

# Posttranslational Modification of Proteins

EXPANDING NATURE'S INVENTORY

Christopher T. Walsh

# Contents

Preface	xv
Reviewers	xix
The Author	xxi

## **1 Introduction 1**

Protein Translation and Posttranslational Modification	1
Diversity by Posttranslational Modification	6
Scope of Posttranslational Modifications	10
Electrophilic Cosubstrates Used for Protein Posttranslational Modifications	15
Functional Consequences of Protein Posttranslational Modifications	17
Reversible vs Irreversible Posttranslational Modification of Proteins	21
Methods for Detection of Protein Posttranslational Modifications	24
Organization and Framework of This Book	27

## **2 Protein Phosphorylation by Protein Kinases 35**

The Special Utility of the Phosphate Group: Structure, Thermodynamics, and Mechanisms	40
Structural Basis for Control of Protein Conformation by Phosphorylation	43
Domains Dedicated to Recognition of Phosphoproteins	45
Detection of Protein Phosphorylation: The Phosphoproteome	47
Serine/Threonine Kinase Action	52
Substrate Specificity	52
Kinase Subfamilies and Regulatory Strategies for Catalytic Domain Activation	54
Parallel Cascades of Kinases	59

- Protein Anchors and Adaptors in Phosphoprotein Signaling 60
- Transmembrane Serine Kinases 62
- Tyrosine Kinase Action 62
  - Histidine Kinases and Phosphoaspartate Response Regulators 67
- Turning “Off” Protein Kinase Signaling 70
- Phosphoprotein Phosphatases 71
- Protein Serine Phosphatases 73
- Dual Specificity Phosphoprotein Phosphatases 74
- Protein Tyrosine Phosphatases 74
- 3 Sulfuryl Transfers: Action of Protein Sulfotransferases and Aryl Sulfatases 81**
  - Tyrosyl Protein Sulfotransferases (TPSTases) 82
  - Aryl Sulfatases 87
- 4 Modifications of Cysteine and Methionine by Oxidation–Reduction 95**
  - Thiol to Disulfide: Oxidations, Reductions, and Disulfide Bond Isomerizations 99
  - Thioredoxin Reductase versus Glutathione Reductase: S–Se versus S–S 106
  - Peroxiredoxins 107
  - OxyR and OhrR: Transcription Factors as Redox Sensors by Thiol Oxidation 110
  - S-Nitrosylation of Proteins 113
  - O-Nitration of Tyrosyl Residues in Proteins 113
  - Methionine Sulfoxide Formation and Reduction 114
  - Cysteine Participation in Protein Thioether Formation 115
  - Thiopeptide Linkage in Methyl CoM Reductase 117
- 5 Protein Methylation 121**
  - Protein O-Methylation 125
    - Chemotaxis Receptor Protein Glutamate Carboxy Methyltransferase 125
    - Ras Carboxy Terminal Methyltransferase 128
    - Aspartate Carboxy Methyltransferase in Aging Protein Repair: Protein Isoaspartyl Methyltransferase (PIMT) 128
  - Protein N-Methylation 132
    - Lysine N-Methylation 133
    - Arginine N-Methylation 139

- Histidine N-Methylation 141
- Glutamine and Asparagine N-Methylation 141
- Protein C-Methylation 143
  - Methyl CoM Reductase: S-, N-, and C-Methylation 143
  - Removal of N-Methyl Groups in Proteins by Deimination of MethylArg or Deamination of MethylLys Residues 145
- 6 Protein N-Acetylation 151**
  - N-Terminal Acetylation of Eukaryotic Proteins 152
  - N-Acetylation of Lysine- $\epsilon$ -NH<sub>2</sub> Side Chains 154
  - Histone Acetyltransferases: Families of HATs 158
  - HATs and FATs 162
  - Histone Deacetylases (HDACs) and Sirtuins 164
    - HDACs 164
    - Sirtuins 165
- 7 Protein Lipidation 171**
  - Glycosyl Phosphatidylinositol (GPI) Anchored Proteins 176
  - Protein N-Myristoylation 182
  - Protein S-Palmitoylation 186
  - Protein S-Isoprenylation 190
- 8 Proteolytic Posttranslational Modification of Proteins 203**
  - Classification of Proteases 207
  - Proteases in Prokaryotic Cells: The Quality Control Inventories and Secretory Functions 211
  - Proteasomes and Lysosomes: Sequestration and Degradation 216
  - Proteases in Eukaryotic Cells: The Challenges of the Secretory Pathways 220
  - Signal Peptidase 221
  - Proprotein Convertases and Protein Maturation 222
  - Coupled Ectodomain Shedding and Regulated Intramembrane Proteolysis 225
  - Protease Cascades in Development 230
  - Apoptotic Cascades and Caspase Regulation 234
- 9 Ubiquitin and Ubiquitin-like Protein Tags 243**
  - Ubiquitin and Ubl-Activating Enzymatic Machinery: E<sub>1</sub> and E<sub>2</sub> Ligases 248
  - Families of E<sub>3</sub> Ligases Recognizing Different Partner Proteins 252

