet</b>                                    | 192 |
| <b>exercises</b>  | 192 |
| <b>references</b>   | 199 |

## chapter 6 the collections api

201

|  |     |
|--|-----|
| <b>6.1 introduction</b>                              | 202 |
| <b>6.2 the iterator pattern</b>                      | 203 |
| 6.2.1 basic iterator design                          | 204 |
| 6.2.2 inheritance-based iterators and factories      | 206 |
| <b>6.3 collections api: containers and iterators</b> | 208 |
| 6.3.1 the Collection interface                       | 209 |
| 6.3.2 Iterator interface                             | 212 |
| <b>6.4 generic algorithms</b>                        | 214 |
| 6.4.1 Comparator function objects                    | 215 |
| 6.4.2 the Collections class                          | 215 |
| 6.4.3 binary search                                  | 218 |
| 6.4.4 sorting  | 218 |
| <b>6.5 the List interface</b>                        | 220 |
| 6.5.1 the ListIterator interface                     | 221 |
| 6.5.2 LinkedList class                               | 223 |

|  |     |
|--|-----|
| <b>6.6 stacks and queues</b>                   | 225 |
| 6.6.1 stacks                                   | 225 |
| 6.6.2 stacks and computer languages            | 226 |
| 6.6.3 queues                                   | 227 |
| 6.6.4 stacks and queues in the collections api | 228 |
| <b>6.7 sets</b>                                | 228 |
| 6.7.1 the TreeSet class                        | 229 |
| 6.7.2 the HashSet class                        | 231 |
| <b>6.8 maps</b>                                | 236 |
| <b>6.9 priority queues</b>                     | 239 |
| summary  | 243 |
| key concepts                                   | 244 |
| common errors                                  | 245 |
| on the internet                                | 245 |
| exercises                                      | 246 |
| references                                     | 249 |

**Chapter 7****recursion**

251

|  |     |
|--|-----|
| <b>7.1 what is recursion?</b>                                    | 252 |
| <b>7.2 background: proofs by mathematical induction</b>          | 253 |
| <b>7.3 basic recursion</b>                                       | 255 |
| 7.3.1 printing numbers in any base                               | 257 |
| 7.3.2 why it works   | 259 |
| 7.3.3 how it works   | 261 |
| 7.3.4 too much recursion can be dangerous                        | 262 |
| 7.3.5 preview of trees   | 263 |
| 7.3.6 additional examples  | 264 |
| <b>7.4 numerical applications</b>                                | 269 |
| 7.4.1 modular arithmetic   | 269 |
| 7.4.2 modular exponentiation                                     | 270 |
| 7.4.3 greatest common divisor and multiplicative inverses        | 272 |
| 7.4.4 the rsa cryptosystem                                       | 275 |
| <b>7.5 divide-and-conquer algorithms</b>                         | 277 |
| 7.5.1 the maximum contiguous subsequence sum problem             | 278 |
| 7.5.2 analysis of a basic divide-and-conquer recurrence          | 281 |
| 7.5.3 a general upper bound for divide-and-conquer running times | 285 |

|                                |     |
|--------------------------------|-----|
| <b>7.6 dynamic programming</b> | 287 |
| <b>7.7 backtracking</b>        | 291 |
| <b>summary</b>                 | 294 |
| <b>key concepts</b>            | 296 |
| <b>common errors</b>           | 297 |
| <b>on the internet</b>         | 297 |
| <b>exercises</b>               | 298 |
| <b>references</b>              | 302 |

