

FOURTH EDITION

SYSTEM DYNAMICS

MODELING AND SIMULATION OF
MECHATRONIC SYSTEMS

Dean C. Karnopp • Donald L. Margolis • Ronald C. Rosenberg

CONTENTS

Preface	xi
1 Introduction	1
1.1 Models of Systems, 4	
1.2 Systems, Subsystems, and Components, 5	
1.3 State-Determined Systems, 8	
1.4 Uses of Dynamic Models, 9	
1.5 Linear and Nonlinear Systems, 10	
1.6 Automated Simulation, 11	
References, 12	
Problems, 13	
2 Multiport Systems and Bond Graphs	16
2.1 Engineering Multiports, 16	
2.2 Ports, Bonds, and Power, 23	
2.3 Bond Graphs, 26	
2.4 Inputs, Outputs, and Signals, 28	
Problems, 31	
3 Basic Component Models	34
3.1 Basic 1-Port Elements, 34	
3.2 Basic 2-Port Elements, 46	
3.3 The 3-Port Junction Elements, 52	
3.4 Causality Considerations for the Basic Multiports, 58	
3.4.1 Causality for Basic 1-Ports, 58	
3.4.2 Causality for Basic 2-Ports and 3-Ports, 60	
3.5 Causality and Block Diagrams, 61	

- 3.6 Pseudo–Bond Graphs and Thermal Systems, 63
- Reference, 67
- Problems, 67

4 System Models

73

- 4.1 Electrical Systems, 74
 - 4.1.1 Electrical Circuits, 74
 - 4.1.2 Electrical Networks, 79
- 4.2 Mechanical Systems, 85
 - 4.2.1 Mechanics of Translation, 85
 - 4.2.2 Fixed-Axis Rotation, 94
 - 4.2.3 Plane Motion, 99
- 4.3 Hydraulic and Acoustic Circuits, 114
 - 4.3.1 Fluid Resistance, 114
 - 4.3.2 Fluid Capacitance, 117
 - 4.3.3 Fluid Inertia, 122
 - 4.3.4 Fluid Circuit Construction, 124
 - 4.3.5 An Acoustic Circuit Example, 127
- 4.4 Transducers and Multi-Energy-Domain Models, 128
 - 4.4.1 Transformer Transducers, 129
 - 4.4.2 Gyrator Transducers, 131
 - 4.4.3 Multi-Energy-Domain Models, 133
- References, 136
- Problems, 136

5 State-Space Equations and Automated Simulation

155

- 5.1 Standard Form for System Equations, 158
- 5.2 Augmenting the Bond Graph, 161
- 5.3 Basic Formulation and Reduction, 167
- 5.4 Extended Formulation Methods—Algebraic Loops, 175
 - 5.4.1 Extended Formulation Methods—Derivative Causality, 180
- 5.5 Output Variable Formulation, 188
- 5.6 Automated and Nonlinear Simulation, 190
 - 5.6.1 Nonlinear Simulation, 190
 - 5.6.2 Automated Simulation, 193
- Reference, 199
- Problems, 199

6 Analysis of Linear Systems

209

- 6.1 Introduction, 209
- 6.2 Solution Techniques for Ordinary Differential Equations, 210

6.3	Free Response and Eigenvalues, 213	
6.3.1	A First-Order Example, 213	
6.3.2	Second-Order Systems, 217	
6.3.3	Example: The Undamped Oscillator, 222	
6.3.4	Example: The Damped Oscillator, 227	
6.3.5	The General Case, 231	
6.4	Forced Response and Frequency Response Functions, 234	
6.4.1	Normalization of Response Curves, 244	
6.4.2	The General Case, 247	
6.5	Transfer Functions, 249	
6.5.1	Block Diagrams, 250	
6.6	Total Response, 252	
6.7	Alternative State Variables, 255	
	References, 257	
	Problems, 257	
7	Multiport Fields and Junction Structures	267
7.1	Energy-Storing Fields, 267	
7.1.1	<i>C</i> -Fields, 268	
7.1.2	Causal Considerations for <i>C</i> -Fields, 274	
7.1.3	<i>I</i> -Fields, 281	
7.1.4	Mixed Energy-Storing Fields, 289	
7.2	Resistive Fields, 290	
7.3	Modulated 2-Port Elements, 294	
7.4	Junction Structures, 298	
7.5	Multiport Transformers, 299	
	References, 304	
	Problems, 305	
8	Transducers, Amplifiers, and Instruments	311
8.1	Power Transducers, 312	
8.2	Energy-Storing Transducers, 320	
8.3	Amplifiers and Instruments, 324	
8.4	Bond Graphs and Block Diagrams for Controlled Systems, 331	
	References, 336	
	Problems, 337	
9	Mechanical Systems with Nonlinear Geometry	350
9.1	Multidimensional Dynamics, 351	
9.2	Kinematic Nonlinearities in Mechanical Dynamics, 359	
9.2.1	The Basic Modeling Procedure, 360	
9.2.2	Multibody Systems, 371	

9.2.3	Lagrangian or Hamiltonian <i>IC</i> -Field Representations, 377	
9.3	Application to Vehicle Dynamics, 383	
	References, 389	
	Problems, 390	
10	Distributed-Parameter Systems	405
10.1	Simple Lumping Techniques for Distributed Systems, 406	
10.2	Lumped Models of Continua through Separation of Variables, 417	
10.3	General Considerations of Finite-Mode Bond Graphs, 433	
10.4	Assembling Overall System Models, 442	
10.5	Summary, 444	
	References, 444	
	Problems, 446	
11	Magnetic Circuits and Devices	453
11.1	Magnetic Effort and Flow Variables, 453	
11.2	Magnetic Energy Storage and Loss, 458	
11.3	Magnetic Circuit Elements, 462	
11.4	Magnetomechanical Elements, 465	
11.5	Device Models, 468	
	References, 476	
	Problems, 477	
12	Thermofluid Systems	481
12.1	Basic Thermodynamics in Bond Graph Form, 481	
12.2	Heat Transfer in True Bond Graphs and Pseudo-Bond Graphs, 487	
12.2.1	A Simple Example, 490	
12.2.2	An Electrothermal Resistor, 492	
12.3	Fluid Dynamic Systems, 494	
12.3.1	One-Dimensional Incompressible Flow, 498	
12.3.2	Representation of Compressibility Effects, 502	
12.3.3	Inertial and Compressibility Effects in One-Dimensional Flow, 505	
12.4	Pseudo-Bond Graphs for Compressible Gas Dynamics, 507	
12.4.1	The Thermodynamic Accumulator, 508	
12.4.2	The Isentropic Nozzle, 512	
12.4.3	Constructing Models with the Thermodynamic Accumulator and Isentropic Nozzle, 515	
12.4.4	Summary, 517	
	References, 519	
	Problems, 519	

13 Nonlinear System Simulation	526
13.1 Explicit First-Order Differential Equations,	526
13.2 Differential Algebraic Equations Caused by Algebraic Loops,	530
13.3 Implicit Equations Caused by Derivative Causality,	534
13.4 Automated Simulation of Dynamic Systems,	538
13.4.1 Sorting of Equations,	538
13.4.2 Implicit and Differential Algebraic Equation Solvers,	539
13.4.3 Icon-Based Automated Simulation,	540
13.5 Example Nonlinear Simulation,	541
13.5.1 Some Simulation Results,	545
13.6 Conclusions,	548
References,	549
Problems,	549
Appendix	555
Index	557