- Recognition of Ubiquitin and Ubl Domains for Protein Trafficking and Sorting in the Cell 258
- Proteins Marked for Ubiquitylation and Proteasomal Destruction During the Cell Cycle 261
- Reversibility of Ubiquitylation and Ubl-Tagging 263
- Monoubiquitylation of Membrane Proteins During Endocytosis 266
- Small Ubiquitin-like Modifier (SUMO) 269
- Ubiquitylation and Other Posttranslational Modifications of the Same Proteins 272
- The Beginnings of a Proteomics Approach to Define the Full Range of Ubiquitylated and Ubl-Modified Proteins 275
- 10 Protein Glycosylation 281**
- Structural Challenges for the Determination of the Carbohydrate Modifications in Proteins 286
- N-Linked Glycoproteins 291
- Assembly of the Glc<sub>3</sub>Man<sub>9</sub>GlcNAc<sub>2</sub>-PP-dolichol Donor 294
- Oligosaccharyltransferase (OSTase): The Gatekeeper to the N-Glycoprotein Modification Pathway 296
- Hydrolytic Trimming of the Glc<sub>3</sub> Tail in the ER Lumen: Cycles of Deglycosylation/Reglycosylation and Protein Quality Control 298
- Trimming and Elongation of the Oligosaccharyl Chains in the Golgi Complex 302
- O-Glycosylation of Proteins 305
- O-Glycosylation of Rho and Ras Family GTPases by Clostridial Toxins 309
- Protein C-Glycosylation 311
- An Approach to Cotranslational Synthesis of Glycoproteins 312
- 11 ADP-Ribosylation of Proteins from NAD as Donor 317**
- Posttranslational Formation of Diphthamide in Elongation Factor 2 and Its ADP-Ribosylation 321
- Cholera Toxin and Related Toxins that Catalyze ADP-Ribosylations of an Arginine Residue in the Alpha Subunit of the Trimeric GTPase G<sub>s</sub> or G<sub>i</sub> 323
- ADP-Ribosylation of a Cys Residue in a Mammalian Target Protein 325
- Clostridium botulinum* Toxin C3: ADP-Ribosylation of Asn<sub>41</sub> of Rho GTPases 326

- ADP-Ribosyltransferases in Eukaryotic Cells 327
- Additional Bacterial Toxins with Catalytic Activity Towards the Ras Superfamily of GTPases 328
- 12 Posttranslational Hydroxylation of Proteins 331**
- Nature of Protein Hydroxylation Reactions 334
- Structure and Function of the Protein Hydroxylases 337
- Collagen Processing 338
- Oxygen Sensing 341
- 13 Protein Automodification Reactions 349**
- Autophosphorylation of Protein Kinases 350
- Auto-ADP-Ribosylation 352
- Automodification of Aromatic Side Chains of Proteins by Oxidation 358
- Automodification of the Peptide Backbone in Proteins 366
- Autocyclization of a Peptidyl Triad in Histidine Ammonia Lyase and Phenylalanine Ammonia Lyase to Create the Active Form of the Catalyst 367
- Autocyclization of a Peptidyl Triad to Create the Fluorophore in Green Fluorescent and Red Fluorescent Chromoproteins 371
- A Different Route to a Posttranslationally Modified Photoactive Yellow Protein 377
- Autocleavage Reactions of Peptide Bonds in Proteins 378
- Autocleavage of a Peptide Bond to Release the Catalytic N-Terminal Nucleophile 381
- Autocleavage of a Peptide Bond,  $\beta$ -Elimination, and Generation of a Pyruvoyl Prosthetic Group for Amino Acid Decarboxylation 385
- Autocleavage of a Peptide Bond and Acyl Transfer to Cholesterol for Membrane Localization and Signaling 391
- Autocleavage of Peptide Bonds, Excision, and Religation: Protein Splicing 392
- 14 Swinging Arms for Biotin, Lipoate, and Phosphopantetheine Tethering to Proteins 405**
- Biotin-Dependent Carboxylases 408
- Lipoyl-Dependent  $\alpha$ -Keto Acid Dehydrogenases 412
- Phosphopantetheinylated Carrier Proteins in Acyl and Peptidyl Transfers 420
- Fatty Acid Synthases (FAS) 420

Polyketide Synthases (PKS)	424
Nonribosomal Peptide Synthetase (NRPS) Assembly Lines	429
Summary	432

## 15 Protein Carboxylation and Amidation 435

Protein Carboxylations	437
N-Carboxy Protein Adducts	437
C-Carboxy Protein Adducts via Vitamin $\text{KH}_2$ and $\text{O}_2$	438
Enzymatic Posttranslational Transamidations and Competing Hydrolyses	445
Amidations	451
Tandem Modifications of N-Glutamyl and C-Glycyl Termini During Maturation of a Peptide Hormone	454
Protein Circularizations	455
Posttranslational Modifications at the C-Terminal Tails of $\alpha$ - and $\beta$ -Tubulin Subunits	457

## 16 Diversification of Proteomes 461

The Range of Covalent Posttranslational Modifications	461
Cleavages, Autocleavages, and Religations	464
Covalent Protein Tags	465
Tandem Modifications	466
Cotranslational Modifications and the 21st and 22nd Amino Acids	470
Prospects for Expanding the Genetic Code: 23rd to <i>n</i> th Proteinogenic Amino Acid	471

Index	477
