

# Introductory Applied Quantum and Statistical Mechanics

*Peter L. Hagestein  
Stephen D. Senturia  
Terry P. Orlando*

# Contents

|                     |    |
|---------------------|----|
| <i>Introduction</i> | ix |
|---------------------|----|

## *Part I Foundations*

|   |                                                               |    |
|---|---------------------------------------------------------------|----|
| 1 | <i>Particles and Waves</i>                                    | 1  |
| 2 | <i>Probability Amplitudes</i>                                 | 13 |
| 3 | <i>The Origins of Quantum Mechanics</i>                       | 29 |
| 4 | <i>The Schrödinger Equation and Wave Packet Solutions</i>     | 43 |
| 5 | <i>Operators, Expectation Values, and Ehrenfest's Theorem</i> | 65 |

## *Part II The Time-Independent Schrödinger Equation*

|   |                                          |     |
|---|------------------------------------------|-----|
| 6 | <i>Eigenfunctions and Eigenvalues</i>    | 89  |
| 7 | <i>Piecewise Constant Potentials: I</i>  | 111 |
| 8 | <i>Piecewise Constant Potentials: II</i> | 139 |

*Part III The Simple Harmonic Oscillator*

|    |                                                                      |     |
|----|----------------------------------------------------------------------|-----|
| 9  | <i>The Simple Harmonic Oscillator I</i>                              | 165 |
| 10 | <i>The Simple Harmonic Oscillator II: Operators</i>                  | 187 |
| 11 | <i>The Simple Harmonic Oscillator III:<br/>Wave Packet Solutions</i> | 203 |
| 12 | <i>The Quantum LC Circuit</i>                                        | 223 |

*Part IV Useful Approximations*

|    |                                                             |     |
|----|-------------------------------------------------------------|-----|
| 13 | <i>Overview of Approximation Methods for Eigenfunctions</i> | 247 |
| 14 | <i>The WKB Approximation</i>                                | 253 |
| 15 | <i>The Variational Method</i>                               | 275 |
| 16 | <i>Finite-Basis Approximation</i>                           | 287 |

*Part V The Two-Level System*

|    |                                                                    |     |
|----|--------------------------------------------------------------------|-----|
| 17 | <i>The Two-Level System with Static Coupling</i>                   | 307 |
| 18 | <i>The Two-Level System with Dynamical Coupling</i>                | 327 |
| 19 | <i>Coupled Two-level System and Simple<br/>Harmonic Oscillator</i> | 353 |

*Part VI Quantum Systems with Many Degrees of Freedom*

|    |                                                                 |     |
|----|-----------------------------------------------------------------|-----|
| 20 | <i>Problems in More than One Dimension</i>                      | 371 |
| 21 | <i>Electromagnetic Field Quantization I: Resonator Fields</i>   | 397 |
| 22 | <i>Electromagnetic Field Quantization II: Free-Space Fields</i> | 419 |
| 23 | <i>The Density of States</i>                                    | 445 |
| 24 | <i>The Golden Rule: The Calculation of Transition Rates</i>     | 467 |

*Part VII Statistical Mechanics*

|                                                                       |            |
|-----------------------------------------------------------------------|------------|
| <i>25 Basic Concepts of Statistical Mechanics</i>                     | <i>501</i> |
| <i>26 Microscopic Quantum Systems in Equilibrium with a Reservoir</i> | <i>519</i> |
| <i>27 Statistical Models Applied to Metals and Semiconductors</i>     | <i>545</i> |

*Part VIII Hydrogen Atom, Helium Atom, and Molecular Hydrogen*

|                                                                                             |            |
|---------------------------------------------------------------------------------------------|------------|
| <i>28 The Hydrogen Atom I: The Classical Problem</i>                                        | <i>565</i> |
| <i>29 The Hydrogen Atom II: The Quantum Problem</i>                                         | <i>577</i> |
| <i>30 The Hydrogen Atom III: Applications</i>                                               | <i>607</i> |
| <i>31 Two-Electron Atoms and Ions</i>                                                       | <i>629</i> |
| <i>32 Molecular Hydrogen I: <math>H_2^+</math> and <math>H_2</math> Electronic Orbitals</i> | <i>651</i> |
| <i>33 Molecular Hydrogen II: Vibrational and Rotational States</i>                          | <i>671</i> |

*Part IX Appendices*

|                                                                     |            |
|---------------------------------------------------------------------|------------|
| <i>Appendix A Gaussian Integrals</i>                                | <i>695</i> |
| <i>Appendix B The Fourier Transform of a Plane Wave</i>             | <i>699</i> |
| <i>Appendix C The Probability Flux</i>                              | <i>701</i> |
| <i>Appendix D Cascaded Matrix Method</i>                            | <i>703</i> |
| <i>Appendix E The Creation Operator Raises the Index</i>            | <i>705</i> |
| <i>Appendix F Canonical Quantization</i>                            | <i>707</i> |
| <i>Appendix G Wave Packet Incident on a "Gentle" Potential Step</i> | <i>711</i> |
| <i>Appendix H The WKB Representation for Allowed Regions</i>        | <i>717</i> |
| <i>Appendix I The WKB Representation for Forbidden Regions</i>      | <i>721</i> |

|                                                                               |     |
|-------------------------------------------------------------------------------|-----|
| <i>Appendix J Matrix Elements for the Quartic Well</i>                        | 723 |
| <i>Appendix K Normalization and the Unity Operator</i>                        | 725 |
| <i>Appendix L The Density Operator and Density Matrix</i>                     | 727 |
| <i>Appendix M The Two-Level System Hamiltonian</i>                            | 733 |
| <i>Appendix N Thinking about Dirac Notation</i>                               | 735 |
| <i>Appendix O Coordinate Rotation and the<br/>Two-dimensional SHO</i>         | 737 |
| <i>Appendix P Conservation Law for the<br/>Electromagnetic Energy Density</i> | 739 |
| <i>Appendix Q The Grand Partition Function</i>                                | 743 |
| <i>Appendix R Analytic Results for Metal Properties</i>                       | 745 |
| <i>Appendix S Saha Equilibrium for a Hydrogen Plasma</i>                      | 751 |
| <i>Appendix T Nuclear Magnetic Resonance</i>                                  | 757 |
| <i>Appendix U The Atomic Force Microscope</i>                                 | 763 |
| <i>Appendix V The Heisenberg Picture</i>                                      | 767 |
| <i>References</i>                                                             | 771 |
| <i>Index</i>                                                                  | 775 |