## chapter 8 sorting algorithms 303

|  |     |
|--|-----|
| <b>8.1 why is sorting important?</b>                             | 304 |
| <b>8.2 preliminaries</b>   | 305 |
| <b>8.3 analysis of the insertion sort and other simple sorts</b> | 305 |
| <b>8.4 shellsort</b>   | 309 |
| 8.4.1 performance of shellsort                                   | 310 |
| <b>8.5 mergesort</b>   | 313 |
| 8.5.1 linear-time merging of sorted arrays                       | 313 |
| 8.5.2 the mergesort algorithm                                    | 315 |
| <b>8.6 quicksort</b>   | 316 |
| 8.6.1 the quicksort algorithm                                    | 317 |
| 8.6.2 analysis of quicksort                                      | 320 |
| 8.6.3 picking the pivot  | 323 |
| 8.6.4 a partitioning strategy                                    | 325 |
| 8.6.5 keys equal to the pivot                                    | 327 |
| 8.6.6 median-of-three partitioning                               | 327 |
| 8.6.7 small arrays   | 328 |
| 8.6.8 java quicksort routine                                     | 329 |
| <b>8.7 quickselect</b>   | 331 |
| <b>8.8 a lower bound for sorting</b>                             | 332 |
| <b>summary</b>   | 334 |
| <b>key concepts</b>  | 335 |
| <b>common errors</b>   | 336 |
| <b>on the internet</b>   | 336 |
| <b>exercises</b>   | 336 |
| <b>references</b>  | 341 |

**chapter 9****randomization****343**

- 9.1 why do we need random numbers?** 343
- 9.2 random number generators** 344
- 9.3 nonuniform random numbers** 349
- 9.4 generating a random permutation** 353
- 9.5 randomized algorithms** 354
- 9.6 randomized primality testing** 357
- summary** 360
- key concepts** 360
- common errors** 361
- on the internet** 362
- exercises** 362
- references** 364

**part three Applications****chapter 10****fun and games****367**

- 10.1 word search puzzles** 367

## chapter 21 a priority queue: the binary heap

745

|  |     |
|--|-----|
| <b>21.1 basic ideas</b>  | 746 |
| 21.1.1 structure property  | 746 |
| 21.1.2 heap-order property   | 748 |
| 21.1.3 allowed operations  | 749 |
| <b>21.2 implementation of the basic operations</b>                               | 752 |
| 21.2.1 insertion   | 752 |
| 21.2.2 the <code>deleteMin</code> operation                                      | 754 |
| <b>21.3 the <code>buildHeap</code> operation: linear-time heap construction</b>  | 756 |
| <b>21.4 advanced operations: <code>decreaseKey</code> and <code>merge</code></b> | 761 |
| <b>21.5 internal sorting: heapsort</b>   | 761 |
| <b>21.6 external sorting</b>   | 764 |
| 21.6.1 why we need new algorithms  | 764 |
| 21.6.2 model for external sorting  | 765 |
| 21.6.3 the simple algorithm  | 765 |
| 21.6.4 multiway merge  | 767 |
| 21.6.5 polyphase merge   | 768 |
| 21.6.6 replacement selection   | 770 |

---

## part five Advanced Data Structures

### chapter 22 splay trees 781

|        |   |     |
|--------|---|-----|
| 22.1   | <b>self-adjustment and amortized analysis</b>               | 782 |
| 22.1.1 | amortized time bounds                                       | 783 |
| 22.1.2 | a simple self-adjusting strategy (that does not work)       | 783 |
| 22.2   | <b>the basic bottom-up splay tree</b>                       | 785 |
| 22.3   | <b>basic splay tree operations</b>                          | 788 |
| 22.4   | <b>analysis of bottom-up splaying</b>                       | 789 |
| 22.4.1 | proof of the splaying bound                                 | 792 |
| 22.5   | <b>top-down splay trees</b>                                 | 795 |
| 22.6   | <b>implementation of top-down splay trees</b>               | 798 |
| 22.7   | <b>comparison of the splay tree with other search trees</b> | 803 |
|        | summary   | 804 |
|        | key concepts  | 804 |
|        | common errors   | 805 |
|        | on the internet   | 805 |
|        | exercises   | 805 |
|        | references  | 806 |

### chapter 23 merging priority queues 809

|        |  |     |
|--------|--|-----|
| 23.1   | <b>the skew heap</b>                     | 809 |
| 23.1.1 | merging is fundamental                   | 810 |
| 23.1.2 | simplistic merging of heap-ordered trees | 810 |

|             |  |     |
|-------------|--|-----|
| 23.1.3      | the skew heap: a simple modification                     | 811 |
| 23.1.4      | analysis of the skew heap                                | 812 |
| <b>23.2</b> | <b>the pairing heap</b>                                  | 814 |
| 23.2.1      | pairing heap operations                                  | 815 |
| 23.2.2      | implementation of the pairing heap                       | 816 |
| 23.2.3      | application: dijkstra's shortest weighted path algorithm | 822 |
