Rheology Essentials of Cosmetic and Food Emulsions

 Springer

Table of Contents

1	INTRODUCTION	1
2	A TRIP BACK IN TIME	5
3	SKIN AND ITS CARE	15
4	EMULSIONS – SOME THEORETICAL ASPECTS	17
4.1	Physicochemical Structure of Cosmetic Products	17
4.2	Modern Emulsifiers	19
4.3	Skin Care and Cleansing	19
4.4	Microemulsions	19
4.5	Emulsifier-Free Products	20
4.6	Production of Emulsions	21
4.7	Processes Occurring During Emulsification	21
4.8	Serrated Disc Disperser	22
5	BASIC PHYSICAL AND MATHEMATICAL PRINCIPLES	25
5.1	Important Definitions	25
5.2	One-Dimensional Parallel Plates Model	28
5.3	Parallel Plate Measuring System	30
5.4	Cone-Plate Measuring System	31
5.5	Coaxial Cylinder Systems	32
5.6	Double Gap Measuring System	35
5.7	Flow Through Circular Capillary	36
5.8	Correction Methods	38
5.8.1	PP Measurement System	39
5.8.2	Cylinder Measurement Systems	39
5.8.3	Circular Capillaries	39
5.9	Deformation and Relaxation	40
5.10	Thixotropy and Rheopexy	43
5.11	Vibration or Oscillation Measurements	44
5.11.1	Steady and Dynamic Stress	45
5.11.2	Ideal Elastic Solids	46
5.11.3	Ideal Viscous Fluids	46
5.11.4	Real Solids	47
5.11.5	Complex Representation	48

6	MEASURING INSTRUMENTS	51
6.1	Modern Rheometer	52
6.2	High Shear Rheometer	54
6.3	Standard Viscometer	55
6.4	Often Used Viscometer	56
6.5	Automatic Sampler	57
6.6	In-process In-/On-line Viscosity Measurements	58
6.7	Future Prospects	61
7	MOST IMPORTANT TEST METHODS	63
7.1	Stress Ramp Test	65
7.2	Newtonian Flow Behavior	67
7.3	Creep Test and Creep Recovery	67
7.4	The Ideal Elastic Behavior	68
7.5	The Ideal Viscous Behavior	68
7.6	Real Viscoelastic Behavior	69
7.7	Steady Flow Curve	69
7.8	Amplitude Dependence	71
7.9	Structure Breakdown and Build Up	73
7.10	Time Dependence	74
7.11	Frequency Test	75
7.12	Temperature Dependence	76
7.13	Combined Temperature-Time Test	77
8	ANALYSIS OF MEASURING RESULTS AND CORRELATIONS WITH OTHER TESTS	81
8.1	Yield Stress	81
8.1.1	Correlations of the Yield Stress with the Primary Skin Feel	82
8.1.2	Optimization of the Stress Ramp Test	83
8.1.3	Residue Emptying	85
8.1.4	Energy Input	87
8.1.4.1	Measurement of the Energy Input	88
8.1.5	Droplet Sizes and their Distribution	90
8.1.6	Pumpability of Cosmetic Emulsions	92
8.1.6.1	Estimation of the Maximum Shear Rate	93
8.1.6.2	Calculation of the Shear Stress	94
8.1.7	Stability Studies Using Yield Stress Measurements	95
8.1.8	Results Obtained	96
8.2	Steady Flow	97
8.2.1	Determination of the Measuring Time	97
8.2.2	Temperature Dependence of the Dynamic Viscosity	98
8.2.3	Secondary Skin Feel	99
8.2.3.1	Investigation of the Secondary Skin Feel	100
8.3	Oscillatory Measurements	101
8.3.1	Temperature Dependence of the Moduli	106

8.3.2	Temperature Stability	110
8.3.3	Rheological Swing Test for Temperature Stability	112
8.4	Time Temperature Superposition (TTS)	117
8.4.1	Softening Point	118
8.4.2	Freezing Point	118
8.4.3	Determination of the Master Curve at Constant Frequency	118
8.4.3.1	Determination of the Activation Energy via the Temperature	119
8.4.3.2	Viscosity	119
8.4.3.3	Arrhenius Equation	120
8.4.3.4	WLF Equation	122
8.4.3.5	First Conclusion	122
8.4.3.6	Determination of the Master Curve with Variable Frequency	123
8.4.3.7	Final Conclusion	124
9	INTERPRETATION	125
9.1	Relationships for Polymers	125
9.2	General Statements for Cosmetic Emulsions	127
10	CALIBRATION/VALIDATION	131
10.1	Basic Principles of Statistical Analysis	133
10.1.1	Normal Distribution (Gaussian Distribution)	133
10.1.2	Mean Value	134
10.1.3	True Value	135
10.1.4	Standard Deviation and Variance	135
10.1.4.1	Standard Deviation	136
10.1.4.2	Coefficient of Variation	136
10.1.5	Measured Value, Result, Random Variable	136
10.1.6	Population, Series, Measured Value	137
10.1.7	Errors and Deviations	137
10.1.7.1	Error Types	137
10.1.8	Precision	138
10.1.9	Accuracy	139
10.1.10	Trueness	139
10.1.11	Repeatability	139
10.1.12	Reproducibility	140
10.1.13	Outliers	140
10.2	Back to the Laboratory	140
10.2.1	Calibration Test for Oscillatory Measurements	143
10.2.2	Temperature	145

11	TIPS AND TRICKS	147
11.1	Materials for Geometric Systems	147
11.2	Cone-plate	147
11.3	Parallel Plate	148
11.4	Cylinder Systems	148
11.5	Cleaning Measuring Systems	148
11.6	Measurement Artifacts	149
11.7	Filling of Cone-plate and Parallel Plate Measuring Systems	150
11.8	Interpretation	152
12	DEFINITION OF COSMETICS	155
12.1	Cosmetics vs. Drugs	155
12.2	Production of Cosmetic Products	155
12.3	Naming, Trademark Law, Patents Law	156
12.4	Marketing of Cosmetic Products	156
12.5	Advertising Cosmetic Products	157
12.6	Comments	160
13	EXCURSION IN THE WORLD OF FOOD RHEOLOGY	161
13.1	A Short History of Food Rheology	161
13.1.1	The Origins of Food Rheology	163
13.2	Honey	163
13.3	Sandwich Spreads	164
13.4	Cheese	165
13.5	Ketchup	165
13.6	Yoghurt	166
13.7	Marzipan	166
13.8	Starch	168
13.9	Foams	169
13.10	Chocolate	170
13.11	Psychorheology	170
14	LIST OF REFERENCES	173
15	SUBJECT INDEX	177
